Not true. Not enough frequencies available. What needed to have been done was a wider allocation of public-safety only bandwidth, and move commercial radio elsewhere in the spectrum.

> Also the whole issue
> of being digital is causing a whole host of problems, most noticeably
> the distortion of the voices.

Was *BAD* last night. Several TCSO-Baker units mentioned it, as did Baker dispatch.

> again, analog which would have been a much better choice.

Agreed, especially with the topology of the area. The only upside to digital that seems worth it is the one Austin isn't going to use any time

soon - encryption.

> San Antonio got so fed up that they are changing over to a whole new
> system. Dallas Fire, tried 800 Mhz and gave it back and said no way.

Yep. Wide range of signal issues in Dallas. NOT pretty... but they tested it WELL and planned ahead for interop. The Austin interop story is "you want to interop, buy new radios." For smaller agencies, this is a large financial hit. Oh, yeah, they have to pay royalties, too... I forgot about that.

> and give feedback. There has been a huge lack of communication
> (ironically) with the new system. There are blanks of talkgroups that
> are available for intersystem coordination like Law 1-5, Interop A-H,
> Blue 9-16 and Red 4-8 but no one I have talked to knows what any of
> these are supposed to be used for and they are all scared to use them
> because they think it's using someone else's channels.

Or, worse yet, get told specifically NOT to use them as they've never been able to in the past and haven't put the forethought into integration issues, so they're staying away.

Wise saying: "People will resist change until the pain of staying the same outweighs the pain of changing."

Mike :)

2108. RE: [CenTexComm] if Austin had done UHF trunking would there be enough frequencies?

Yahoo group: CenTexComm
Date: 2004-02-02 11:32:35 UTC
From: Michael Schadone
Topic: 2106 Message: 2108

Robert,

There still would have had to be some changes to existing towers and added towers across the county. The issue is that this radio package was voted on and approved years ago as a special spending package to improve public safety communications in the City. Once the voters approve something, it's very difficult to deviate too much from it.

Mike

Subject: [CenTexComm] if Austin had done UHF trunking would there be enough frequencies?

The City and County could have run a trunked system on their existing UHF channels which outnumber the frequencies used on Simulcast sites. The advantage to these, is that they would not have had to have towers all over the city.

460.025, 460.05, 460.100, 460.150, 460.175, 460.200, 460.275, 460.325, 460.375, 460.400, 460.450, 460.475, 460.500, 460.875 453.100, 453.275, 453.150, 453.450, 453.500, 453.675, 453.775, 453.900,
453.200, 453.225, 453.325, 453.525, 453.55, 453.575, 453.600, 453.625, 453.700, 453.725, 453.800,
453.85, 453.875, 453.925, 453.975. These do not even include all the UHF split frequencies and the ones that were licensed to EMS such as 462.975 462.950 463.000 463.025 463.050 463.075 463.100 463.125 463.150 463.175

Topic: 2109 Message: 2110

We can surely keep the Pro-96 / BC296D discussion on here as long as it relates to Austin since that's what we're trying to monitor. It seems like Wes and I are the only ones that have added talkgroups on www.trunkedradio.net Does anyone else have these radios in the Austin area and has anyone found any other talkgroups.. I do encourage you to post what you have.

2115. Bastrop

Yahoo group: CenTexComm
Date: 2004-02-05 15:25:42 UTC
From: Jose Esqueda
Topic: 2115 Message: 2115

I spoke to a contact at the Bastrop Sheriff Office. I asked about the new talk groups that we are seen in the system. Smithville, Elgin and City of Bastrop are slowly switching to their trunk system. They will get 7 talk groups each. The city of Bastrop police department has switch over fully. Elgin will drop the 900 Mhz completely.

2116. RE: [CenTexComm] Bastrop and why we need a list of the talkgroups.. so we won't call every 20 mins

From: Robert Barker
Topic: 2115 Message: 2116

Any way we can get a list of the talkgroups that will be on the Bastrop system? It is such a pain to try and ID this stuff but we know we will get it eventually. I mean we will hear them if they talk so by not giving us the information, it□s not like we are not gonna hear them. It seems like it would benefit them to let us know what is the real deal. Otherwise they may be doing some sort of training exercise (pursuit or SWAT training) and we hear it and don□t know if it□s real or training. We□re getting that now with the city of Austin, not knowing what agency we are listening to.

2118. BC296D is a bit cheaper

Yahoo group: CenTexComm
Date: 2004-02-06 23:10:57 UTC
From: Robert
Topic: 2118 Message: 2118

BC296D is $519.95 (including shipping) http://www.usascan.com/files/bc296d.cfm
or $519 +$9 shipping or I think free shipping w/check.
http://www.bearcat1.com/item0058.htm.

We do know that the BC296D is upgradeable since they already released that update program to run and install. I'm still getting lots of distortion on my handheld. Last night I was able to check out a BC796D Base model and it was working much better than my handheld. It had a sound setting of 533 as did my handheld. The BC296D comes with limited software that does allow you to watch it scan on your computer screen so as not having to look at the scanner display. It also lets you put in the frequencies and alpha tag them and then download them onto the scanner.. It takes about 20 seconds to program a Pro-96 and 10 minutes to program a BC296D by computer download.

2120. Firecom Tac Blue 7, AFD Firecom and Blue 5, Carnaval, 4th street Convention Center, Carnaval, CMT

Yahoo group: CenTexComm
Date: 2004-02-08 22:00:53 UTC
From: Robert
Topic: 2120 Message: 2120

Austin EMS told a unit to respond on Tac Blue 7 awhile ago, about 3pm Sunday. .. I never heard them on it but that's what they said. This is very odd because AFD Firecom 7 is 453.275 which is not (yet) simulcast on the 800 system and I have never heard that talkgroup used before.

I do not know why AFD Alarm 5 is simulcast on 1122 when there is already another talkgroup for Blue 5 (1375) but it is not used. For those without a digital scanner. Only Firecom 1-5 are simulcast on the 800 system. AFD is still not transmitting on 800.. they are still using UHF radios and The station pages from 453.275 are not being retransmitted on the 800 system.

Last night they opened 4th street in front of the Convention Center just in time for the drunks to take over. Some interesting chatter on talkgroup 428 which I'll update as the Convention Center security of drunks urinating behind the chillers and stuff. Security was not amused but just watched them and talked about them. Also for Carnaval @ Palmer Auditorium, they were on talkgroup 446. At about 1:30am there was a huge crowd in the Hyatt Regency parking lot and they had to call units from Baker, Charlie, David, and Henry sectors to clear the parking lot and maintain order. Expect to hear a lot more of that and the CMT (Crowd Management Teams) as they gear up for Mardi Gras.

2124. Possible SNOW and Freezing Roadways Friday night to Saturday Morning

Yahoo group: CenTexComm
Date: 2004-02-13 06:02:18 UTC
From: Robert
Topic: 2124 Message: 2124

I looked up last years posting and this is what I had:

TxDOT sand trucks were active on Loop 360 in Austin on 47.08 MHz.

At night, the best radio traffic was from the TxDot crews on the LCRA 900 system talkgroup 10-035 they are non-stop talking and very funny to listen to.

Also hearing traffic on the LCRA system with TxDOT Courtesy patrol on 10-037

<http://www.trunkedradio.net/modules.php?name=TRSDB&sid=48&d=trsinfo&opt=all_tg>

1309 10-035 TXDOT Austin Road Crews CH-1
1310 10-036 TXDOT Austin Road Crews CH-2
1311 10-037 TXDOT Austin Courtesy Patrol

1345 10-081 TxDOT Williamson County Road Crews
1349 10-085 TXDOT Operations

Travis Co Road crews were on 156.195

City of Austin Sand trucks should be on 155.760 and 154.965

Utilities were on 451.075 I guess but also check 451.125 for car to car. They are also using the new Austin Digital System.
<http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2&d=trsinfo&opt=all_tg>

47.020 TxDOT

47.060 TxDOT

47.080 TxDOT

47.120 TxDOT

47.180 TxDOT (Base/mobile)

2126. 296 vs 96 in Austin. Do we have a winner?

Yahoo group: CenTexComm
Date: 2004-02-14 06:30:29 UTC
From: me
Topic: 2126 Message: 2126

Hey guys, I've been following the threads by a few of you (Robert, John, Wes, etc) regarding the 296 vs 96 debate. From what I've gathered the 296 is still not doing that great on the main sites and no one seems to have a pro-96 with the upgrade (from what I've read in the recent past, here and on trunkedradio.net).
I have just picked me up a pro-96 and have done the upgrade. I'm somewhat curious myself to see if the pro-96 can handle it. I had my 250d over there once a few months ago and it didn't like the cqpsk.
I get over to Austin a few times a year for various reasons anyway so a quick trip may need to be in the works. Possibly in the next week or two for part of a day. I'd be glad to meet up with you guys and have a shootout (plus there's a couple restaurants I wouldn't mind hitting while I'm there).
Sound do-able? Or has the air already been cleared on this matter?

(fyi-I posted a simliar reply message over on trunkedradio.net on the texas forum)

Henry - Southeast (separatist district that was emancipated from Frank).
The district boundaries (I believe) are Pleasant Valley (north), Congress
(west), Del Valle (east), and Stassney (south). That's the general area,
anyway.

Mike

2128. 296 vs 96 in Austin. Do we have a winner? no we don't

Yahoo group: CenTexComm
Date: 2004-02-14 13:25:32 UTC
From: Robert
Topic: 2128 Message: 2128

Sure, If you or anyone makes it to Austin with a Pro-96, give me a call and we can compare the signals .. either in person or by phone. Whatever works and I'm available in the evenings. Don't get me wrong, the BC296D works fairly well but for $500 it could be a lot better.

Woke up this morning to snow on the ground, lots of it. I think it started about 1:30am and continued until about 3am or after. Now all i'm hearing are accidents and cars sliding all over the call for sand trucks at 7:23am. TxDOT Road crews are on the LCRA 900 Mhz System. Travis County crews are on 156.195. The city may still be on 155.76 but not sure. Everyone on every channel is asking for sand trucks. DPS is on 154.680 asking for them now.

John,

I just want to throw this out there for you. The actual radios do not decode 100% of the communications. Depending where you are physically, you may hear 90% of the communications as garbled junk. This is a system issue and not a scanner issue. You are right in comparing apples to apples, though (Pro-96 to BC796D). I just don't want you going nuts trying to get perfect reception all the time.

From: Robert
Topic: 2132 Message: 2133

could someone recap to me about what problems the 296 was having
with the Austin system?

The BC296D has a lot of distortion when listening to the Austin system. Many times the sound or voices are very distorted. I have stood right beside their official radios hearing them and my scanner both, so I know that my scanner doesn't always receive every word or receive it as clearly as their radios do. I know a lot of this is digital but I know from listening to the BC796D base radio, that it can be a lot better. OK so a lot of that has to do with reception. Also their radios will work better cuz they cost $3000 each.
I also played with the Pro-96 for awhile but that was before the software upgrading making it work on the CQPSK part of the Austin System, and now that it is supposedly working, I would like to compare them side by side and see which one receives better.

You should realize that they, Police and EMS and the other users on the system are having trouble hearing each other too but not all the time.. and there are times when I flat out do not hear them at all and obviously they do cuz they keep on talking.

As far as reception, I have been able to pick up the signal from Georgetown and Kyle. Since I sometimes drive to different counties, I keep my scanner on so I can hear other agencies. But it does sound distorted(sometimes).

2136. I know the BC796D base works well and I really do like my handheld BC296D

Yahoo group: CenTexComm
Date: 2004-02-17 20:17:29 UTC
From: Trebor1159
Topic: 2136 Message: 2136

I have to say that I was impressed by the BC796D base scanner if that helps your decision any. Being in one place and locating it where it gets good reception, seems to be a lot more reliable than the handheld. Then again, if you are like me and never in one place all the time, you have to have the handheld. So having the base radio as my one and only digital scanner was not an option. I guess one thing I can say is that usually stores will let you buy and return a radio within the first 30 days so long as you bring it back in resalable condition (as new). That is what I did when the Pro-96 first came out. Someone else had it for awhile and he was kind enough to let me know he was returning it and then I played with it for 30 days and returned it. I'm tempted to go and get another one just to compare it to the BC296D that I have but I just figured someone in the Austin area would admit to having one so we can compare reception.

I can say that despite all the frustration of paying $500 for a radio that is just ok.. it's actually pretty good and I have gotten to hear a lot of good scanner traffic that I would not have otherwise heard. Oh well. who knows.

Robert,

My partner and I standing next to each other hear different communications (on the same group and without scanning), so $$$ isn't everything. There are still bugs to work out of the system.

2 SAPD Helicopter Pilots Face 'Do-Or-Die' Situation
Police Chopper Crash Lands In H-E-B Parking Lot

POSTED: 8:39 am CST February 19, 2004
UPDATED: 3:35 pm CST February 19, 2004

SAN ANTONIO -- A pair of San Antonio Police Department helicopter pilots were praised for their "textbook reaction" after they were forced to make a hard landing at an H-E-B supermarket parking lot early Thursday.

SAPD pilots Edward Ramirez, 34, and Michael Welborn, 48, were responding to a police pursuit at 2:30 a.m. when about one minute into their flight they heard several loud "bangs."

Ramirez, who was piloting the aircraft, immediately turned back toward Stinson Field, but after the aircraft lost power, the officers prepared for an emergency landing.

"Mayday! Mayday! Eagle! We're going down!" could be heard from videotape captured by the helicopter's camera.

As the helicopter was going down, Ramirez maneuvered the aircraft, without power, to avoid hitting two sets of power lines.

The helicopter eventually made a hard landing at the H-E-B grocery store parking lot on Pleasanton Road and Southwest Military Drive.

Ramirez and Welborn were able to free themselves from the aircraft and were transported to a local hospital, where they were treated and released.

"In a do-or-die situation, both the pilot and co-pilot reacted calmly and used good judgment," said San Antonio Police Chief Albert Ortiz. "Textbook reaction."

"They described it as threading the needle because he (Ramirez) had to go over one, then immediately underneath another (power line)," said San Antonio Police Department spokesman Gabe Trevino. "We had three officers (who) where on the ground ... and could hear the sputtering of the engine. They knew that the helicopter was in trouble."

The pilots were also praised for making the emergency landing less than a few hundred feet away from a residential neighborhood.

"I didn't know it was that close to home," said Lucy Espinoza, a nearby resident, who was asleep when the crash occurred.

The helicopter, which sustained extensive damage, was also involved in an emergency landing at the Alamodome in April 2003 during Fiesta.

During that incident, leaking oil spilled into the engine, creating a smoky situation.

The 1997 chopper was last inspected on Jan. 27 and maintenance checks are conducted daily and after every 25 flight hours. The engine had been overhauled and was working fine the past nine months.

The helicopter was one of four aircraft SAPD utilizes for air police support.

The Federal Aviation Administration, the National Transportation Safety Board and the San Antonio Police Department will investigate the accident.

The call the officers were responding to resulted in the arrest of a man, who was later charged with aggravated assault of a police officer, marijuana possession, driving while intoxicated and evading arrest.

2141. Radio/Scanners for sale

Yahoo group: CenTexComm

2143. Capitol Security Movie Watching Investigation Done

Yahoo group: CenTexComm
Date: 2004-02-26 17:14:38 UTC
From: Robert
Topic: 2143 Message: 2143

Capitol police are everywhere but where they need to be.
Updated 02/26/04 - 9:12 am Video Available
Capitol Security Movie Watching Investigation Done

News 36 Video

Here is the story:
* DPS Trooper <http://207.207.6.50/rmfiles/dps_ruling.ram>

A DPS inquiry into violation of department policy at the Texas Capitol is over. Back in November, KXAN found a member of the Capitol police watching movies while on duty in her car.
That trooper was supposed to be guarding the gate on the west side of the Capitol, but we found her watching movies and munching on an apple instead of keeping her eye on security. Trooper Cynthia Salinas was guarding the Texas Capitol, armed with a stack of movies and a portable DVD player in her cruiser. On that November afternoon, her supervisor defended her multi-tasking.
"As long as she's paying attention to what she's supposed to be paying attention to, she can look at that also, as long as she's not involved with that," Capitol Police Sgt. Mike Bowen said on Nov. 20, 2003.
It turns out that wasn't OK. Her punishment is a formal letter of reprimand in her permanent file stating: "This conduct on your part violates the departmental rules regarding professional conduct."
DPS officials refuse to discuss the case on camera instead issuing a brief statement that "using electronic devices, such as DVD players, on duty is unacceptable behavior."
Governor Rick Perry says troopers get the message.
"I think the Colonel looked at all the details. I trust his judgment, and I think that the real message was sent because of the investigation. The troopers understand the importance of safety around this building," Perry said.
DPS insists the building is and was secure, despite a stunning admission after our discovery last year.
"This is a highly accessible building here, and it's not as tight a security as some other buildings," Bowen said.
"Texans can know that they are as safe as possibly can be made," Perry said.
A DPS spokesman says Trooper Salinas is still assigned to the Capitol police. Bowen has voluntarily transferred out of Capitol duty, and the west gate was permanently closed as was previously planned by DPS.

2145. curious things

Yahoo group: CenTexComm
Date: 2004-02-27 01:32:04 UTC
From: D
Topic: 2145 Message: 2145

I work out at Hamilton Pool Preserve and have noticed a couple of things about the trunking system that I am curious about. I hope someone might be able to give me a answer(s).

We have great reception out our way, which I understand is largely due to having an antenna pointed directly at us. Whatever the reason, we can typically Tx/Rx from the depths of the canyon without problems. I have noticed, however, that from time to time when the handheld is scanning that i will suddenly catch the second or third part of a conversation. I don't scan a lot of talkgroups, but I do scan some. We will be sitting there and all of a sudden you will hear someone answering someone else. From that point on, we may hear the whole conversation. I wonder if that is a function of the scan, or is something else at play.

Also, we now have TC EMS County talkgroup programmed into our radios. I have noticed that I will sometimes hear a call over the old VHF radio we still have, but it will not come over the trunking system. This is even if the radio is not scanning. Here is the kicker. If I take another handheld out of the charger and turn it on TC EMS talkgroup and sit it on the desk, suddenly it and my radio will pick up TC EMS talkgroup traffic just fine. What do you think that is about?

Thanks,

Dennis Brown

2146. Re: [CenTexComm] curious things - yeah it's that bad.. reception wise

Yahoo group: CenTexComm
Date: 2004-02-27 05:34:54 UTC
From: Robert
Topic: 2146 Message: 2146

It is my understanding that the city and county are just now experiencing how bad some of these DiGiTaL radios can be. As more and more users join this system (garage collection, meter maids, street sweepers, red light and street light repair, housing authority), It is only going to get more and more crowded and it will be more of a mess. I have heard some of the reports also, of radios suddenly transmitting another agency's talkgroup. The other day, I heard an APD Baker officer say that he was unable to use his vehicle radio because, although the display was reading Baker, he was transmitting on George. I still stay that it's not too late to go back to Analog. LCRA did it and They can do it with this system. I honestly see no need for the digital system. Everyone keeps saying that it will allow the same frequency to be used north and south without interfering with each other and it allows for more use of the band, but there are plenty of frequencies in this band and they are not reusing any of the frequencies at all Perhaps some others out there that actually use these radios can give us some reports good and bad about it. I have yet to hear any I-calls (Individual Calls) on the Austin System and I'm not sure if the BC296D will do it on this Motorola System. I have heard it however, on the LCRA EDACS system.

Dennis, can you or anyone else give us a little more clarification on these talkgroups

1908 774 D TC Parks Ch 6 who uses this channel.
1911 777 D TC Parks Ch 7 - TNR Environmental What is this channel used for?

I assume TNR = Natural Resources but why would they be on that TNR Serv 1 and what channel number is that? Why is it not in the normal numbering sequence of 1-7? Is TNR Serv 1 citywide? What about TC parks Ch 5 or Parks Ch 6? What do they use TNR Environmental for? Does it have a channel number?
Are there other ones that I have not included in this list. If you or anyone else can get a hold of any of these radios and don't mind calling me or anyone else that has a scanner, we can put our radios in search mode and you could go to the channels that we do not have tagged and key up your radio, we will be able to get the talkgroup number on our scanners so we can be able to identify more of what we are hearing. It would also help if you were to want to program certain talkgroups to scan. You have to know what

they are first.
This goes for EMS too. Anyone that can help us out and would get an opportunity to go through their channels that would be great. Like I mentioned this morning, most of the unused talkgroups are not even being monitored at all, so you would not get in trouble keying up some unused talkgroup that no one is listening to. I'm usually available after 5pm and all weekend.

Why not just file an FOIA request for the radio talkgroup/setup?

Mike :)

2148. RE: [CenTexComm] curious things

Yahoo group: CenTexComm
Date: 2004-02-28 01:03:12 UTC
From: Michael Schadone
Topic: 2145 Message: 2148

To all:

The anatomy of a APCO 25 signal includes digital header information and data information. This is in packet form that is burstable and includes error correction. If you think of an email message, the header includes who the message is from, who it is directed to, what software you are using, and what type of data you are sending. With APCO 25, this is much the same. I have included reference material below.

As far as not hearing certain groups whether scanning or not, I believe it is a software issue on the back-end. This needs to be looked at by the vendor for safety sake. We need to be able to receive 100% of transmissions when on the job. I think that the system can work, but it is still being tweaked for inter-operability and stability. I will not advocate utilizing UHF or VHF at this time, though. I will say that the issues need to be addressed.

I hope that helps.

Mike

FEATURES OF APCO 25

6.25 kHz Bandwidth (CQPSK) Modulation

The CQPSK modulator consists of a table look-up, the two outputs of which (I and Q) are Nyquist filtered and then amplitude modulated, in phase and quadrature phase, before summing. The information bits are processed by the look-up table to yield a 5-level I signal and a 5-level Q signal. The I and Q signals are filtered with the Nyquist Raised Cosine Filter previously described. The I signal is then multiplied by the carrier and the Q signal is multiplied by the carrier after it has been delayed by 90 degrees. The modulated I and Q carriers are then summed together to yield the modulator output.

12.5kHz Bandwidth (C4FM) Modulation

The C4FM modulator consists of a Nyquist Raised Cosine Filter, cascaded with a shaping filter, cascaded with a frequency modulator.

Addressing

A very large number of radio addresses are provided, both for individual radios and talk-groups.

Aggregate Bit Rate

The aggregate bit rate is 9600 bits/s. In the case of data transmission, data packets basically consist of a header, containing overhead information, followed by data. In the case of digitized voice transmission, after the transmission of a header containing error protected overheadinformation, 2400 bits/s is devoted to periodically repeating the overheadinformation needed to allow for late entry (or the missed reception of the header).

C4FM Frequency Modulator

The deviation is +1.8 kHz for dibit 01, +0.6 kHz for dibit 00, -0.6 kHz for dibit 10, and -1.8 kHzfor dibit 11.

C4FM Nyquist Filter

The dibits of information (i.e., 4800 symbols) are filtered with a raised cosine filter which satisfies the Nyquist criterion minimizing inter-symbol interference. The group delay of the filter is flat over the pass-band for |f| < 2880 Hz. The magnitude response of the filter is approximately 1 for |f| < 1920 Hz, 0.5 + 0.5 cos (2(f/1920) for 1920 Hz < |f| < 2880 Hz, and 0 for |f| > 2880 Hz.

C4FM Shaping Filter

The shaping filter has a flat group delay over the band-pass for |f| < 2880Hz. The magnitude response of the filter for |f| < 2880 Hz is sin(pif/4800)/(pif/4800).

Data Packet Data Blocks

Confirmed Data Blocks contain a 7-bit serial number (to allow for selective transmission), 9 bits of error detection on the entire block, and 14 octets of data. Unconfirmed Data Blocks contain 12 octets of data (note: a 32-bit error detection code is appended to the end of all data packets).

Data Packet Error Correction

Header Blocks normally use a rate 1/2 trellis coder for error correction. Unconfirmed data packets normally use a rate 1/2 trellis coder, while confirmed data packets normally use a rate 3/4 trellis coder. Interleaving is applied over Data Blocks.

Data Packet Header

The Header Block used for communications between a radio and a packet data node (i.e., switch) contains 10 octets of address and control information, followed by 2 octets of error detectioncoding. Information contained in the header includes: the identity of the Service Access Point to which the data is being directed, a manufacturers identification (to allow for non-standard functions), a logical link identifier to identify the sending radio of an inbound packet to a node and the receiving radio of a packet outbound from a node, the number of blocks to follow in the packet, the number of pad octets to fill out the last block, the sequence number of the packet, and the Fragment sequence number. For packet data communications directly between two radios, essentially two 12-octet Header Blocks are used at the beginning

of each packet in order to convey the necessary address and control information. The header is preceded by 48 bits of synchronization and 64 bits of network identifier (to prevent confusion between radios in different networks).

Data Packet Structure

Data messages are divided into Fragments of less than 512 octets. Fragments are, in turn, divided into Blocks of M octets, where M=12 for unconfirmed messages and M=16 for confirmed messages (except Header Blocks are 12 octets in length). Note: a Fragment, preceded by header information, is defined as a Data Packet.

Demodulator

The demodulator is capable of receiving both the C4FM and the CQPSK signals. It consists of a frequency modulation detector, followed by an Integrate and Dump Filter and then a stochastic gradient clock recovery device. The Integrate and Dump Filter has a flat group delay over the band-pass for |f| < 2880 Hz. The magnitude response of the Integrate and Dump Filter, for |f| < 2880Hz, is approximately sin (pif/4800)/(pif/4800).

Digitized Voice Coder Method

After evaluating several candidates, APCO 25 selected IMBE (Improved MultiBand Excitation)vocoder, operating at 4400 bits/s. An additional 2800 bits/s of forward error correction is added, for error correction of the digitized voice. IMBE has also been selected by INMARSAT, for use in digital voice maritime satellite communications.

Digitized Voice Frame Structure

The Header Word, transmitted at the start of every transmission, contains 120 bits of information and 528 bits of error correction. Voice Frames are 180 ms in length and pairs of Voice frames compose a 360 ms Superframe. The first of a pair of voice frames transmits, in addition to digitized voice and its error corrective coding, 72 bits of link control information, 168 bits of error corrective coding on the link control information, and 16 bits of embedded low-speed data signaling with 16 bits of error corrective coding. The second of the pair of voice frames transmits an additional 16 bits of low-speed data signaling with 16 bits of error corrective coding, 96 bits of encipherment information, and 144 bits of error protective coding on the encipherment information.

Digitized Voice Header Word

The header is preceded by 48 bits of synchronization signal and a 64-bit network identifier (to prevent confusion between radios in different networks). The 120 bits of information in the Header Word consists of 72 bits for the encipherment initialization vector, 8 bits for a manufacturer identifier, 8 bits to identify the encipherment algorithm, 16 bits to identify which encipherment key variable is being employed (in systems with multiple encipherment key variables), and 16 bits for the talkgroup address.

Including error corrective coding, status symbols (22 bits) not described in this brief contribution, and preceding signaling, the header requires 82.5 ms for transmission.

Digitized Voice Encryption Information

The 96 bits of encipherment information consist of the three encipherment-related fields in the header: the 72-bit encipherment initialization vector, the 8-bit encipherment algorithm identifier, and the 16-bit encipherment key variable identifier. The encipherment information is protected by 144 bits of error corrective coding. Note: the encipherment process does not change during a transmission. The repeating of this information every 360 ms is primarily for late-entry by receiving radios.

Digitized Voice Link Control Information

As previously stated, 72 bits of link control information is contained in the first of each pair of Voice Frames. If the addressee is a talk-group, the link control information consists of 1 octet describing the type of information (e.g., talk-group type of transmission), 1 octet containing the manufacturer identifier, 1 bit indicating whether or not the transmission is of an emergency nature, 15 bits reserved for future use, 2 octets for the talk-group address, and 3 octets for the transmitting radio's identifier. If the addressee is another radio, the last 7 of the 9 octets consist of : 1 octet reserved for future use, 3 octets for the destination radio's identifier, and 3 octets for the transmitting radio's identifier. This information is protected with 168 bits of error corrective coding.

Encryption

Information required for decoding to take place (including the encoding initialization vector) is transmitted at the beginning of all transmissions, and is embedded in the signaling overhead throughout all digitized voice transmissions. This allows for the use of multiple encoding algorithms and "key variables". An adequate number of bits have been assigned to allow for even the highest (i.e., most secure) levels of encoding.

Error Protection

To provide for the maximum possible coverage (i.e., range of operation), a high degree of forward error correction and interleaving has been provided for. The mobile environment is subject to severe Rayleigh fading and the APCO 25 techniques have been designed to operate in bit error rate environments of up to 7 percent.

Flexible Modulation Method

A pair of modulation methods have been selected that utilize a common receiver. The first, which utilizes a constant-envelope 4-level Frequency Modulation (FM) variant, can utilize simple, high-efficiency amplifiers and has emissions that fit within a 12.5 kHz bandwidth. This method will be fielded in most equipment initially. The second, which utilizes a CQPSK variant with amplitude components, requires the use of highly linear or

linearized amplifiers and has emissions that fit within a 6.25 kHz bandwidth. (The receiver, common to both, has a 6.25 kHz bandwidth.)

Low-Speed Data With Digitized Voice

An 88.9 bit/s low-speed data channel is provided in the digitized voice frame structure. No application is currently defined. One application under discussion is to use the low-speed data channel for the transmission of accurate geographic location information.

Talk-Group Operation

Unlike normal telephone operation, all members of a talkgroup can receive the transmissions of all other members of that talk-group. Members of a talk-group do not have to receive the beginning of a digitized voice transmission (i.e., late entry is provided for).

Are they expecting DPS to act like the British Royal Guard at Buckingham Castle? It's a little outrageous to think that anyone will sit in a car and stare out of the windshield continuously for 8 hours.

Just my thought.

Mike

Subject: [CenTexComm] Capitol Security Movie Watching Investigation Done

Capitol police are everywhere but where they need to be.
Updated 02/26/04 - 9:12 am Video Available
Capitol Security Movie Watching Investigation Done

News 36 Video

Here is the story:
* DPS Trooper <http://207.207.6.50/rmfiles/dps_ruling.ram>

A DPS inquiry into violation of department policy at the Texas Capitol is over. Back in November, KXAN found a member of the Capitol police watching movies while on duty in her car.
That trooper was supposed to be guarding the gate on the west side of the Capitol, but we found her watching movies and munching on an apple instead of keeping her eye on security. Trooper Cynthia Salinas was guarding the Texas Capitol, armed with a stack of movies and a portable DVD player in her cruiser. On that November afternoon, her supervisor defended her multi-tasking.
"As long as she's paying attention to what she's supposed to be paying attention to, she can look at that also, as long as she's not involved with that," Capitol Police Sgt. Mike Bowen said on Nov. 20, 2003.
It turns out that wasn't OK. Her punishment is a formal letter of reprimand in her permanent file stating: "This conduct on your part violates the departmental rules regarding professional conduct."
DPS officials refuse to discuss the case on camera instead issuing a brief statement that "using electronic devices, such as DVD players, on duty is unacceptable behavior."
Governor Rick Perry says troopers get the message.
"I think the Colonel looked at all the details. I trust his judgment, and I think that the real message was sent because of the investigation. The troopers understand the importance of safety around this building," Perry said.
DPS insists the building is and was secure, despite a stunning admission

after our discovery last year.
"This is a highly accessible building here, and it's not as tight a security as some other buildings," Bowen said.
"Texans can know that they are as safe as possibly can be made," Perry said.
A DPS spokesman says Trooper Salinas is still assigned to the Capitol police. Bowen has voluntarily transferred out of Capitol duty, and the west gate was permanently closed as was previously planned by DPS.

Bigger issue - why pull a uniformed, armed, commissioned law enforcement officer off of patrol duties to do guard duty? Hire a security officer.

When you tell a real police officer to do guard work, they're going to find a way to goof off. Remember the situation where APD officers were fishing at Decker Lake Power Plant?

They didn't pull someone off of a patrol to sit at the Capital, that is that trooper's job - to guard the capital. A while back the Capital Police were merged with DPS, not without some grumbling on both sides. That is why you see DPS all over the place down there now. And Capital Police were always armed, they just didn't have the same standards of training (of course this was heard from a DPS trooper so it might be a bit biased).

I wonder if this was an ex-Capital Police person??

Topic: 2143 Message: 2156

Make no mistake, A DPS Capitol officer cannot just suddenly go to work the next day as a Trooper patrolling the interstate. They go through different training and standards. The Capitol officers are sometimes APD and DPS wannabe's that were unable to get on with those agencies. I'm not saying all DPS Capitol are bad.. I'm just saying they are ** NOT ** DPS Troopers. I do not understand the reason that they feel that they need to go all over downtown pulling over DWI's and cars running lights and speeding and going the wrong way on a one way streets while Transients are sleeping on state property and in parking garages and Urinating and defecating in the stairwells. They just look the other way when it comes to transients, but they will hide in an alley and stake out looking for the slightest violation so they can make a traffic stop. I have obvious opinions of them.. but I have ridden with APD and the general consensus from APD is that they can't stand them.. They said they are always trying to start stuff and expecting APD to come help them.. It' makes it really touch when they don't even have the same radio channels. I remember one time when we (me with APD) were called to assist other agency and we went and met Capitol Pd they had found some transient drunk wondering around like the other transients do all the time. and they wanted us to transport him to jail for P.I. They had him in handcuffs, etc. . The APD guys took him a few blocks from the Capitol PD and we let him go at a transient area and told the other transients to look after him. Anyway just my thought on it.

To recap.. Capitol Police Division patrols all the state buildings such as the big state parking garage near 4th and Guadalupe. They are on 155.445 (154.695in). They are the ones pulling over every drunk and ignoring the protection of the buildings and property. The Other Division Patrols just the Capitol grounds including the grass out front, the capitol, the underground and usually deal with protestors.. Those bunch are on 460.125 and they are digital. it is ironic that 2 agencies with the same name. one are on UHF and the other is on VHF. It totally does not make sense to me at all. Both dispatchers, however work out of the small building at 15th and Congress were you can actually make changes to your driver's license without much hassle.

2157. 2 Crime Scenes in NW Austin and a Thank You

Yahoo group: CenTexComm
Date: 2004-03-02 14:03:47 UTC
From: Frank E Jacks, Jr.
Topic: 2157 Message: 2157

I live in Anderson Mill (183 and 620 area), and as usual didn't
have the scanner on at the opportune time.
On my way to work this morning, I saw WCSO at a house
on Bristle Oak with crime scene tape all around it. Turned on
the scanner but the dispatch had obviously already gone out.
Never could figure out what was going on.
But, then, as I was continuing on to work, I heard them asking
if a crime scene had been set up at a second location in the
neighborhood on Double Tree (it had).
I work downtown and lost the signal by the time I got to work -
along with the fact that they kept using their cel phones.
It's extremely unusual to have two crime scenes in the
neighborhood at the same time (unusual to have even one
for that matter).
Does anyone know what happened?
Oh, and by the way, thanks to those who helped me out a
few weeks ago sorting through the various APD 460
dispatch frequencies and their assigned "zones."

The radios are digital because the troopers and security need to
contact each other all throughout the extension and the undergound
parking garage. You can hear the DPS building security guards on
460.125 unscrambled.

2160. Severe Weather Threat Tonight and Thursday Morning

Yahoo group: CenTexComm
Date: 2004-03-03 20:59:39 UTC
From: Robert
Topic: 2160 Message: 2160

From: Larry Eblen [mailto:Larry.Eblen@...]

All,

This is a quick reminder on the threat of large hail, severe
downburst winds and tornadoes late tonight and Thursday
morning. The event appears likely to move quickly, entering
the western sections near midnight, and clearing east of
IH-35 Thursday by noon. Flash flooding does not appear to
be the problem tonight - it will all be moving too fast.

The keys are:
1. Fuel - deep moisture - is already in place.
2. Wind shear - we have strong turning in the low levels
with speed shear aloft.
3. Lift will be supplied by a strong upper level storm
system approaching from the southwest, focusing its storms
along a cold front.
The level of our threat has been upgraded by the Storm
Prediction Center from "Slight" to "Moderate"
The only factor not in favor of severe weather is that this
will occur at night - without the benefit of maximum
heating.

Again:
our forecasts are at:
www.srh.weather.gov/data/ewx/zfpsat
our discussions are at:
www.srh.weather.gov/data/ewx/afdsat
our 7 day severe outlooks are at:
www.srh.weather.gov/data/ewx/hwosat
Please call if you have questions or concerns.

Larry and the EWX Staff

2161. Bryan College Station scanner meeting

Yahoo group: CenTexComm
Date: 2004-03-04 05:41:19 UTC
From: Sly & Debbie
Topic: 2161 Message: 2161

Hello,
For those of you that are near or in the Bryan College Station area we will be having a local "get together" next week. All scanner enthusiasts are invited. See below for more info.
If you wish to correspond please do so off-list.

Meeting will be Tuesday March 9th at 7:00pm at the Wings & More on University Drive East in College Station. If you plan on attending drop me a line so I can figure a rough count so I might can get a table(s) going a little a head of time (if they permit). Bring your radios/misc if you wish and come as you are. Please note you will be responsible for your own tab/tip.
For those of you that are hams I will be monitoring the 146.820 w5ac repeater.

If by chance next Tues is simply not good for a lot of folks we'll plan on it the Tues after spring break.

Thanks and see you there!
Sly n5gqb

2162. Capitol PD

Yahoo group: CenTexComm
Date: 2004-03-04 05:06:56 UTC
From: chris-howell
Topic: 2162 Message: 2162

I ran into a DPS trooper working security at St David's when I brought a pt in. Since I knew that "Capitol PD" worked the security there and I recognized her from running collisions in NW Travis County, I asked her about this.

Heres the poop:
There is no Capitol DPS, Capitol PD, Capitol Patrol Division or any other Capitol anything. They are ALL troopers trained and certified to the same standards as any other trooper throughout the state. She said that DPS merged all the Traffic Enforcement related divisions (Highway Patrol, Licenses, Weights, Inspections and Capitol PD) in to the Highway Patrol. Most of the troopers that are downtown now are troopers that were on the streets in another county and transfered to "Capitol" for the schedule or whatever. Almost all the old "Capitol PD" officers/troopers have transfered out to the streets throughout the state. So the trooper you see downtown is the real thing and has a high probability of having been out on the streets before working downtown.

However, Robert's comments about the way Capitol PD was is something that I can't argue with!

Chris

2163. RE: [CenTexComm] Capitol PD, AFD 1142, radioreference.com and IPN

Yahoo group: CenTexComm
Date: 2004-03-04 19:37:40 UTC
From: Robert
Topic: 2162 Message: 2163

Regarding the Capitol PD thing, the last thing I had heard was from Wes, regarding a friend of his who was (used to be) a Capitol Officer and was wanting to be a trooper. No can do. You can't just transfer in. From what I remember (and Wes could further clarify) but you had to reapply, re-interview (as you would with any new position) and attend a whole new academy.

It's the same between APD, and Airport (Aviation) and Parks Police. They are way different and don't even have the same pay scale like DPS does.

Wes emailed me and confirmed that AFD is now simulcasting channel 5 on talk group 1142. I have no idea why they keep switching around and when (or if, hint hint) AFD will switch to the new 800 Mhz Digital radios. If you have a scanner and are monitoring this system, keep it in search as new talk groups like this out pop up all the time.

Lindsay is doing an excellent job on his new website www.radioreference.com with an index of all the trunked radio system and will now be collecting all frequencies on his new site. Check it out and if you have not registered yet.. it's totally painless and you will not get spammed . The old site: trunkedradio.net is no longer.

The Incident Page Network has now extended their database to include all sort of areas of the county including Central Texas. I totally recommend that everyone subscribe and if you dispatch enough calls in a month, you will get free access to all areas. It's really not that hard to page out major incidents.. Just try to page at least 1 or 2 a week. The more you page the more you share the information. Check it out at www.incidentpage.net

2165. The History of DPS Capitol

Yahoo group: CenTexComm
Date: 2004-03-04 22:06:09 UTC
From: ExLngHrn@aol.com
Topic: 2165 Message: 2165

Ok, since we've been talking about DPS Capitol, I'll give a long detailed history of how it is set up and organized.

Prior to 1993, the Capitol Police were a law enforcement agency under the Texas Purchasing and General Services Commission (now called the Building and Procurement Commission). When the Legislature passed the sunset bill reauthorizing DPS, they changed it so that DPS would take over law enforcement for the Capitol and state offices.

Of course, the previous Capitol Police officers were carried over from the Capitol Police and recommissioned as Capitol Police Officers under DPS. This job classification was not the same as a trooper position. (The badges even said Officer instead of Trooper.) The highest one could promote within the Capitol Police division was to the rank of lieutenant. Captains and the Major commanding DPS Capitol were brought in from the ranks of the regular DPS.

At first, DPS ran a separate, abbreviated police academy for Capitol Police officers. While it was conducted by DPS, it was not the six month "recruit school" that produced DPS troopers for the other uniformed divisions of DPS.

DPS Capitol officers who wanted to transfer outside of the Capitol Police and go to Highway Patrol were required to apply for the position just like any other applicant.

After a few years of this, and some threats of interference from the Legislature, DPS recommissioned ALL Capitol officers as troopers, with the right to transfer and promote just like any other DPS trooper. The only condition is that Capitol troopers might need some training for other DPS positions, such as License and Weight positions needing to learn trucking laws and procedures.

As of the present, the DPS "recruit school" produces personnel for the Texas Highway Patrol (formerly the Traffic Law Enforcement division comprised of Highway Patrol, License & Weight, Motor Vehicle Inpsection, and Capitol) and the field service of the Driver's License Service (the uniformed troopers assigned to driver's license offices).

Hope this explains everything.

-Wes

Talk about wierd. I was by the Georgetown Justice Ctr.
I picked up 467.9375 by the new jail. I tried 462.9375
by using the reverse feature on the BC296 abd did not
get any audio. I could hear both sides on this
frequency. Can anyone verify this? I know that the old
jail used 453. I can't remember right now.

2170. Heavy Rain Outlook for South Central Texas

Yahoo group: CenTexComm
Date: 2004-03-12 06:04:12 UTC
From: Robert
Topic: 2170 Message: 2170

From: "Jon Zeitler" <Jon.Zeitler@...>

Sorry for the late notice on this one, there
is an increasing likelihood of heavy rain and
potential flash flooding late tonight through
Friday afternoon.

An upper level trough over northern Mexico is
stronger than previous model runs indicated, and
when combined with moist Gulf air and a stalled
surface front, will produce widespread rain
across South Central Texas.

The area with the highest threat for heavy rain
will be the Edwards Plateau and Hill Country,
generally north and west of a line from Del Rio
to San Antonio and then to Georgetown. We have
issued a Flash Flood watch for the Edwards Plateau
and Hill Country through 6 am, but this may have
to be extended for a longer time and possibly in
area to the east. The main threat time will be
from midnight tonight through noon Friday.

Rainfall amounts will likely average one-half to
one inch across the area, although some spots in
the Hill Country could receive up to four inches
of rain by Friday evening.

We will have extra staff on duty through the night
in case you have any questions.

As always, all of our forecast information is
available at: http://www.srh.noaa.gov/ewx/

-Jon and the EWX Staff

ok well good. I was also going to say to make sure you are in "id search" mode instead of "id scan" mode when first starting out but you already knew that right? The display really doesn't say that when you are scanning along.

2173. BC296 card errors.. turn off and then back on again.

Yahoo group: CenTexComm
Date: 2004-03-19 15:50:03 UTC
From: Robert
Topic: 2173 Message: 2173

If the BC296D is not scanning correctly, then turn the radio off and back on again. I get the "card error" about once a day. It's really a pain. It should not matter if you use it in the car or in the house. Reception is very critical, so I would change out the stock antenna as soon as you can. I recommend Radio Shack Catalog #: 20-283 (<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283>) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

Also be sure you get the software update. Go to the Uniden website at www.uniden.com for more information. Go to Customer Service, then Product Support then click on download

Well the Update is not supposed to help with the Austin System. the key is getting a good clean signal into the radio. The antenna makes a big difference and so does your location, that's why the 796D base seems to pick up a little better than the handhelds. . Just sitting the radio on a different shelf will make all the difference in the world. Some nights I have to put the sound settings down to 433 and other times and most of the time it's at 533.

Yea I second the motion about the RS 800 antenna. Well worth it so be sure to pick one up. Part # 20-283 $14.99

2178. Talkgroup 1886 Transportation Natural Resources

Yahoo group: CenTexComm
Date: 2004-03-22 03:58:22 UTC
From: Robert
Topic: 2178 Message: 2178

There is a talkgroup on the Austin / Travis Co system. it's 1886 where units are checking out at schools.. seems like early in the morning like 7:15 am and then confirming going off duty about 5pm ish. It seems to be schools out in the county..Possibly SRO's (School Resource Officers?) or crossing guards perhaps.. And it seems to be a Travis County talkgroup possibly related to the whole big TNR. Transportation Natural Resources they call it with Travis Co. Trying to get more information on this division and how large they are and how they interact between schools and roads and TC parks if anyone can fill me in. They have a Talkgroup 1902 that they call TNR Serv 1 but right next to it is TC Parks Ch 1. So why do they have this first one? Is it a common channel that everyone is supposed to monitor? I tried looking around on the internet but all their sites are down or slow to respond tonight. Does anyone know more about the TNR division and where they are even located. I know they have satellite offices all over .. one being at FM620 at the base of Mansfield Dam on the Austin side.

2180. Re: [CenTexComm] BC296 in a car / PRO-96

Yahoo group: CenTexComm
Date: 2004-03-22 23:56:01 UTC
From: John Habbinga
Topic: 2180 Message: 2180

I visited Austin this weekend with my RadioShack
PRO-96 with the upgraded firmware.

I got mixed results when monitoring the Austin/Travis
County system.

When stationary the radio did pretty well. It would
decode most of the audio, although it does have a very
digitized sound. Like listening to a low quality
Internet audio stream.

When mobile the sound quality drops off a lot. I was
able to decode and hear the communications, but the
digital artifacts were almost overwhelming and made
use when mobile very unsatisfying.

I brought along a Uniden BC780XLT with me. I used it
to monitor the retransmitted signals on the old UHF
band. The sound quality on the UHF band is slightly
better than the audio of the PRO-96 when monitoring
the equivalent talkgroup.

I noticed that the retransmitted UHF radio only
receives about 90% of the transmissions. The PRO-96
didn't seem to miss any. I thought this was odd.

While travelling to Lubbock, I passed through
Sweetwater. I was able to monitor the digital DPS
radios that are in the VHF band. Audio quality wasnt'
perfect, but pretty good. I was mobile the whole way
and I could pretty much understand everything that was
being said. The DPS repeater in Loraine on 155.880
was passing digital transmissions, but the PRO-96
would not even try to decode it. I think that
repeater is not actually digital, but rather just
hearing and repeating the digital signals in analog mode.

> You say you visited Austin? Do you have digital
> systems where you live?

I now live in Lubbock. I did grow up in Austin.

> When I first got my Uniden I was not happy at all.
> However, now that I
> have my radio "dialed in" and updated it works like
> a champ.

I don't know what I could do to "dial it in". I
didn't mess with the AGC feature. Perhaps that might
have helped.

I did monitor some people that were talking about
spotty radio coverage. They mentioned that if you are
too close to the repeater that the radio wouldn't
work. They didn't qualify what "close" was.

I do have a question about APD communications. Why
does APD relay records checks over their main dispatch
channels now that they have more channels (talkgroups)
available to them?

I should clarify. Coverage for DPS overlaps for
Abilene and San Angelo. 155.880 is a repeater near
Loraine that is used (was used?) by DPS from the
Abilene office to avoid interference to San Angelo.
I'm guessing that with the new DPS digital system they
don't have intereference problems. So the 155.880
repeater isn't really being used.

I do have a question about APD communications. Why
does APD relay records checks over their main dispatch
channels now that they have more channels (talkgroups)
available to them?

Good question. Answer: It's hard to teach an old dog new tricks.. I was thinking there would be a tac channel for every Austin Police sector.. I'm shocked the way they set it up. Actually there are tons of talkgroups to use.. but they are just keeping it the old way. So why the need for all these talkgroups that they are not using?? Look at EMS they have enough reds and blues to never have share the same talkgroup with another call, yet they put every EMS/Fire related response call in the city on Tac Blue 3, even if there are 40 calls going at once. (Saturday night 2am never fails.. "EMS unit not yet assigned".. meaning I guess all 40+ ambulances on calls). .. they all get assigned the same talkgroup. If it's a rescue or motor vehicle accident in the city, they get Tac Blue 6, but again all incidents in the city of this nature go on this talkgroup no matter what. Fortunately county calls can now be divided among FireNet 153.95 or TCEMS 155.715, but I thought they would have like 3 more county response channels. Tonight APD had a RAT callup and the Sergeant said have everyone go to Ch 8.. Wrong Dude.. he finally corrected him self saying ok go to the RAT talkgroup. Many of the talkgroups are not even used on the system. just the standard dispatch channels that they have always used, that's why it's so hard to try and identify all these unused talkgroups. None of the Reds are used.. Blue 8-16 are not used, no interops are used, none of the Law 1-5, no NSPAC, neither of the 2 directs, no I-calls, none of the EMS Clinical Practice or other stuff.. they use Medcom Central only , I've only heard Medcom South and north and west used once. Except for a few additional channels like APD RAT and Crit 1.. they have not changed much at all. There are a lot of talkgroups for APD street response but you are not missing anything at all.. they just have drug stings from the street sellers in east Austin. They arrest them and they paid for their bail in cash and are back on the street before the ink is dry on the paperwork.

Sounds like a plan. Since I'm way east of you guys I highly doubt if I could make it so good luck.
Yea I recently tried that over here in Bryan and had a few guys to show up. We're gonna try to make it a bi-monthly or quarterly thing and see how it develops over the next several tries. This list (centexcomm) has a lot more subscribers so it should be no problem. Yea just don't pick a spot thats overly crowded and make sure there's no cell towers near by! Ha! You might also want a place where you seat yourself, as opposed to a place where you are seated. Especially if you don't know how many is going to be there and plus if some folks come late it will be no problem joining in.
Anyway my 2 cents,
Sly

2187. reception is important to get a good signal, card error on the BC296D, if officer is in troube and let's meet

Yahoo group: CenTexComm
Date: 2004-03-23 12:40:50 UTC
From: Robert
Topic: 2187 Message: 2187

As for linking the Trunked system to the old UHF system, I'm told they are still using the room full of handhelds linked together and that the UHF radios are occasionally overheating and having to shut down the restart so there is sometimes radio traffic that does not get repeated on the UHF. The most I can say about the Austin /Travis Co TRS is that reception is a must. and it's not that easy.. some locations work better than others. I have had all the same experiences with my BC296D. Sometimes it sounds horrible and then other times it sounds great.

What bugs me most about the radio is the "card error" that I get all the time and I have to turn it off and back on again. By the way. Is there only one software upgrade for the uniden? I did the one that was supposed to fix the higher talkgroups but I was wondering if there was another one.

On the old system, if a unit needed to transmit, he could talk anytime since the dispatchers monitored the input all the time. with this new system I believe they are always monitoring the output so I'm not sure what happens when they try and transmit that they are in trouble. They do have an emergency channel talkgroup but I have not found it yet. No one will key it up for me.. imagine that... Well I don't blame them but they could just say they want to test it.

Yeah we should try a get together. The ham guys meet at Marymont Cafeteria at 38 1/2 and Guadalupe. It's pretty central and offers a good selection but they are not open that late. Perhaps a Sunday afternoon would be best for me. Other suggestions are Luby's, Fuddruckers near I35 and Hwy 290, Pluckers on Research, Central Market is good too. . etc.

EMS talkgroups and emergencies.

I can answer these two. EMS has a problem to contend with and that is that AFD is still on the UHF FireComms. When EMS assigns a call with FIRE, they need to move the two responding units to a like-channel (FireComm 3 [FIREMED]). EMS keeps BLUE3 patched to FIREMED for this reason. We cannot dynamically allocate patches due to operational feasibility. When AFD goes digital, things will change and the system will be overhauled. Hopefully, the city will be divided up between North and South and everyone will get off of EMS CONTROL. This should be an Operations channel, not a dispatch channel. Also, the RED talkgroups need to be renamed into functional divisions.

As far as APD not being able to get through on a channel and need to broadcast emergency traffic, they can hit the orange button on the top of their radio and give the clear code after transmitting their emergency traffic. This would be a last ditch effort, but ultimately, it would get the broadcast to the dispatcher. As EMS, I have no problem turning my radio to TAC, County, PD, TCSO, etc. and broadcasting emergency traffic if I get no response from my dispatcher (an RA from APD for your own unit would be embarrassing and get you paying more attention).

Anyway, I hope that helps.

Mike

Why you want "99" reports (27/28/29) coming back on the main channel (if not using an MDT):

Other officers can start moving that way. They hear the information come out and have heard where that officer is, at least generally.

I know that when I hear a TCSO unit mark out on traffic in Charlie sector, I at least make a mental note of their general area, so that if something goes to hell, I can head that way too.

Since I play on TCSO's system, I can say that the dispatchers there are generally very consistent with regards to handling subjects coming back 99. If I'm getting returns via radio, I can generally distinguish whether or not "something is amiss" by how I'm called (no, I won't get more specific than that on a public list) or when. Because of that, other officers know too.

The scary thing is that on a day to day basis I hear units calling on talkgroups that are not monitored.. I hear EMS units trying to call Brack Labor and Delivery on the L&D talkgroup and no one answers. I assume L&D still doesn't have a radio on there.

No one except EMS and possibly fire, knows that EMS only uses MedComm Central. The other ones are not monitored by EMS, and APD and some others are clueless on what EMS is using. Part of the problem is that APD only has the MedComm Channels programmed in and they do not have EMS control. (go figure). I know AFD has begun some sort of switch cuz they are fiddling around with the talkgroups and I swore I heard an AFD engine on MedComm Central, but I only heard it once.

APD does the same thing but not as frequently. They have SWAT talkgroups but quickly figured out they cant use them because not every APD officer that would be on the perimeter of a SWAT call would be able to monitor the incident So they are more or less used for training so I'm told. Everyone has their own event channel but no one has each other's event channel. Parks "Events" are only in the park radios. EMS "event" are only in EMS radios, APD "event" is only in APD radios. For some unknown reason the UT Event Channels are the only ones that are programmed in all agencies radios (at least fire, police and EMS). Perhaps if they went back and renamed many of the talkgroups, they may get used more. I would like to see a common channel that is monitored by all agencies on the system. Where UT can talk to APD .. UT recently hosted the UIL basketball games at the Erwin Center and a few fights broke out where they required APD to assist. APD was never told and not aware that the event was taking place on UT EVENT 1 that APD has in their radios.
Instead they communicated back and forth using their dispatchers and relaying information by telephone which was very inefficient, especially in an "officer needs assistance" type situation. I hate to brag but from my standpoint, I know more about coordination than they do as far as the radios are concerned. We are lucky that nothing major has happened here. But given a potential serious situation, communications are critical. They spent a lot of money on this system and having everyone and all agencies from Pflugerville to Westlake on there is a great advantage. I just would like to see them take advantage of all the talkgroups available to them.

So far in my limited experience here in Houston with my 296, I have not had to "tune" the digital audio. The few federal agencies I've listened to worked fine with the default settings. This is both on VHF and UHF. Do not have any 800 digital in use around here (yet).

Yea I would say from what I've read they have improved the tuning with the 296 as compared to the 250d. I've got the 250d and I have had to hand tune everything!
As the (my) saying goes-- "I haven't meet a system/signal (digital) yet that I didn't have to tune--vhf/uhf/800".

The fire dept always makes a big deal out of a light ballast or something when it's a downtown Hi-rise; they will easily bust out a 3 alarm fire for a light ballast. .. this is supposed to be a deck on fire or something according to mikey.. lots of talking but if they are not screaming into their radios then it's all a bunch of play. I think EMS just sent like 4 ambulances to the building.. which should be pretty much unoccupied at this time of night.

2198. RE: [CenTexComm] 3rd Alarm Hi-Rise Fire on Congress Ave.

Yahoo group: CenTexComm
Date: 2004-03-26 17:37:47 UTC
From: Michael Schadone
Topic: 2195 Message: 2198

EMS response (in order of onscene times):

- M06 (Fire scene rehab)

- M12 (Initial transport unit)

- DC5 (EMS Operations)

- SO4 (EMS Command)

- MR01 (RIC)

There were no patients that required any EMS. M06 performed in the rehab sector for onscene FF personnel. M12 responded in case there was to be a transport, but there wasn't. DC5 and SO4 took control of the IMS overhead for EMS. MR01 responded from Stassney and I-35 and didn't get there in time to perform. Typically, they will stage two floors below the fire floor to assist with RIC.

Hope that helps,

Mike

2199. More collisions on the Interstate and the automatic 4 hour shutting down of the freeway ....why??

Yahoo group: CenTexComm
Date: 2004-03-26 18:13:49 UTC
From: Robert
Topic: 2199 Message: 2199

This morning's 2 collisions on I-35 got me to thinking once again. Am I the only one asking questions as to why the roadway has to be shut down for hours. I am not talking about the 10-15 mins that EMS needs to get patients out or whatever, I talking about turning on the TV and seeing the wrecked cars with no one standing around them. Are there no wreckers in the city that can respond? How long do they get to respond? Are the wreckers so honest that if hey know the freeway will be blocked for hours, will they defer the tow to another company.

Do serious traffic injuries and/or those involving 18-wheelers require the "call-out" of a special investigative team that seems to have to come from a long way off (Buda or Taylor) and the whole freeway is shut down for this reason? And do those same investigators have to come to the same traffic as the backup to get to the scene to perform their scene investigation.

I heard about the I-35 shutdown this morning and turned on the TV to see live pictures of a car up under a tractor trailer but no one was doing anything about it. What was the hold up? Were they waiting on a wrecker? It seems like there is a lot of time spent waiting on the 1st Wrecker to show up (45 min time limit perhaps) and then if they do not show up they do a 2nd call for another company and that company gets another 45 minutes. I'm from Houston and we never had a wrecker rotation in Houston, It was first come first serve and they had emergency or "E-Tag" wreckers that were authorized to show up and tow immediately. Or else they would have a "10 minute call for wreckers to the ... so and so.. parking lot and they gave it 10 minutes and then drew a name of who would get the tow.

Yahoo group: CenTexComm
Date: 2004-03-26 22:19:09 UTC
From: Rev. Sean Farrell
Topic: 2199 Message: 2201

Robert,

No they aren't waiting on a wrecker. Believe me, I've seen wreckers get to scenes darn quick.

Doesn't paperwork need to be done? if there is a facility, things take longer. you can't really speed up the paperwork process. I don't know about Austin but out in Hays (for example) if there is an MVC (not wreck), and property is damaged, the DPS is called out. Sometimes they take their time to get there and they have to do the paper work when they DO get there.

Do you really think a major MVC with one or more deaths is going to be cleared up and have the road open in half in hour or less? I don't. The tow companies have nothing to do with a four hour road closure.

You're upset about a road/lane being closed for that long. I am upset when people get in a minor fender bender and they hold one or more lanes of traffic up waiting for the police to arrive and telling them to move the cars. That's more of a hazard than closing a road.

sean

2202. RE: [CenTexComm] robert: why long subjects all the time??

Yahoo group: CenTexComm
Date: 2004-03-26 22:39:17 UTC
From: Robert
Topic: 2199 Message: 2202

No, I don't think the cars need to be in the same place on the freeway stuck together for the police to do their accident report. Most of the time, they get their information, measure skid marks perhaps (if it is a serious collision), mark the point of impact, etc etc. and then they sit in their cars and do the paperwork. Honestly this morning's accident involved where one car made an improper lane change. Perhaps a simple accident report would suffice. What I hear time and time again on the scanner is that a "serious injury collision" usually requires the callout of traffic office which only seems to work from 8am-5pm and since these usually occur about 3am. They have to be "called out" coming from home which means they have to get take a shower, get dressed, get in their cars, sometimes have to go by the station first to get their equipment and then head out to the scene. This is an absolute waste of time when you have an entire interstate shut down. Not to mention that the same officer must get on the same roadway and incur the same traffic backup just to get to the scene. It just seems like the specialized investigators all live in far away remote towns. I know that of the few K-9 dogs we have, one lives in Dripping Springs and the other lives in Lago Vista, not exactly the quick response I would like to see when they have to "call-out" K-9. Austin is not the little bitty sleepy town that it used to be and it's time to have accident investigators in the city available 24 hours. It just seems like they are shutting down the freeway way too much these days. This is about a daily occurrence and it will be a miracle if it's not shut down on this Friday afternoon.

Robert,

No they aren't waiting on a wrecker. Believe me, I've seen wreckers get to scenes darn quick.

Doesn't paperwork need to be done? if there is a facility, things take longer. you can't really speed up the paperwork process. I am not in central Texas, I am in the Metroplex. But I know from experience as a Police Officer here that if you have a serious injury/fatality wreck the roadway will be closed for a while. I have been on scenes where it has taken more than 15 minutes to cut someone out of a car. If you have a fatality the medical examiner has to make scene. For most large departments a special traffic investigator handles serious injury accidents and has to be called. If it is a serious injury accident measurements have to be taken, photographs are taken and so on. The accident scene is treated as a crime scene. Only after all of the on scene investigation is completed can the vehicles involved be towed. Some agencies have a time limit for wreckers to respond. If the wrecker company has a habit of showing up late the contract can be terminated. Sometimes it can take a while for the responding personnel, including wreckers, to work their way through traffic if there is not a good alternate route.

DC5 and SO4 are both district commanders. SO is responsible for (S)pecial (O)perations. We have two of them (SO4 and SO6). And, (R)apid (I)ntervention (T)eam. RIT is typical for a FAST Co. out here, but they call it RIC. I'm assuming the C is for Company, but I'm not positive. Sorry.

From: Mike Reed, LP
Topic: 2210 Message: 2210

Folks -

I need your help. Our PD, Mustang Ridge, is currently on Motorola 9100 series MDT's using CDPD to the City of Austin MDT net.

We're being phased out. Austin is dropping CDPD support, so we have to switch. To move to the new spiffy city/county system is cost prohibitive.

What other options are out there? Anyone know of other active CDPD nets that we might be able to contract with, that would have good radio coverage in Mustang Ridge?

Other networks? I've heard LCRA might have a net.

We don't really have the money to upgrade equipment, but it's something I'll consider as I can likely find grant funding (we only need three units).

Any ideas?

Thanks,

Mike Reed
Mustang Ridge PD

What other options are out there? Anyone know of other active CDPD nets that we might be able to contract with, that would have good radio coverage in Mustang Ridge?

Other networks? I've heard LCRA might have a net.

We don't really have the money to upgrade equipment, but it's something I'll consider as I can likely find grant funding (we only need three units).

Any ideas?

Thanks,

Mike Reed
Mustang Ridge PD

From: The Goodman's
Topic: 2210 Message: 2216

I recently read that CDPD is being phased out by the manufacturers so it's not just a matter of finding another provider. There is supposed to be newer faster technology being phased in. If you get any information on grants from a post you made on another list let me know please. We could use some funding where I work.

Subject: [CenTexComm] MDT's

Folks -

I need your help. Our PD, Mustang Ridge, is currently on Motorola 9100 series MDT's using CDPD to the City of Austin MDT net.

We're being phased out. Austin is dropping CDPD support, so we have to switch. To move to the new spiffy city/county system is cost prohibitive.

What other options are out there? Anyone know of other active CDPD nets that we might be able to contract with, that would have good radio coverage in Mustang Ridge?

Other networks? I've heard LCRA might have a net.

We don't really have the money to upgrade equipment, but it's something I'll consider as I can likely find grant funding (we only need three units).

Any ideas?

From: Myles Barkman
Topic: 2217 Message: 2217

867.450 is one of the channels of the STAR-Net trunked radio system here around Houston. Specifically, it is part of the site that we call "Clodine" which is southeast of Katy.

It also belongs to the East Texas Medical Center trunk system near Tyler but that may be a bit far-reaching.

2218. RE: [CenTexComm] MDT's

Yahoo group: CenTexComm
Date: 2004-04-01 20:19:12 UTC
From: gill lineberry
Topic: 2210 Message: 2218

The two biggest factors at play here are:
1. CDPD never generated the volume of business that AT&T and other expected, it's just not profitable.
2. The cellular companies have up to now been required to maintain analog 800 MHz on the original frequency allotments. But as of this summer they can all drop analog service, so it will start disappearing and of course along with it CDPD. I see a couple of carriers are going to maintain existing customers for a few months.

Recent frequency allocations for public safety up in 4 GHz will permit much faster through put and most people not anticipate 19200 kbytes will be the minimum acceptable. Many agencies are looking at sending video and pictures and the faster speeds are essential.

Public safety is really a small market. It even only represents about 4 to 5% of Motorola's production.

Gill

2225. Bell County Info

Yahoo group: CenTexComm
Date: 2004-04-02 12:52:17 UTC
From: George
Topic: 2225 Message: 2225

Looking for monitoring information for the Bell County area. I will be relocating to the area around the end of May. I currently use a PRO 93 HH to monitor the county 800 system here in Florida where I live.

I've found several sites listing the talk groups, frequencies, etc for both BellCo and Ft Hood. Just wanted to see if anyone had any particular information that might be helpful to me for the area. Thanks.

2229. DPS Capitol on 158.970

Yahoo group: CenTexComm
Date: 2004-04-06 17:36:09 UTC
From: Robert
Topic: 2229 Message: 2229

Ok .. why am I hearing DPS Capitol Division on 158.970 (repeater out) simulcasting the 155.445 repeater. I think this was an old Round Rock channel. Can anyone else confirm this.. it might just be my scanners all freaking out.

Lots of good radio traffic this morning.. seems like every accident Austin works is a rollover.

Try www.radioreference.com Look under Texas and select Trunked radio systems.. there you will find the LCRA system.

Use this link here: http://www.radioreference.com/modules.php?name=TRSDB&sid=48

From: Robert
Topic: 2233 Message: 2233

The LCRA was talking some on their 02-094 "Hawk" ops channel.. also called the Hydro Operations Control Channel. They were also doing a lot of I-calls asking about levels at each dam. I did not hear any rescues however or anything unusual from the LCRA rangers. It may take a few days for the water to reach those areas.

From: Alex Jones
Topic: 2234 Message: 2234

Hey guys,

What's the best way to get in touch with a few storm chasers here in central Texas? I've tried the Skywarn Texas and the NWS pages, but they just seem to provide general program information.

Thanks a bunch,
Alex Jones
Austin

2235. Skywarn spotters? contact Jeff Draper directly

The Storm Stories show covering the Nov. 2001 event in Austin will air this Sunday night on The Weather Channel at 7pm (?). Catch it if you can.

I have a friend in the Austin area that is looking for a reputable company to install a scanner in his truck. Someone that is knowledgeable about scanners and the other equipment that he will need. Also, he is looking to get a digital scanner. Is there a model available to install in a truck? Thanks.

The places that install car stero's may be able to help. They know nothing about scanners, but understand electrical hookups and securing units.

From: daynes
Topic: 2240 Message: 2240

According to this report

http://tinyurl.com/3fckv

two F-16s intercepted a small plane near the Bush Ranch today
(04/09/04) - it landed in San Marcos.

What is the likely home base for interceptors working that area?

Thanks.

2241. Scanner installation

You could check at a truck stop radio shop or anywhere that installs CB radios.

2242. Pflugerville Pallet Fire brough town a whole radio tower

Yahoo group: CenTexComm
Date: 2004-04-11 04:34:20 UTC
From: Robert
Topic: 2242 Message: 2242

The fire in Pflugerville was pretty intense this morning and even brought down a radio tower for KNLE radio station. I think there may also have been some other repeaters on the same tower.

Warehouse fire challenges firefighters
Updated: 4/10/2004 11:27:47 AM
By: Amy Bowlin

Palette manufacturing warehouse
An early morning blaze kept Pflugerville firefighters busy. The fire was at a wood pallette manufacturing company off Grand Avenue Parkway.

It created plenty of smoke before crews got it under control and caused real problems for nearby businesses.

Palettes in a manufacturing warehouse caught fire between 5 a.m. and 5:30 a.m. Saturday. Fire crews had a tough time accessing the fire because of the power lines that surround the warehouse.

"This fire had a lot of fuel, had a good head start. We had a pretty significant fire showing when we arrived. The wind was blowing from the south at a real good clip and we were hampered from getting into the fire because the power lines were arcing and threatening to fall on the fire crews," Pflugerville Fire Department Chief Ron Moellenberg said. "Quite a lively show. The fireballs were dancing along the power lines and the transformers were lighting up on us."

A radio tower belonging to KNLE 88.1 FM went down in the fire, knocking the station off the air.

Every firefighting unit in the Pflugerville Fire Department was called into action for this fire. Pflugerville also get help from some Austin city firefighters.

2243. This is what I have for KNLE-FM from the FCC data base. It is odd that the news is reporting it to be their transmitter. 88.1 is off the air

Yahoo group: CenTexComm

Topic: 2243 Message: 2243

88.1 Mhz FM is off the air and News 8 has an interview with one of the D.J's They said it was that tower in Pflugerville. The FCC data does not confirm this. Also based on the Longitude and Latitude. this may have also been a Nextel Tower

2244. RE: [CenTexComm] Pflugerville Pallet Fire brough town a whole radio tower

Yahoo group: CenTexComm
Date: 2004-04-11 08:53:57 UTC
From: Steve S. Bosshard (NU5D)
Topic: 2242 Message: 2244

I was wondering why Ed Butler was looking for a 230 ft Rohn 65 tower right NOW. Now I know. Skytel Paging also had a BT and BR there. Getting to the tower through all of the pallets was like going through a maze.

Steve

News 8 Austin did a story that was on their site where they interviewed a DJ from KNLE-FM and they did confirm that it was THEIR broadcast tower that fell out of the sky from the pallet fire and 88.1 FM is indeed off the air until they can get on a new tower.

There are plenty of towers in the area including a HUGE MCI or phone type tower (big read square) on the other side of FM 1825. .. I guess it's just a matter of negotiating some lease space.

2246. Re: [CenTexComm] so what did you find out robert? why do you have such long subjects. the body of the message can go in the correct place...the subject doesn't need to be five or six full sentences

LICENSE/CERTIFICATE: **FCC or Comparable General Radio License/Valid DL from State of Residence

JOB SUMMARY
MINIMUM QUALIFICATIONS: Graduation from an accredited four (4) year college or university with emphasis in management, public administration or operational/technical aspects of telecommunications applicable to communications or a closely related field (transcript[s] required if used as a qualifier) plus four (4) or more progressive work experience operating or coordinating complex communications systems in an industrial, federal, state or municipal government organization. *Additional work experience of the type described may be substituted for the academic requirements on a year-for-year basis. **Must have the ability to obtain a Federal Communications Commission (FCC) general radio telephone license, National Association of Business and Educational Radio (NABER) license OR other similar, like, or comparable license that may satisfy licensing requirements. THIS IS A SHIFT POSITION; APPLICANTS MUST BE ABLE TO WORK DAY, EVENING, MIDNIGHTS AND WEEKENDS AS REQUIRED. OCCASIONAL HOLIDAY WORK MAY BE REQUIRED, AS WELL.

KNOWLEDGE, SKILLS, AND ABILITIES: Considerable knowledge of high frequency VHF/UHF radio communications. Knowledge of technical and communications duties performed including personal and mainframe computer relationships, software installation and configuration; commercial, government, and amateur band radio, television and cable capabilities. Working knowledge of antenna and satellite installation. Skill in: good communication, including the ability to develop and perform group instruction; operating/training others to operate audio/video, radio, and other communications equipment according to applicable FCC regulations. Ability to travel and work irregular hours as required to attain assigned objectives.

JOB DUTIES: Assists the Technical Operations Supervisor by performing administrative and technical tasks to coordinate and implement operational procedures in the Response Section. Writes/maintains planning documents, operates various audio/visual, telecommunications/computer equipment/assists in the supervision of the Response Section

personnel. Work is performed under general supervision/guidance with substantial latitude for innovation and the exercise of independent judgment within the limits of applicable federal and state rules, regulations and controls. Implementation of new policies and procedures must be approved by the State Technical Operations Officer. Performs related duties as assigned.

OTHER: Felony conviction will be cause for rejection. Must present birth/naturalization certificate prior to employment if selected.

Interested and qualified persons should submit their application to the Texas Department of Public Safety, Human Resources Bureau, 5805 North Lamar Boulevard, Building C, Austin, Texas 78752. Telephone # (512) 424-5900. Employees should submit their application to the Human Resources Bureau with a copy of the top page of their application to their immediate supervisor. ALL applicants MUST make application using the standard application form. All applicants (both walk-in and mail-in) using college coursework as a qualifier MUST submit copies of their college transcripts at time of application. IT IS THE RESPONSIBILITY OF THE APPLICANT TO SEE THAT APPLICATIONS ARE CURRENT AND COMPLETE AND THAT ALL REQUIRED DOCUMENTATION IS ATTACHED. STANDARD APPLICATION FORMS WILL NOT BE ACCEPTED WITHOUT COLLEGE TRANSCRIPTS (TO VERIFY COLLEGE REQUIREMENT IF USED AS A QUALIFIER) ATTACHED.

These positions will close at 5:00 P.M. on April 16, 2004. Applications must be received in the Human Resources Bureau prior to this time.

AN EQUAL OPPORTUNITY EMPLOYER
Veteran's preference is granted according to state law.

From: Myles
Topic: 2249 Message: 2249

Sorry if this has been asked before but I'm looking for a good list
of active frequencies for Sea World (or SeaWorld) in San Antonio.
Can only find what is in FCC database.
Anyone have a list or know where to find one?

thanks

Yeah, I think that's the same info he and I got when we did a search on Google. We were really trying to get a good list that someone personally verified, complete with descriptions of channel usage, channel numbers, PL tones, the works.
He may be the one that winds up making that kind of list for the rest of us...

The dilemma you run into when trying to take the family out to one of these places is that it's hard to have fun spending time with the family and also try to identify 20 or more frequencies. Unless you get a hotel really close to the place and can play when you are all resting.

2253. Austin system and the pro-96--my comments

Yahoo group: CenTexComm
Date: 2004-04-20 02:01:01 UTC
From: Sly & Debbie
Topic: 2253 Message: 2253

I plowed through Austin Sunday headed back home with my radios and wanted to give some comments.

First off a little about my setup and route. I am using a pro-96 with the dsp upgrade but with the original cpu version. Antennas I had was a mag mount 800mhz cell antenna (gain type) on the car and the RS 800 duckie inside. I had a 250d with me but since it don't do 9600 I didn't even bother.
I was coming from SA up I-35 and started (that is-entered in the freqs) monitoring the simulcast sites about 10 miles south and continued up I-35 and went east on 290 and then on 21 toward Bryan. We made a pitstop to eat at a place near near Barton Springs and 1st.
In addition to the main simulcast sites I could pick up the following IR sites on the route: Honeycomb (T0104), Burleson (T0105) and Shingle (T0106).
I could pick up the Burleson site the furtherest going east, almost to 290E and 21.

First some positve notes:
1) I like the fact of just having to plug in the data channel and off you go! No need of having adjust audio quality or select a band plan. Plus having dsp keeps the audio level even.
2) I like the fact of being able to get the system info off of the data channel such as system id (SY13e), connect tone? (Bee09), baud rate (96) , tower site (T0101 and T0102) and % decoded. I did notice though that the IR sites indicate 9600 baud too, even though they xmit in c4fm modulation. I had thought they were 3600 baud.
3) The audio on the IR sites was very good and clean (I mainly listened to the Burleson site as it seemed to have the most activity). I could copy them very well, standing stilll and mobile.

Now for some mediocre notes:
1)Audio quality on the simulcast sites (cqpsk) was not that hot while moving mobile. While I could catch what was being said, there were a fair amount of audio dropouts. Sometimes just a syllable would be gone, sometimes a whole word. I tried the attenuator and sometimes it would help, other times it wouldn't. I presume that it was dependent upon my location relevent to nearby cell towers as I was moving through. I also tried the duckie while moving and this seemed to help some. I am guessing that with the outside 800 antenna in the metro that I am picking up too much cell phone interference causing desensing, while the inside antenna isn't as prone to such. So maybe a non 800 outside antenna would help here.
Now when we stopped and got out reception got a lot better. Hardly any dropouts then. While still not as clean as the IR site but 100% copyable now. Decoding was at 98-99%.

As we moved out of town down 290E reception of the simulcast sites got worst by the mile. By the time I got to Manor it was rough copy, maybe 70% copyable at best. By the time I got to Elgin, forget it, maybe just a word or syllable every now and then. However the burleson IR site was still punching through good.

So in a nut shell it works in Austin but could use some improvement on the audio dropouts while in the mobile enviroment. I have no idea how the 296/796 does in the same set up over there as I don't have either one.

I would like to hear from some other pro-96 users in the Austin area and compare recepetion notes. I would also like to hear from the Uniden bunch 296 or 796 users about their reception comments.
Also has anyone done a head to head comparision of the two? I remember you guys over there were supposed to get together for lunch or dinner and ompare notes and stuff. Have you done that?

Thanks, Sly

2255. My comparison of the Pro-96 and BC296D was only for an hour inside Radio Shack.

Yahoo group: CenTexComm
Date: 2004-04-20 03:44:25 UTC
From: Robert
Topic: 2255 Message: 2255

I did a very brief (1 hour side by side comparison with the Pro-96 and the BC296D at the Radio Shack Mopac and Parmer. I was impressed with both radios and did not notice that much of a difference. I was not able to move around much so my comparison was a limited but I think both radios are very comparable. I do know that you must understand that if you buy the Pro-96.. you almost have to go online and get the software from http://www.starrsoft.com/software/win96/default.asp but at least it does use regular batteries and not a battery pack. Also that software requires the programming cable which seems to be very scarce right now. I'm told cables usually are at least a week or two and almost always have to be mailed. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange. It is sad that after paying them $499 for a radio, you don't even get a singe AA battery free. yes I'm sure you might be able to beg and plead and perhaps you will get their cheapest set of batteries thrown in. I think Radio Shack should throw in the cable, the antenna and rechargeable batteries for free.

Cory at the Radio Shack at Parmer and Mopac was very helpful so if you have any questions or want to see the radio, he may still have one.

2256. LTR System in Austin and San Antonio

Yahoo group: CenTexComm
Date: 2004-04-20 11:56:36 UTC
From: Robert
Topic: 2256 Message: 2256

I need help trying to identify this system in Austin and San Antonio.. this would be very helpful commuting because they are truck drivers who talk about I35 including highways in San Antonio and all the way to Austin. 452.675 and 452.825..not sure if they are related but I think they are. The FCC data base shows this as Nathan Sherman Enterprises dba SPP Communications. I guess it's an LTR system I would like to program this into my BC296D but I don't know how to go about getting the LCN order. Is there anything anyone can do to read it with trunker or something.

I think KEYE news (Austin) is on it.
Also a private ambulance service is on it.
ACC Police is using it (Austin Community College)
this may be it.

That is a PassPort system - a hybrid of LTR. S&P has Austin and SAT tied together with 1.544 T1 circuit - I am co-channel on 452.8 in Killeen and 452.675 in Temple.

Best I can tell PassPort is not ltr compatible, but many ltr radios will also work in a passport system, IE Kenwood TK880's and Icom F4TR. I am using Uniden / VDV Media ESAS with Multisite Dispatch in Waco, Temple and Killeen. ESAS is LTR compatible.

From: Steve Bosshard
Topic: 2256 Message: 2260

Ltr does not use a control channel per se. Control is distributed with voice on each channel in the form of 300 baud sub audible data. Some LTR systems send an update packet every 10 seconds. In the early days this was a SERVICE indicator to let subscribers know that they were in range. This feature went away some time back, and the update packets are not required, but they sure run other users off of the channel.

ESAS has an update packet every 1.25 seconds and the frame is 80 bits there abouts instead of the 20 bit ltr packet.

Steve

All I want to know is if I can program this into my BC296D or even a Uniden 245XLT and monitor it by seeing the talkgroups display? It is an analog signal and there are some talkgroups that I do not care to monitor. But it is interesting that it goes from San Antonio up to Temple.

That is a PassPort system - a hybrid of LTR. S&P has Austin and SAT tied together with 1.544 T1 circuit - I am co-channel on 452.8 in Killeen and 452.675 in Temple.

Hey robert it is me Corey,

Yea just a few updates, we have sold enough of those radios now that I have a model quantity of 1, meaning we should always have one in stock. We are still the only store in austin that has a working Pro-96, and we still offer the oppertunity for any one with question to come in and demo one out.

Those cables are on back order until sometime in June, but i have been pouching them from other stores all over texas.

Ask for me, my Name is Corey and I am located on Pamer and Mo-Pac

2266. RE: [CenTexComm] LTR System in Austin and San Antonio

Yahoo group: CenTexComm
Date: 2004-04-21 23:42:33 UTC
From: Steve S. Bosshard (NU5D)
Topic: 2256 Message: 2266

Receiving ID codes tells me that PassPort is more compatible with LTR than I realized, unless, some channels are PassPort and others LTR. Seems like PassPort has some strange sounding tones associated with calls that are not heard on LTR systems.

Thanks,

Topic: 2256 Message: 2267

Ok I give up how do I program this into my scanner or give me the radioresource.com link where I can go to program in this system that i'm hearing KEYE and ACC police officers on. All I can tell you is that they are on 452.675 and 452.825..

2268. Re: [CenTexComm] LTR System in Austin and San Antonio that uses 452.675

Topic: 2268 Message: 2268

Steve .. I'm not finding a trunked system, with 452.675 even listed in Austin. can you give me the link to the system you are monitoring that has that frequency in it. I am very clearly hearing KEYE and ACC (Austin Community College) Police on it. As far as I know this may be LTR. IT mainly will be on 452.675 but may occasionally jump to another frequency, as if the 452.675 is the "home" channel. No there is no buzzing trunked channel.. It's like someone keys it up every few seconds.

Receiving ID codes tells me that PassPort is more compatible with LTR than I realized, unless, some channels are PassPort and others LTR. Seems like PassPort has some strange sounding tones associated with calls that are not heard on LTR systems.

Thanks,

Steve

From: Sly & Debbie
Topic: 2256 Message: 2270

If it actually is a monitorable (trunk tracked) ltr system then you need
to enter in the channels in a specific order in accordance to their home
channel assignments. If the person who mentioned this earlier that were
trunk tracking this sytem could let us know what the channel order is
that would be great.
PS-personally I thought passport ltr systems could not be tracked.

2271. New poll for CenTexComm

Yahoo group: CenTexComm
Date: 2004-04-25 20:12:38 UTC
From: CenTexComm@yahoogroups.com
Topic: 1742 Message: 2271

Enter your vote today! A new poll has been created for the
CenTexComm group:

Which Sunday evening is best for you for
a CenTexComm get together at Central
Market Cafe 4001 North Lamar in Austin, TX

http://www.centralmarket.com/cm/cmLocation.jsp#Nlamar

We would meet roughly 5 until 8. Come
late, leave early, it's all up to you.

o May 2
o May 9
o May 16
o May 23
o May 30
o June 6
o I don't care

To vote, please visit the following web page:

http://groups.yahoo.com/group/CenTexComm/surveys?id=1214868

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

2272. APD to start encrypting?

Yahoo group: CenTexComm
Date: 2004-04-27 05:14:43 UTC
From: Sly & Debbie
Topic: 2272 Message: 2272

Got this e-mail from someone:

(copy/pasted)

It is my understanding that you have requested any and all frequencies used by the City of Austin's Emergency Services Departments.

The City of Austin has recently changed radio systems and converted to the 800mhz trunked system. We are currently in the process of encrypting the system so that critical radio transmissions will not be broadcast and received by potential criminals. We expect this process to be complete in the coming weeks.

We have received numerous requests for our updated frequencies and the Attorney General has ruled on the release of these frequencies. Below is a link to that ruling.

I would be happy to provide you with a list of the frequencies once we complete the encryption process.

If you have any questions please do not hesitate to contact me at the number below.

2274. Austin Fire Department

Yahoo group: CenTexComm
Date: 2004-04-27 09:05:49 UTC
From: thefb_54
Topic: 2274 Message: 2274

I currently listen to the Austin Fire Department on 453/460 Mhz, but I was wondering when they would be going strictly digital. Trying to hold off buying a new scanner as long as I can. Any one know when this is going to happen? Thanks.

2275. Re: [CenTexComm] APD to start encrypting?

Yahoo group: CenTexComm
Date: 2004-04-27 14:18:43 UTC
From: gill lineberry
Topic: 2272 Message: 2275

This is a rediculous opinion by the Attorney General. Following the statements in the opinion, if I were to ask APD what color their cars are painted, they would not have to tell me because it would help criminals spot them. The frequencies are a matter of public record at the FCC. They are readily available to the public and I wonder if this information was provided to the assistant AG who wrote the opinion.

I am new to Texas, and the Texas statute on what can be withheld is very broad. Gill, N4VOX

2276. Austin Fire Department and EMS will keep "some" UHF and who's watching who

Yahoo group: CenTexComm
Date: 2004-04-27 15:06:34 UTC
From: Robert
Topic: 2274 Message: 2276

We really do not know when or if AFD or EMS will go completely digital. We have been told that in order to make their voice pagers (and Knox box) work, that they will have to keep the UHF pagers and that means to use a UHF frequency or equivalent. They may just broadcast the paging only but who knows. If anything, dispatches will remain simulcast on UHF but I would image the fire ground (firecom) and tac channels will eventually not be rebroadcast.

Regarding the note from yesterday I have no idea what they are trying to say meaning that they are taking steps to eventually scramble the entire digital trunked system. This would be crazy considering the cost that it would involve. I think they are upset because one of the promises that Motorola made to the City of Austin and Travis County was that this new system would be secure being digital and trucked. Of course the technology on monitoring whatever they decide to go to is only a step away so they can run but they can't hide. Besides, 98% of what I hear on the radio is really not what I would consider sensitive information that would put any official in any type of danger. For that other 2 % there are always digital mobile phones that can be used to communicate. You have to draw a fine line between the police wanting to conduct "secret operations" that they don't think the public should know about and the public taxpayer's right to know. APD has come under a whole lot of scrutiny lately and I don't think now is the best time for them to come in and say, we don't think the public needs to know what we are doing. I wish more people would challenge this opinion. I agree that it is way too broad and, they can't just come forward and say .. "well anything and everything we do is sensitive and hearing any communication at all puts our officers in danger". I totally disagree. Many people with scanners including the media, wrecker drivers and volunteer agencies have helped the police do their jobs and to be on the lookout for suspicious activity that they were made aware of by way of monitoring communications. They tend to take the opinion that the public at large cannot be trusted and that we are all terrorists and out to get them. On the contrary, I would think they would encourage people to hear how good of a job they usually are doing. We are, after all, taxpayers and we pay for what they are doing. APD cannot afford bad press right now.

2279. RE: [CenTexComm] Austin Fire Department and EMS will keep "some" UHF and who's watching who

Yahoo group: CenTexComm
Date: 2004-04-27 18:14:29 UTC
From: Steve Bosshard
Topic: 2274 Message: 2279

I suspect that some communications will be encrypted, but once they realize that coverage is severely degraded by encryption, they will probably run most communications in analog voice.

OUR NUMBERS

County Stats: STAR Flight has a response area that covers 19 Central Texas Counties. In the 2003 fiscal year STAR Flight was dispatched on 1604 missions. Of those 1604 missions 598 were outside of Travis County. The program remains committed to providing the Central Texas Region with a Public Safety Aircraft.

MISSION ACCOMPLISHED

Sharon Zambrzycki's Story
"I was driving on Hwy 79 in Hutto that night, listening to the radio about the tornadoes in the area. I turned on to FM 685 and was going about 35 mph. I noticed there was water on the road, but I couldn't tell how deep it was or how far I had gone onto the bridge. I saw a car coming towards me that was in water up to its headlights. I called 911 and was told emergency vehicles were on the way.

The woman in the car coming toward me drove up to my car, got out and into my backseat. She told me her car had stalled. We tried to backup and bumped into a man in his car behind me. He said 'We have to get out of here.' We got out of my car holding onto each other and the car. We were going to try to get to the guy behind me when we were both swept off of our feet. I felt my leg hit the guardrail as I was swept over and we lost hold of each other. I kicked off my shoes and b! reast stroked downstream, spotted a tree and grabbed hold on the downstream side. I held on there for I don't know how long. I kept telling myself that it would be all right. Help was coming.

After that I saw flashlights and heard people yelling. They were able to locate me. Tim Wallace with the Pflugerville Fire Department was able to get out into the water and throw me a rope and a life vest. He tied himself to a tree and told me to tie the rope under my arms. After that it was like somebody opened the floodgates. The water was moving faster and rising rapidly. I tried to move my wedged leg out from under me and lost my grip on my tree. Tim let out slack in the rope and I found a bigger tree downstream. The only problem was a tree limb had floated down with me and was sitting on top of the rope causing me to go underwater. I wasn't sure how long I could hold my breath. I thought of drowning and remembered someone had told me how easy it would be. I then thought of! my husband. Just then I saw a big bright light and heard the helicopt er. It wasn't long before a man with a yellow helmet (Jim Allday, STAR Flight) was telling me to put my arm through the cinch collar.

As I was being pulled out of the water, someone saw the rope that connected me to Tim. They lowered me slightly and cut the rope. The next thing I knew, I was being lowered ever so gently to the muddy ground. After they got me to the ambulance, they told me my temperature was 92.7. I don't think I could have held on to that tree any longer."

LIGHTNING

Lightning
<http://www.starflightrescue.org/Images/Email/20040427/lightning.gif>

Lightning is basically an attempt by the atmosphere to correct an electrical imbalance between the earth and the mid-levels of the atmosphere. Over time we have come to know several aspects of where and how lightning strikes. First, any tall object such as a tree, metal tower, or any tall object that stands out higher than its surroundings is a prime target for a lightning strike. This would include a human being standing on very flat, open ground. There are several types of lightning. Most discharges are of the weaker, negative strikes which include lightning inside of the parent cloud, cloud to cloud discharges, cloud to air discharges, and finally cloud to ground strikes. Stronger discharges can erupt from the side or turret of the cloud into clear air, and can actually strike the ground many miles from the storm. These discharges appear very bright and may even appear to pulsate many times in the same bolt pattern. Lightning can also take on the form of sheets, b! alls, chains, or ribbons.

The term "heat lightning" is a misnomer and is merely lightning that is too distant for thunder to reach the viewer. A lightning strike will cause the air in and immediately surrounding the ionized channel to superheat to an incredible 54,000&#deg F! As a result the air expands in an explosive manner which creates the shock wave we hear as thunder. The closer the person is to the strike, the shorter, more explosive the crack of thunder is.

Here are some safety tips and information to think about:

1. First, be cognizant of the weather forecast for your area.

2. As thunderstorms approach, quickly find safe refuge inside a building.

3. If a building is not available, try to stay inside a car or the cab of a truck.

4. Stay away from windows, and do not use the phone or take a shower. Remember that electricity can travel through the ground and enter a home through plumbing or electrical wire.

5. Avoid metal objects such as tennis rackets, baseball bats, and golf clubs.

6. If you are caught outside, stay low, off of hills, and away from metal fences/towers.

7. Absolutely do not seek refuge under a tree.

8. If the storm is close and you are caught out in a wide open area, crouch low on the balls of your feet. Do not get on your hands and knees as this increases your ground contact.

There have been many people who have been struck by lightning and have lived to tell about it. If you are caught outside and the storm is near or upon you, beware of the following phenomena:

1. The hair on your arms, legs, and head stands on end.

2. Your skin begins to tingle.

3. An inexplicable clicking noise.

Remember that all thunderstorms are dangerous and that your safest place is inside a building away from windows. Be safe and enjoy your spring and summer!

Which means the 70% of transmissions that are clear will be encrypted.
The other 30% will just SOUND encrypted...

LOL

Correct it was 15kc but now 7.5kc. Not very many stations use the 7.5 kc splits yet. 12.5 kc in vhf would only apply to the gov't stuff in the 160mhz area

2287. Austin TRS: Simulcast 2 site was not working.. I found a new control freq and 2 more new freqs.

Yahoo group: CenTexComm
Date: 2004-05-01 16:53:01 UTC
From: Robert
Topic: 2287 Message: 2287

As of last night I was not receiving Simulcast 2 tower. I went home and did a control channel search and found 3 new frequencies that need to be added to Simulcast 2. As of right now, the control channel is on 866.3875 and 2 more to add are: 868.55 and 868.1875. I am going to start checking the towers more to make sure we have the correct info.

I sent and update to www.radioreference.com

The following CenTexComm poll is now closed. Here are the
final results:

POLL QUESTION: Which Sunday evening is best for you for
a CenTexComm get together at Central
Market Cafe 4001 North Lamar in Austin, TX

http://www.centralmarket.com/cm/cmLocation.jsp#Nlamar

We would meet roughly 5 until 8. Come
late, leave early, it's all up to you.

CHOICES AND RESULTS
- May 2, 0 votes, 0.00%
- May 9, 1 votes, 11.11%
- May 16, 1 votes, 11.11%
- May 23, 6 votes, 66.67%
- May 30, 0 votes, 0.00%
- June 6, 0 votes, 0.00%
- I don't care, 1 votes, 11.11%

The people have spoken! We're going to meet at Central Market on N. Lamar on May 23rd from 5pm until 8pm (or so). It doesn't matter when you arrive, when you leave, or if you eat. I plan on us meeting outside somewhere. Look for the fine looking individuals with scanners.

Turns out my other obligation it earlier in the day, so I should be there the whole time.

See you then!

John

2295. Elgin Ambulance Services Enhanced

Yahoo group: CenTexComm
Date: 2004-05-06 19:24:03 UTC
From: Robert
Topic: 2295 Message: 2295

http://www.elgincourier.com/articles/2004/05/06/news/news01.txt
Elgin Ambulance Services Enhanced
Despite the news that Rural Metro is no longer serving Bastrop County, or even most of Texas, officials are making sure ambulance service to people in Elgin and the rest of the county is not interrupted.
"MetroCare Services met all of the requirements and have the ability to make system enhancements," said Peter Hicks, director of operations at MetroCare Services and formerly of Rural Metro. "The basics are still the same, there will be three 24-hour trucks in service. Owner Steve Diamond is testing out an additional unit and is working on joint posting utilizing resources in Austin. Elgin is unique in that it goes several days without a call and then several calls come in back-to-back," explained Hicks.
Enhancement of MetroCare began with the transition over the weekend. One of the ways service could improve is by adding a unit and MetroCare is adding a unit for 16 hours a day to begin with and may later make it a 24-hour unit.
"The county and cities have the option to subsidize the other unit or the call volume in the county may make it self-supporting," said Hicks. "We just want to find a way to not cost taxpayers more money."
General Manager Herb Deeton said the unit is specifically for Elgin. "We do know there is a need for it in Elgin. We are going to make a conscious effort to ensure better service," Deeton added. Decreasing response time is part of their plan.
One of the problems with putting another unit in the county is filling the unit with paramedics. Each unit requires six full-time positions and it will take a while to fill that need with the paramedic shortage that is area-wide.
Emergency response medics are difficult to keep within the county, also, said Hicks, because of the highly competitive wages offered in Travis County and Austin. To that challenge, medics with MetroCare will see $7,000 raises this year in order to compete with the big city. Those raises went into effect Friday. "This is a very positive move for Bastrop County," said Hicks.
Other changes will be the change of colors on the units. MetroCare's new units will be red, white and blue. Hicks already has an Expedition painted the new colors. Plans are also to put four brand new units out in the next two months. Those units cost $80,000 each.
Hicks added that MetroCare has been working with Elgin's volunteer firemen to coordinate first responders.

Yeah it is digital.. were you using your Digital scanner. If they were still garbled then they were using encryption or something that we don't have. The BC296D and Pro96 should have decoded the digital automatically. I also heard ATF talking this morning 165.285 and was hearing what you were but I didn't have my digital scanner handy.

Hey Robert:

I'm still unclear on exactly what system the city and county adopted for their new digital trunked communications. Are other area/counties going with the same system?

From what I can tell, there still isn't any reliable scanner/software out there to be able to monitor the new systems. Or has this situation changed?

Also, I have a close friend of the family who has been an AFD firefighter for 13 years. He tells me that trunked communications will eventually be encrypted...

What can you tell me about all of this. I have (and love) a Uniden/Bearcat BC785D w/o digital card. Just found (and downloaded a demo of) ARC250 from BuTel software. This "Advanced Radio Control" program seems pretty good. Ever hear of it?

Thanks,

M.D. Boyer

Response to questions:

I'm still unclear on exactly what system the city and county adopted for their new digital trunked communications.

From the site:

http://www.radioreference.com/modules.php?name=TRSDB <http://www.radioreference.com/modules.php?name=TRSDB&sid=2> &sid=2

System Name: Austin / Travis County Public Safety

Location: Austin, TX

County: Travis

System Type: Motorola APCO-25 9600 baud

Sysid: 13F

CT: BEE09

Digital Type: APCO-25 Exclusive

Uniden DSP: 633 1985 3242

Are other area/counties going with the same system? I do not know of any NEIGHBORHING COUNTIES that are also using the APCO 25 9600 baud digital Motorola system.

From what I can tell, there still isn't any reliable scanner/software out there to be able to monitor the new systems. Or has this situation changed? That is incorrect:

This is a very new Motorola DiGiTaL system that uses 9600-baud rate CQPSK Technology and only the newest "Trunk tracking" scanners will decode this system. This includes the Uniden BC296D (handheld) and the BC796D (base) radio at about $520 each. Try www.usascan.com <http://www.usascan.com/> or you can easily do a search on the web (including ebay) for these radios

Radio Shack carries the Pro-96 (handheld) @ www.radioshack.com <http://www.radioshack.com/> and search for the Pro-96 which essentially does the same thing as the Uniden handheld. Both have good and bad features. The Uniden has a total of 1000 channels that you can scan at one time, and it's price includes a battery pack that you pretty much have to deal with, the A/C adapter and limited programming software and a cable.

The Radio Shack Pro-96 sells for $499.95 and that price doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, cable or software

<http://www.starrsoft.com/software/win96/default.asp>

but at least it does use regular batteries and not a battery pack.

Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283> &product%5Fid=20-283>

for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

I have played with both radios and they sound equally well.. I have the BC296D handheld so that is the one I am most familiar with .. No you cannot use your BC785D even if you get a digital card for it because it will not follow 9600 baud.

Ok none of the radios are perfect.. digital is ..well.. it sounds like digital.. it sounds like some people who talk to you on a digital cell phone.. the voices get distorted.. sometimes the sentences break up.. but the city and county are having problems too. They are tying to get the bugs worked out and I'm sure they will make some improvements..but it will always sound bad.. that's just the way it is. I personally don't like talking on my cell phone any more than I have to.. Some people say they can't tell the difference between a cell phone and a land line phone. I say they must have a pretty crappy land line signal. I take calls from people at work all the time and I can pick out a cell caller usually in the first few sentences. The signal is just not always there. You get dropped calls you will find the same thing happening with the city's system.. one minute they sound great and clear and you or they move a little bit and all of a sudden it sounds bad. Distorted..

Also, I have a close friend of the family who has been an AFD firefighter for 13 years. He tells me that trunked communications will eventually be encrypted.

Gosh I hope not. We keep hashing that and it came up again most recently in a request for frequencies. It would be very expensive to encrypt all the radios for the whole city. And they would have to take all the ones already issued and take them back and reissue new ones... We already knew that certain groups may have the ability to use encryption (such as Homicide, gang units, supervisors, fire investigators, etc) but I do not think that everyone will use or have it. It simply would cost too much. Also there seems to be confusion here: Although Homicide radios may be equipped to go encrypted... it is the RADIOS that would be encrypted .. not the frequency or the talkgroup. So two encrypted radios could be on any talkgroup and be encrypted or they could even be on simplex or direct and be encrypted. Also you may start to hear one radio encrypted and the other

radio not encrypted. That is common if you ever listen to DEA or The Texas Rangers.

What can you tell me about all of this. I have (and love) a Uniden/Bearcat BC785D w/o digital card. Just found (and downloaded a demo of) ARC250 from BuTel software. This "Advanced Radio Control" program seems pretty good. Ever hear of it?

I have heard of this software but have not played with it that much.. For the new Uniden scanner, it comes with software that is fine for using.. You can't beat the free price. I put both a Uniden and Radio Shack download file in the files section of CenTexComm so if you are just starting out and clueless as I was on where to start.. you can load this up to get you started.

2304. towers and the Austin/Travis Co Trunked Radio System

Yahoo group: CenTexComm
Date: 2004-05-10 21:48:50 UTC
From: Robert
Topic: 2304 Message: 2304

I keep getting a lot of questions both on here and some phone calls including from the media so I wanted to again go over a few things of what we know about this system, now that some of the UHF radio traffic: 460.475, 460.15 and 453.275 is starting to disappear and some people are just now starting to ask questions:

Again most of this information is taken directly from
http://www.radioreference.com/modules.php?name=TRSDB&sid=2
Not all of this stuff my be right but it is what we have been able to get from various sources..

The Basic System consists of 2 main groups of sites.

001 Simulcast 1
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=00
1&d=trsinfo','height=375,width=500')> 866.1625* 866.2875*
866.7125 866.8125 866.9250 867.0875 867.1125
867.3125 867.3375
C i t y 867.5750 867.6000 867.8250
867.8500 868.1000 868.1250 868.3625 868.4250
868.6250
868.6875 868.9500

Simulcast 1 - are supposedly the towers inside the city known as the citywide layer which supposedly has about 7 towers and will support 19 simultaneous trunked conversations. This seems to match with exactly what we have listed under Simulcast 1. 19 voice and 1 control channel. The control channel so far for this site has always been 866.2875 but it could change at any time to one of the other frequencies. These scanners can support control channel searching where all you have to do is enter the control channel but this can change as it did recently with the other site. So we have about 7 towers all transmitting the exact same thing. That is why they are called Simulcast. I do not know the location of these towers but they are all probably within the city and depending on your location to the nearest tower you reception will be affected. This may also be referred to as C-W, meaning perhaps Central - West.
I'm told the primary site for the city is at the Decker. Near the power plant. This site is also where the intercity repeaters are located. Other city sites may be Martin Hill (near Shoreline Christian Center off FM1325, Davis Lane (I'm told this one is not working), Sematech, Pickle (J.J. Jake Pickle near Burnet and 183), Trading Post.

002 Simulcast 2
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=00
2&d=trsinfo','height=375,width=500')> 866.1375* 866.3875*
866.7375 866.8375 867.1625 867.1875 867.4125

867.6375 867.6875
County 867.9500 868.0500 868.1875 868.2750
868.3250 868.5500 868.5750 868.8500

Simulcast 2 - are supposedly the county Wide layer. The site says that Austin/TC EMS is on this layer. I'm not sure what that means and it just may refer to the one talkgroup. We were told that there are about 11 radio towers, capable of supporting 23 simultaneous trunked conversations. That does NOT match with the number of frequencies we have listed. So either this information is off or we haven't found all the frequencies for these sites. Just last week I noticed that my BC296D was not stopping on the control channel so that's why I knew immediately that something was wrong and started to search around (using control channel searching) and found a new control channel 866.3875. We did not previously have this one and from that, I also found 2 more frequencies used by these sites. There still may be more and let me know if you don't feel like you are hearing all the conversations and by all means, let me know if you find any new updates.

So this would be 11 towers all transmitting the same thing. I'm told the primary county site is Four Points, near FM 2222 and River Place.
Other County sites may include Lime Creek (FM1431), Trading Post.

If you are programming your scanner, I would recommend putting Simulcast 1 into bank 1 and simulcast 2 into bank 2. It would be very common for units to be transmitting the same talkgroups on both sites and in fact they do that all the time.

In addition to the 2 main sets of towers above; there are various intelli-repeaters all around that cover dead spots that the towers may not always capture. The intelli-repeaters are listed in case you want to monitor them. Monitoring the intelli-repeaters is very unpredictable since one transmission may be there and the next transmission may not. But if are near one of these towers trying to hear something that is in this area, it may be beneficial for you to scan them also. They are not near as distorted as the above main sites so you will hear them a lot clearer if you do hear something.

003 Marble Falls IR
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=003&d=trsinfo','height=375,width=500')> 866.8875* 867.2875
867.8000 868.1500 868.7500

004 Honeycomb IR
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=004&d=trsinfo','height=375,width=500')> 867.2625 867.7250*

005 Burleson Manor IR
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=005&d=trsinfo','height=375,width=500')> 867.8750 868.2250*
868.5000 868.9250
006 USGS Shingle IR
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=00

6&d=trsinfo','height=375,width=500')> 867.6625 867.9250*
868.4000 868.8000
101 Davis IR
<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=2&site_num=10
1&d=trsinfo','height=375,width=500')> 866.8625 867.1375*
867.7750

Singleton Bend
Collier
Bell spring
Lost Pine
Holman
Creedmoor We need Frequencies for these Sites.

I was told that the Davis IR was not working getting transmissions so the control channel may just be for CDT (computer data terminal) traffic.. who knows. We found sites listed in one of the radios that we do not have frequencies for, so any help you can provide will be appreciated. You can find these by performing a control channel search and then do the tracking by control channel. Make sure it's not something we already have from the above sites. All of the frequencies are from 866-869 MHz.

Ok everybody, I hope that clarifies things more. Let me know if anyone finds any errors with what I said. Again a lot of this information has been obtained from a lot of people and we just try to all send it in to Lindsay's site since he keeps such excellent records.

2311. The Big pursuit last night

Yahoo group: CenTexComm
Date: 2004-05-14 14:27:30 UTC
From: Robert
Topic: 2311 Message: 2311

The Big pursuit last night
Wow, and what a pursuit it was.. It started out at Grand Ave Parkway and I 35 about 4 am ish..and he went all the way up to Salado and did a u-turn and came back south on I35 to the Airport exit where he finally crashed hitting the wall and a bit of a brief standoff before he was finally taken into custody.. not sure about the girlfriend who was with him in the car and calling 911 saying he was going to kill himself if they got him stopped. And I have no idea what his warrants were for.. .. I know he rammed or did something to a TCSO car which is why the whole thing started to begin with.

When my friend first called me, it had gone north into Williamson Co. APD somehow got word of it and was setting up all along the interstate thinking he was gonna come south..... They kept asking where Travis Co was... uh... ok the Travis Co channels ARE on the new radio system. So they should not be asking that... or else dispatch could monitor the TCSO talkgroup and relay it back live... this doesn't have to be by phone lines anymore. Also a great opportunity to "briefly" link the talkgroups together... but alas...all was forgotten in the heat of the moment. There is a lot of stuff like.... "I'm at Mile marker 254 let me know when they are getting close to me" and a few seconds later, the pursuit blasts past them and they are like.. "Ok. thanks for the heads up".... Uh...dude... go and monitor the traffic directly... by the time the dispatcher waits for the call to be updated... from the 219 communications supervisor who I assume is on the phone with Travis Co. Hey wait... aren't they at the same dispatch center... can they patch the radio traffic to the big jumbo-tron... who knows. Precious seconds are lost when the information has to be relayed between dispatchers and messages and phone lines.. sometimes seconds make all the difference in the world.

Some more funny moments:

Of course everyone was on their own channel... The Williamson County system alone... had Georgetown on their channel, Round Rock on their Channel, Call 2 for Williamson Co, and the Supervisors where on their channel talking about it. APD was on theirs, TCSO on theirs.. No one would go to another agency's channel to talk to each other and everyone was trying to relay though their own dispatchers..

Kudos to the female TCSO deputy who managed to stay with the ENTIRE pursuit from start to Finish. (reception notes: Once you take the exit in Salado, you can't hit the trunked system anymore.... They lost track of her for awhile) She managed to avoid all the spike strips thrown...out... uh.. APD K-9 wasn't so lucky... He waited and waited all patiently at the Travis Co line for them to come back into Travis Co and make it as far as Grand Av Parkway (less than mile) when he got spiked.. sorry, thank you for playing..

STARflight intercepted the car coming back south, just north of Round Rock... ok I thought the procedure is to back off and let the helicopter call it.. And concentrate on setting out spike strips... the police cars need to back way off so those setting the strop strips have a chance to pull it back after the offender passes. Am I the only one that watches C.O.P.S? They do this all the time on T.V. Why can't we get it right? Hey wait... why they called STARflight? why not Air 1. No-one wants Air 1 to assist them but APD. STARflight is always the preferred choice of law enforcement through out Central Texas.

All in all I don't know how many police cars got spiked but I think it was more than 6... I think at least 2 TCSO cars, 1 APD K9, possibly a few Georgetown cops. .. Where was DPS?? No DPS ever came to the rescue... I think they go home and go to bed at 2am. This was around 4am when this was going down. For some unknown reason, TCSO asked everyone to stop spiking the offender.. I think they were worried about all the cops getting spiked. Man, DPS would have not let it go that long.. they shoot out tires or ram at the offender.

I don't know how every police car that gets spiked stops immediately... but this not this guy in his white truck... he lost both his right tires... and a front tire and was supposedly down to rims and then just axles with fire coming out the bottom of the car.. and was still doing 60 mph all through Round Rock and slowed to about 40mph all through Edward sector...(man what a truck) .. wake up Edward sector.. There is a pursuit coming back south. The same one you set up on about an hour before... whoops 40 MPH through Edward sector and not one Edward unit got behind him. Thanks for playing. Then on to Baker Sector... lucky for them, he finally wrecked out... APD was more interested in doing what APD does best... BLOCK THE INTERSTATE.... Both directions... Well I'd rater they do that then take over the pursuit and then call it off 3 mins later. Oh and they almost called for a negotiator and the whole SWAT team.. "wait a min guy.. don't give up yet.. our SWAT team needs to get here first and assemble and then you can surrender to them" I don't know how many times I have heard that one. Fortunately he surrendered to Travis Co.. rather quickly while APD was still working out the intricate plans to shut off the interstate.

Anyway.. it was EXCELLENT LISTENING even if it was at 4am .. This is the kind of stuff I live for.. very exciting to hear this stuff happen.. I wish I had a way to talk to them and link the radios and all myself.. Although exciting..it lasted way too long and cost these departments a lot of money with tires and wear on the cars and all.

Training officer recognized as part of EMS Week
Public invited to meet local EMS staff members

By Monica Polanco
AMERICAN-STATESMAN STAFF
Monday, May 17, 2004
Good training officers know when to stand back and when to step in.
Marco Villasenor is one of them, said Rob Curr, a training officer
coordinator for Austin-Travis County Emergency Medical Services.
"He is somebody that has a command presence and has a maturity about him,"
Curr said. "A lot of people look up to him for that."
Austin-Travis County EMS has recognized Villasenor, one of about 60 training
officers, as part of national EMS Week, which begins today. The week is
sponsored by the American College of Emergency Physicians and is used as an
opportunity to raise awareness about services the nation's 750,000 EMS
providers offer. Austin residents will have a chance to meet paramedics each
day during EMS Week.
Villasenor, originally of El Paso, joined Austin-Travis County EMS 4 1/2
years ago as a paramedic and is assigned to a station off East Rundberg
Lane. He is a former cadet of the year.
Villasenor trains a range of people, including cadets, students from other
paramedic programs and Austin Community College students. His trainees ride
in a rescue vehicle with him, tending to patients.
"You have to have the confidence and the ability to let the cadet run the
call without trying to jump in and take the call," Curr said. "You also have
to have the ability to see everything that's happening in that call and to
make judgments and guide the cadets in the right direction."
In September, Villasenor plans to visit Saltillo, Coahuila, where he will

teach pre-hospital medicine with fire and EMS workers.
It will be his third off-duty trip to Saltillo, a sister city of Austin's.
On previous visits with a co-worker, Villasenor distributed eight Automatic External Defibrillators, said Dave Williams, commander of quality services for Austin-Travis County EMS. The devices are common in Travis County but are a relatively new tool in Mexico.
Villasenor helped teach about 30 rescue workers last year.
"We have a lot in common -- that whole feeling of helping people," he said. "We all have that camaraderie of being paramedics."

2315. Fake bodies cause hubbub

Yahoo group: CenTexComm
Date: 2004-05-18 14:29:31 UTC
From: Robert
Topic: 2315 Message: 2315

http://www.statesman.com/metrostate/content/auto/epaper/editions/tuesday/metro_state_049a5bc802dfa1b3006f.html

I heard all this.. I am still not used to them sending all their stuff unless patients are confirmed.. I'm from Houston and LIFE flight never left the ground unless someone from a referring agency called and requested them. Here in Austin, they send STARflight on everything that even sounds remotely serious. It seems like very time I boater on Lake Travis has engine trouble or tips over, and they flag for help, it's an automatic rescues with STARflight and spec ops. This is interesting. I don't know if it was kids doing this or what.

Fake bodies cause hubbub

A fire truck, an ambulance, a STAR Flight helicopter and other emergency vehicles rushed to a cliffside near Lake Austin on Saturday afternoon in what Emergency Medical Services officials said turned out to be a fake emergency.

Somebody in an office building across the lake from the cliff and near the Capital of Texas Highway (Loop 360) bridge called 911 to report what looked like two dead or unconscious people, said Austin/Travis County Emergency Medical Services spokesman Randy Treffer.

Emergency crews found out later that the bodies were actually two sets of shirts and pants pinned together and stuffed with newspapers, Treffer said.

"I am quite sure . . . they were put there" to elicit an emergency response, Treffer said.

He said he did not think the person who placed the 12:30 p.m. emergency call was in on the ruse.

Bank robbery total reaches 27

Austin Police are seeking a man in the city's 27th bank robbery of the year, which occurred Monday afternoon at Guaranty Bank at 301 Congress Ave.

The man, who fled on foot with an undisclosed amount of cash, is described as 6 feet tall and 220 pounds. He was wearing a blue baseball cap, jeans, a gray shirt and sunglasses.

2318. AFD to TCFC patch problems

Yahoo group: CenTexComm
Date: 2004-05-19 17:01:08 UTC
From: Aaron Slaughter
Topic: 2318 Message: 2318

I heard something quite interesting yesterday. TCFC E-404 was responding to an incident near Mcneil Dr. and McNeil Round-Round. AFD E-28 was also responding to the same call. During the 10 minute response from E-404, the engine officer tried desperatly over and over again to make contact with E-28 to determine the status. AFD Dispatch could not effectively coordinate a patch between 2 channels. I am just curious as to why this was such a difficult task? I don't mean to cause any trouble or stir the SHxx pot, but I thought that with the upgrades to this multi million dollar radio system they would be able to have interoperability? At one time, dispatch patched Tac-4 with I think blue-5, but dispatch requested to unconnect the patch because it was creating more problems. Why couldn't they have simply patched TAC-4 with an interop channel? Wouldn't thay have made more sense? Isn't that was the interop channels are for? I have personally worked with motorola consoles patching 800 to VHF, and I does work effectvely. I wouldn't suggest using it on a permanant basis, but it helps with interoperability issues. If anyone from AFD here knows, could you please fill us in...or is it possibly a training issue with dispatch?

Aaron Slaughter

2319. Re: [CenTexComm] 125.325 MHz

All times CDT (UTC-6)
Uniden BC296D

I'm hearing two aircraft hanging out northeast of Austin. Their callsigns
sound like MAXIM. Could be MAXIE out of Dyess AFB, TX, I don't know.

1857 118.800 Austin App/Dep East. MAXIM 31 hanging out by Dell
(presumably Dell Diamond baseball field) doing 360's.

1901 MAXIM 32 working 125.650 Houston Center (Austin RCAG). Handed off to
Austin App/Dep. Given UHF frequency, pilot requested a Victor freq.
Given 118.800.

1901 118.800 MAXIM 31 asked if he could maintain an 11 to 12 block.
Notified ATC that MAXIM 32 would be joining him.

1902 118.800 MAXIM 32 checked in with ATC.

Sounds like the Longhorn CAP (as they're calling it) is closing. All
traffic is on 125.650. Tanker 12 is returning to MacDill AFB cleared
direct Humble. I couldn't tell of the F-16's were landing at KAUS or
returning to Cannon. The contacted Austin APP and I thought they were
landing, but then got clearance west.

I wanted to come, but the date didn't work out. I had to pick up the kiddo at the airport. It was also graduation weekend for some, the weekend before the last week of school and the weekend before memorial day.

I'd love to get together - maybe some other night, and get RSVP's from folks?

Mike :)

2333. The newer Uniden scanners will hear Austin.

Yahoo group: CenTexComm
Date: 2004-05-24 11:51:04 UTC
From: Robert
Topic: 2333 Message: 2333

The Radios available to hear Austin include the Uniden 296D (handheld) and the Uniden 796D (Base)
the 296D handheld is available at: http://www.usascan.com/files/bc296d.cfm
the 796D base is available at: http://www.usascan.com/files/bc796d.cfm

Included with the $519.95 price is: UPS Ground shipping, a headphone, standard antenna (but I would go to Radio shack and get the one with the orange 800 Mhz logo on it), a Ni-MH battery pack, ac adapter/charger, remote programming cable, and the programming software. These 2 radios decode 9600 baud trunking which the 250 model does not.

Also if you haven't already, check out the "home" page for CenTexComm which directs you to files, and photos and other items. There are currently 72 photos to see at:
http://photos.groups.yahoo.com/group/CenTexComm/lst

also a number of files at:
http://groups.yahoo.com/group/CenTexComm/files/
which include ones to plug into your program for the Radio Shack Pro-96 scanner and the above Uniden scanners.

2334. What table were you sitting?

Lots of smoke, no fire
5/24/2004 11:03 AM
By: News 8 Austin Staff

Several hundred state employees were forced out of their offices because of a parking garage fire at the Rusk State Office Building on East 10th street, near Brazos in downtown Austin.
A car fire in the parking garage caused a lot of smoke, but no flames.
The building was evacuated about 9 a.m. Monday. Several hundred people waited outside as crews cleared the building.
No one was hurt.

From: M.D. Boyer
Topic: 2343 Message: 2346

Read y'all's latest posts...and I'd like to throw out some late-night thoughts:

1. Based in part upon the government's latest briefing, it would seem that there may be a very sizeable number of al-Qaeda-affiliated sacks-o-crap now in country. They may have been (and probably were) here for some time. It wouldn't surprise me to find that a large number were recruited right here from amongst the myriad of middle-eastern visa holders (and others) living and working in the U.S.

2. That would mean that many of these insurgents could be "friends" and "neighbors" which would not be easy to detect. It's much easier (and perhaps more effective) to recruit this kind of attacker, rather than risk insertion from outside. I would like to think it is at least a little harder to get into our country these days...

3. Attacking us now (since the post-9/11 guard went up) would represent a much bigger psychological blow. It's very easy to say: "it'll probably happen here again"; it will be quite another if it actually does. We experienced shock and some hopelessness the last time. We might not hold together very well the next. The harder and faster we strike back (at already prime-target nation-states), the quicker we would recover. The longer we delay sufficent and sustained response (regardless of foreign loss), the worse it'll be for us, and the greater will be the terrorist's "victory". I believe it is important to say this because now is the time we the people need to prep our leaders, as we prep ourselves. We cannot afford to become as paralyzed as the last time. Swift and massive action (unequaled) will be required to make this stop (and I believe it can be stopped), and must proceed within hours after a potential attack to have maximum value. Now is the time to prepare ourselves psychologically for this. Our leaders should not wonder how to respond. It's our job to tell them now.

4. al-Qaeda knows it won't get many chances. The next attack may be massive. It also doesn't have to be just one attack either. It could be several, or many. We should be as prepared as we can be for a variety of assaults. They may well plan many events to fail, expecting to succeed in only 2 or 3 places. They may also wish to setup diversions. Just as they watch us, we must watch them.

5. Again, because we are such an open society, a number of possibilities abound. If attack is imminent, we must be prepared to respond massively and widely without regard for ordinary sensibilities. Excessive concern for foreign collateral-damage and world opinion is paralyzingly fatal.

Just a few thoughts.

Later.

Remember that the goal of terrorism is to frighten, not necessarily kill. 9/11 was the largest terroristic attack that I believe this world has ever known and it is my belief that they were attacking the structure, not the people in it. Mike is right in that they usually attack symbolic targets. Typically, a kill shot only takes down fewer than 100 souls (car bombings, suicide bombings, suitcase bombings, etc.).

Mike

StratFor.com said earlier this week that Houston, Dallas, and Austin were prime targets for terrorists. Houston is obvious, Dallas less obvious, but Austin?!?

I can't believe someone would want to destroy a local dam. Yes, it would cause property damage and loss of life, but not on the order of magnitude of 9/11, IMHO. Stranger things...

John

2348. Digital Scanning in South Austin - Buda/Kyle Area

Yahoo group: CenTexComm
Date: 2004-05-28 02:31:21 UTC
From: Mark Summers
Topic: 2333 Message: 2348

I am a proud owner of a Uniden BC245XLT scanner, but after a visit this week with some of Austin's scanner experts, was introduced to the Uniden BC296D/BC796D scanners.

My question to the masses are as follows:

1) What will I be able to hear on this new digital scanner that I can not hear on my current scanner.

2) Looking ahead, is this model likely to be obsoleted like my BC245XLT seems to be? I don't mind spending $500+ if I am confident it will be useful for the next five years or so.

3) Any thoughts about the advantages/disadvantages of the mobile (BC296D) model vs. the stationary (BC796D) model?

Thanks in advance.

Mark

The 250/785 will not decode the austin/travis county digital system. You must purchase the 296 or the 796 or the radio shack pro-96.
Also be warned when making the jump to digital scanning that the transmissions are not always that clear as you have come acustomed to in analog. It takes some getting used to. Also be prepared go go thru a learning curve with these new radios, they are a bit more complex than your 245.
These radios will serve you fine for the next several years (I'm guessing 3-5 years, who knows for sure though). Probably what may come out over the next several years would just be improvements or adding features to what is out there now.
To mention a few things, by upgrading to one of these newer radios you will now have alpha tags for your talkgroups and channels and be able to enter in and utilize pl and dpl codes on conventional freqs. I can't remember if the 245 covers mil air band. You'll also gain wideband fm reception too.
As for the 296 vs 796, its just your preference. They operate athe same and have the same features. Do you want a handheld or a mobile/base unit? The handhelds tend to be more popular though.
Hope this helps.....Sly

Sly,

Thanks for taking the time to respond to my questions. I have a couple more for you (or the other members) if you don't mind.

On my BC245XLT, I still seem to receive Austin/Travis County channels (at least some of them). I assume this is because they broadcast on both the new digital trunks as well as the old UHF channels. Is this what is happening, and any idea on how long they will broadcast on both and how much I am missing without the digital scanning capability?

Also, I receive (I think) Hays County traffic on the LCRA 900MHz system, and some are still broadcasting on the old UHF channels. Can you shed any light on this arrangement and what (if anything) I would gain with digital scanning capabilities in Hays County?

Along with Austin/Travis scanning, my main interest is in the Buda/Kyle/Creedmoor/San Marcos area. At this point I am contemplating selling my 245XLT (used ones regularly go for about on eBay) and use those funds to help pay for a 296D, but if I can still pick up most all of Austin/Travis traffic on the "old" frequencies and pick up Hays county on the LCRA system with my 245XLT, I might keep my 245XLT and wait on the next Uniden offering that corrects the digital transmission sound quality you mentioned in your first e-mail. However, the alpha tags would be a great addition, and it is fun to be on the "cutting edge" of technology.

Thanks again for your time.

Mark

2355. No digital in Hays Co, you gotta have a trunked radio to hear the tactical stuff.

Yahoo group: CenTexComm
Date: 2004-05-29 15:01:27 UTC
From: Robert
Topic: 2355 Message: 2355

There is NOT any DIGITAL stuff that I know of in Hays Co right now. The 245XLT is a very good scanner so I would keep it unless you just HAVE to sell it. I assume both Hays Co and Austin/Travis Co simulcast on traditional UHF/VHF frequencies to allow other agencies to be able to hear and possibly talk to them. For instance, you may have a DPS trooper that has the 155.865 for Hays co in his car or the 154.085 for Travis County. As far as I know, DPS troopers do not have the Hays Co or Travis Co system in their cars so these links are good for agencies like them so they can communicate. They are simulcasting some of the main channels from both systems but by not having the trunked system plugged in .. you would be missing a lot of tactical stuff, or car to car stuff. APD had a brief SWAT callout this morning and you would only have been able to hear that if you had a digital scanner tuned to the Austin/Travis Co system. Some people only want to hear the calls and they don't care about all that car to car chatter.. If all you want to hear is the calls, then you may not even need to get a digital scanner. We have no idea if or when they will UN-PATCH the radios. For about a week, APD George (downtown) and Charlie (Central East) were NOT being patched to their 460 frequency so you just never know when the patch will be up or down. Actually with Hays Co, I have heard the opposite.. where in the beginning, they were using the 155.865 but NOT simulcasting it on the 900 Trunked System. The key is listen to what they are saying.. if they say "go to so in so channel" and you suddenly don't hear them then check
http://www.radioreference.com/modules.php?name=TRSDB&sid=48
and if it's listed there with no link to a VHF frequency then most likely it will be something that you can only hear with the trunked system. Same with Austin or Travis Co.

If you look on the lists that are on www.radioreference.com , people have done the best they can to submit the talkgroups and their labels. But just because a group is listed, does not mean that it is active. For instance. with the Austin/Travis County System, I have only heard the Interops used a few times.. the last time It was used was a week ago when George Bush was in town. Also they are playing around on Interoperations G .. but it seems to be possibly between the computer room and the dispatch center. The APD Law 1-5 has never been used. nor have any of the Red talkgroups.. Nothing so far on Homeland Defense, and the only city parks talkgroup that is active is the Park Police. But man with Travis County parks, man they are all over the place.. they talk non-stop and especially this Memorial Day weekend..

BRAND NEW as of last night..they are patching LCRA talkgroup Ranger 1 02-072 with Travis Co talkgroup 3426 calling it command post out on Lake Travis.. this was just in time for the Memorial Day weekend but I assume they will

continue to use it.. The sad thing is that last night they called STARflight for a search and told STARflight to use intercity.. They didn't realize that STARflight had that 3426 Talkgroup and could have gone directly to that.

If you have the money and can afford it. yes.. go for the digial scanner so you can hear Austin and get alpha Tags.
But we have no idea what's around the corner and anything can change. What you buy today will be obsolete 6 months from now.

2356. RE: [CenTexComm] Digital Scanning in South Austin - Buda/Kyle Area

Yahoo group: CenTexComm
Date: 2004-05-30 12:55:07 UTC
From: Aaron Slaughter
Topic: 2333 Message: 2356

The City of San Marcos, Texas State University, and South Hays FD are the agencies that are pretty much completely on the LCRA System. Hays County SO still uses VHF (155.865, and 155.970) with 155.865 patched to the LCRA system so that they can communicate with San Marcos PD. As Robert said, there is no Digital radio traffic in Hays County, yet.

2358. Texas Regional Councils of Governments

Yahoo group: CenTexComm
Date: 2004-05-31 13:52:22 UTC
From: Edward Lentz
Topic: 2358 Message: 2358

A long time back Texas created the 24 Texas Regional Councils of Governments to assist in coordination of varous government functions. One of them was to assist in the conversion of low band radios to high band radios. At that time each COG was assigned a PL or tone for their respective area. Back in the early 70's there was not near the amount of radio users (Houston PD had a North side and South side dispatch) so coordination of tones was not a big problem. Today many rural areas are able to maintain their suggested tones without any difficulty while many other areas it's impossible due to the number of radio users.

If you look around in these websites you will find the planning commission plans for the new radio systems that will be implemented in the next few years.

To start looking into Texas COG's go to this link.
http://www.txregionalcouncil.org/

Here is I hope a complete list of each COG.
Texas
a.. Alamo Area Council of Governments
b.. Ark-Tex Council of Governments
c.. BCSMPO- Bryan-College Station MPO
d.. BVDC-Brazos Valley Council of Governments
e.. CAPCO-Capitol Area Planning Council
f.. CAMPO - Capital Area Metropolitan Planning Organization
g.. Central Texas Council of Governments
h.. Coastal Bend Council of Governments
i.. Concho Valley Council of Governments
j.. Corpus Cristi Metropolitan Planning Organization
k.. Deep East Texas Council of Governments
l.. East Texas Council of Governments
m.. Golden Crescent Regional Planning Commission
n.. Heart of Texas Council of Governments
o.. H-GAC, Houston-Galveston Area Council
p.. Lower Rio Grande Development Council
q.. Middle Rio Grande Development Council
r.. Nortex Regional Planning Commission
s.. NCTCOG-North Central Texas Council of Governments
t.. Panhandle Regional Planning Commission
u.. Rio Grande Council of Governments
v.. San Antonio-Bexar County Metropolitan Planning Organization
w.. Sherman-Denison Metropolitan Planning Organization
x.. SETRPC-South East Texas Regional Planning Commission
y.. SPAG-South Plains Association of Governments
z.. South Texas Development Council
aa.. Texoma Council of Governments

2359. Texas Area Planning Councils

Yahoo group: CenTexComm
Date: 2004-06-01 20:32:59 UTC
From: David Litsinger
Topic: 2359 Message: 2359

Ed.
I think a while back I posted some stuff in the File section of this site listing all the texas Counties and the original planning council they belonged to. Set up my basic Texas books based on this system. Have one notebook for CAPCO so I dont have to sort through dozens of counties just to go from Travis to Bastrop County.
Dave Litsinger.

2360. FBI Issues Alert For Propane Trucks Stolen In San Antonio

Yahoo group: CenTexComm
Date: 2004-06-02 17:22:03 UTC
From: Robert
Topic: 2360 Message: 2360

SAN ANTONIO -- The FBI issued an alert Monday for two propane trucks and 15 gas canisters that were stolen over the Memorial Day Holiday weekend in San Antonio.

FBI Agent-In-Charge Patrick Patterson, of San Antonio, said the possibility that the propane could be used to create a bomb prompted him to notify the National Joint Terrorism Task Force in Washington and law enforcement officials in Texas.

"We've had recent reports of al-Qaida's desire to attack the United States," Patterson said. "And we have to be vigilant to these kinds of theft reports."

San Antonio Police Chief Albert Ortiz called the theft of the propane trucks from Ferrelgas on the city's southeast side "a very professional job."

Ortiz said the individuals cut a fence and broke a lock to get away with the trucks, one of which had a 2,000 gallon tank, and another that had 3,000 gallons. Both tanks were 85 percent full.

Patterson is also concerned about 15 canister tanks that were stolen from an ambulatory surgery center. Four of the tanks contained nitrous, three had carbon dioxide, three contained oxygen and four of the tanks were empty.

Patterson said he didn't know if the contents of the tanks could be mixed to make a weapon of mass destruction, but he offered another scenario.

"The tank could be emptied, and other items (could be) put in it to make it an improvised explosive device," he said, "which would be essentially a bomb."

One truck has Texas license plates 8WXW38 and the other has Texas license plates 7FFR20.

2362. New Uniden Scanners (5)

Yahoo group: CenTexComm
Date: 2004-06-02 18:58:39 UTC
From: Robert
Topic: 2362 Message: 2362

From: Radio Scanner Discussion Forum [mailto:SCAN-L@...]

Just in case the word hasn't made it to your email mailbox, here is the latest from the world of Uniden. The BC-246T radio looks real interesting in two areas, the dynamic memory management and the Close Call RF Capture technology.

We should see this radio around the September timeframe and the rollout cost should be a bit more than the BC-245XLT which it is replacing (the 898T has NOT been type accepted so exact cost cannot be disclosed at this point). Of course we will be seeing the BC-898T shortly (FCC type accepted) and three more Uniden scanners are on the horizon as well (not FCC type accepted). More on them soon. Five new scanners in one year, not bad!

73 all and good hunting,

UNIDEN ANNOUNCES BC246T COMPACT TRUNKING SCANNER
Close Call☐ RF Capture Technology Unveiled

FORT WORTH, Texas, June 1, 2004 - Uniden America Corporation today announced its latest trunking scanner, the BC246T. Representing the first in a new generation of compact handheld scanners, the BC246T introduces several innovative new features, including Uniden☐s exclusive Close Call☐ RF Capture Technology. The BC246T will be available in the fall of 2004.

The BC246T uses a new dynamically allocated memory system, allowing the user to program its 3300+ channels into any configuration desired. While traditional scanners have been limited to only 10 banks, the BC246T groups channels into systems, allowing for 50 or more systems to be programmed and scanned simultaneously. Systems can still be quickly enabled or disabled using the 0-9 keys, and each system can have up to 10 groups of channels that are also available for quick selection. Uniden☐s exclusive Close Call☐ RF Capture Technology zeroes in on nearby transmissions without the need for programming, even when the BC246T is in other modes, scanning, searching or holding on a frequency. For example, if someone transmits within a few hundred feet (range depends

on transmit power and other radio traffic in the area), the scanner immediately detects and tunes to the transmission, ideal for use at events when the frequency being used is unknown.
☐Customers have been asking for smaller scanners, more flexible programming and more features, and this is what we set out to deliver,☐ said Paul Opitz, Uniden product manager. ☐Continuing Uniden☐s leadership in scanners, the BC246T brings scanning technology to a new level.☐

The BC246T comes complete with two NiMH AA batteries, internal recharging, PC programming and control. Key features include:

Compact Size (4½☐ x 2¾☐ x 1¼☐)
TrunkTracker III Technology (Motorola, EDACS, and LTR Analog Trunking)
Comprehensive Analog Trunking including I-calls, Emergency Alert, Trunk Search and ID Blockout
Up to 3300 Channels, Dynamically Allocated
System, Channel Group and Channel Alpha Tagging
25-54, 108-174, 216-225, 400-512, 806-956, 1240-1300 MHz Coverage
Close Call ☐ RF Capture Technology
SAME Weather Alert
10 Programmable Search Ranges
12 Preprogrammed Service Searches
Backlit Display
CTCSS/DCS Rapid Decode

Most everyone here is familiar with Lindsay Blanton's excellent resource,
http://www.radioreference.com . RR offers forums, but it was impossible
to track all of them unless you had a lot of time on your hands. Well,
problems solved!

RSS stands for "really simple syndication" and it's a method of providing
web content. You will need an RSS reader (use Google to find one). I
personally prefer web-based http://www.bloglines.com . With an RSS you're
notified whenever anyone posts to any RR forum. I can catch up on all of
the postings in just a few minutes.

The RSS feed can be found at:
http://www.radioreference.com/modules.php?name=Forums&file=rss

YahooGroups that have open archives can also be tracked with an RSS
reader. An example is TexasScan.

http://rss.groups.yahoo.com/group/TexasScan/rss

CenTexComm has closed archives and I do not plan to change this.

From: Steve S. Bosshard (NU5D)
Topic: 2366 Message: 2366

Where would you recommend, and what model would you choose for the best possible scanner to cover 800/900 plus Low Band, VHF and UHF?

Channel Guard and Digital Channel Guard sure would be nice per channel.

Astro Digital, Type2, EDACS, LTR, Project 25 digital

Decent adjacent channel rejection, and IMD performance.

Computer Interface.

Wide and Narrow band channels, 11K0F3E and 20K0F3E.

Digital HDTV Audio?

And

What price range should I expect?

Thanks in advance,

Steve

It doesn't exist.

If you plan on monitoring Austin, you'll need one of these: Uniden BC296D,
Uniden 796D, or a Pro-96.

The Uniden 565D looks nice - Is there a Texas based dealer selling these?
I would rather deal with someone that has a store front than mail order,
even after taxes.

Also, is there anything else out there, AOR, Icom?

The part about digital TV audio. You mentioned some other modes that
I have never heard of, so I'm assuming no scanner decodes them.

Well I think the closest your gonna get is the uniden 296d or the 796d.
No scanner will do digital tv audio (yet at least)
As for a local dealer not sure of one, I think there might be 1 or two
in Houston I thought I remember reading about years ago but I'm sure
you'll pay considerably more and plus sales tax if you find it locally
than mail order. I don't mind either paying a little extra if its avail
local but when the local joint wants a $100-$150 more than mail order
then plus tax its hard to do such.
Since these high end scanners are in such a niche market not that many
dealers across the country.
Due to their wideband capabilities all scanners are going to suffer
somewhat from adjacent channel rejection and intermod and front end
overload (desensing) esp in strong rf areas. Compared to a $2000+
commercial one band radio they sort of suck but they have gotten a lot
better within the last 10-15 years.
Icom, Yupiteru and AOR make good scanners with decent rejection and such
but none of theirs does any form of trunking or digital.
The uniden 296d and 796d goes for around $520 mail order.
Austin Amatuer sells Icom products, so they might have or can get the
Icom communication receivers but I know they don't sell scanners at all
(like Uniden)

Not familair with the Uniden 565d, can you give a link to it or shed
some light on this radio?

Topic: 2366 Message: 2371

If you want the latest greatest scanner with all the bells and whistles.. then you will want one of these scanners:
This includes the Uniden BC296D (handheld) and the BC796D (base) radio at about $520 each. You can easily do a search on the web (including ebay) for these radios

One of the Uniden vendors is www.usascan.com

Radio Shack carries the Pro-96 (handheld) @ www.radioshack.com and search for the Pro-96 which essentially does the same thing as the Uniden handheld. Both have good and bad features. The Uniden has a total of 1000 channels that you can scan at one time, and it's price includes a battery pack that you pretty much have to deal with, the A/C adapter and limited programming software and a cable. The Radio Shack Pro-96 sells for $499.95 and that price doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&site=search)

or software (http://www.starrsoft.com/software/win96/default.asp) but at least it does use regular batteries and not a battery pack. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283
(http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

The Radio Shack Pro-96 also has a necessary software upgrade that will have to be done if it is not already loaded onto the scanner. It can be found at:

http://www.radioshack.com/images/ProductCatalog/Manuals/2000526_DL_instructions.pdf

This software upgrade is REQUIRED before you can property monitor Austin so that means you have to have the cable immediately which Ironically they seem to always be out of stock on.

I am not aware of the UNIDEN scanners being sold locally but i'm sure you may find them. I STRONGLY recommend mail order for them as you will find it cheaper.

Wes:

We soft patched TCSO Event 1 to Tac Blue 16 to allow our units responding to calls at the Expo Center during ROT to communicate directly with the deputies. We are still using using TCEMS to communicate with the MSET 1st responders who are on site out there as well.

The patch will be taken down at the conclusion of the ROT event.

2382. Bank robbery booming in Austin, Texas

Yahoo group: CenTexComm
Date: 2004-06-16 03:32:16 UTC
From: Robert
Topic: 2382 Message: 2382

Interesting CNN article about Austin's rash of bank robberies. You would think with all the tools we have here like the rat packs, a police helicopter, and a digital radio system that links county and city agencies, that we would be able to fight crime. On the contrary, whereas the FBI in Dallas has agents that are always on patrol, waiting for robberies to occur, I think the Austin FBI office has like 3 agents. Maybe it's time for the feds to take notice that we need to start allocating our resources in other areas.

Bank robbery booming in Austin, Texas
Most aren't professional jobs

AUSTIN, Texas (AP) -- A wave of bank robberies is breaking over the Texas capital city, and while the uptick in heists has authorities concerned, they're not exactly on the lookout for a gang of savvy bandits.

Austin banks have been robbed 30 times so far this year, a remarkable spree given that during all of last year, only 18 such crimes were reported. Still, the spike seems far from organized.

"Most of them aren't what you would call professional," said Austin Police Lt. Charles Black.

Quite the contrary: Nine suspects have been arrested in 20 of the robberies, which have yielded sums ranging from $400 to $10,000. Some have bumbled their way to easy capture, or kept their patterns predictable enough to lead police right to them.

And most -- white or Hispanic males in their 30s and 40s -- are motivated by the need for quick drug money, Black said.

Across the nation, bank robberies are on the decline. FBI figures show there were 8,528 bank robberies in 2001, 7,703 in 2002, and 7,357 in 2003.

"Historically, Austin has not had a lot of bank robberies," Black said. "That's why we've been somewhat shocked by the number we've had this year."

"Cowboy Bandit" Ernest Rodriguez Jr., of San Antonio, allegedly robbed five Austin banks this year before he was arrested in April. The nickname came about after bank surveillance cameras showed a robber wearing a large cowboy hat that concealed part of his face.

Rodriguez, 44, blazed his trail through Austin banks to support a heroin addiction, Black said. His criminal record includes an eight-year prison sentence for theft and drug possession.

Rodriguez kept authorities guessing for two months, hitting one bank after another while as many as 60 officers and employees worked to stop him, Black said.

A computer program was developed to identify the robber's likely next target, calculating similarities with other banks that had been robbed, such as the lobby layout and the proximity to getaway routes. The FBI assisted in the investigation.

Rodriguez was finally caught at the Travis County Credit Union, where two plainclothes officers were waiting. He now faces up to 20 years in prison on each of five counts of bank robbery and another 10 years on a charge of being a convicted felon in possession of a firearm.

Another suspect, Thomas Thompson, was also charged in five robberies. Thompson told investigators he went on his two-week crime jag in February to support a drug habit, Black said.

Jack Levin, director of the Brudnick Center on Violence at Northeastern University in Boston, draws a direct link between the war on drugs and the spike in bank robberies. He said many low-level dealers and users locked up for a few years on drug charges may now be returning to the streets.

"They are coming back into the community," Levin said. "They've graduated from the drug trade."

Austin's latest robbery occurred June 9 when two men wearing baseball caps and bandanas to conceal their faces brandished a weapon at a southwest Austin credit union and fled with an undisclosed amount of cash.

What made that robbery unusual was that a weapon was used; most of the thefts this year did not. The robbers either demanded money or slipped a note to the teller. Some fled in cars, others on foot. A few were caught right away.

One robber took his pants off about a block from the bank, hoping a change of clothes would confuse witnesses and police. But he left his wallet and driver's license in the pants pocket. "We got him within an hour," Black said.

Another robber was hardly a block away when a dye pack hidden in the money exploded on him. Police were still arriving on the scene when they spotted the robber and arrested him.

Joe Olivas, vice president of security for Wells Fargo, which has had seven Austin branches robbed this year, said the company trains employees to watch for suspicious behavior and to react during robberies.

"We discourage anybody, either employee or customer, from taking action that would be a danger to themselves or anyone around them," Olivas said.

Despite security cameras, most robbers don't wear masks or disguises, either, Olivas said.

"Most bank robbers want to walk into any financial institution and go unnoticed," he said. "They want to walk up and take the money."

I was wondering if it would be possible to get frequencies for any traffic over the water, such as the port authority, coast guard or like if there would even be any interesting things to listen to??

2385. Radio Issue

Yahoo group: CenTexComm
Date: 2004-06-21 17:37:00 UTC
From: Mike Reed, LP
Topic: 2384 Message: 2385

So I had my first interoperability issue this weekend with the new radio system. Let me be clear - this was not a hardware problem, this was a design/patch problem.

Working as a Mustang Ridge PD officer, I was dispatched to a rollover MVA in our city. Travis County Fire Rescue (formerly SETCO) and A/TC EMS were dispatched. TCFR is dispatched by AMR on a VHF frequency, and they notify AEMS they're enroute on EMS County, VHF patched to 800.

Once on scene, with my portable, I had *no* link to TCFR's frequency. Yes, I could contact them on EMS County, but what I really needed was to talk to them on their primary (they were asking about StarFlite, etc.). I also wanted to advise them of their best entry (vehicles in the roadway, etc.).

It was frustrating. Additionally, I didn't have the time or inclination to ask TCSO or AEMS to hot-patch a talkgroup... things were already moving and there wasn't time to wait for it.

The solution? I don't know. Maybe create interop groups for those folks who are dispatched by AMR? Or maybe an AMR-PATCH talkgroup that anyone who uses AMR for dispatch has a "secondary" channel that's the same for all agencies, much like an AMR-INTEROP or something?

Ideas? For now, I'm going to start carrying my old VHF radio, too... just in case.

Mike :)

Round Rock has been using trunked radios for several years now (they were using it when I moved here in 1996), and just in the last year or 2 have they really made better use of capabilities.

When ever a medical call goes out, RR Dispatch sends a Fire unit and puts him on a Fire TAC channel. At then same time Williamson County Dispatches an EMS unit and assigns them an EMS Scene channel. At this point RR Dispatch patches the Fire TAC and EMS Scene together so the 2 units can talk. It is SOP for dispatch to do this. Before the days of HELO1 they used to patch StarFlight on their VHF freq onto the TAC channels, now they either switch the landing zone IC to HELO1 or patch it on top of the TAC channel (depending on dispatcher and size of incident).

If a major accident comes in (loosely defined as a roll over or something with injuries) the Police are also dispatched to the same scene and put on a PD TAC channel. In this case, RR Dispatch patches all 3 together (announcing "Multi agency patch activated") until somebody gets on scene and down grades the call, or the PD IC or FD IC decides the patch is no longer needed.

Williamson County does this on their channels - patching Jollyville Fire VHR with EMS Scene channels. They even do it on calls where Deputies and Constables are going to the same call, patching each others appropriate TAC channels together.

This type of coordination sounds like what you are looking for. This way all of you could be patched together For it to work, it needs to be part of somebody's SOP to automatically do it because you are correct, you don't want to have to wait too long for it. It also takes the dispatch crew getting used to doing the everyday tasks comfortably, then moving up to more specialized tasks.

Just my thoughts from having listened to Williamson County, and now being a user of the system volunteering for RRPD.

George

2388. Radio Issue Communication / Coordination

Yahoo group: CenTexComm
Date: 2004-06-23 12:04:22 UTC
From: Robert
Topic: 2388 Message: 2388

About a week or so ago, STARflight was called to Georgetown assist with Search and Rescue at one of their swimming resorts. I wasn't following the whole thing but there was a lot of discussion about getting STARflight to switch over to one of the "Helo" channels so they could talk to them. Well all of Williamson Co has mainly been using Stat Air and Critical Air and it's rare that Starflight goes into Williamson Co anymore, so they did not have that channel in their radios. I'm not sure what they ended up doing but it messed them up, not being able to directly communicate with STARflight.

One of the main primary arguments for needing a new radio system, was the ability to coordinate communications among agencies. They do drills all the time to try and work together trying to get lines of communication working. They can do this in several ways and Williamson Co has finally found a way that works by having each agency on it's respective channel but being able to patch them all together for the brief period that they need to be patched. It just takes time to get all the communications people trained and comfortable in learning how and authorizing them to patch radios. I seem to remember someone saying that there was only one computer in the CTECC that can combine talkgroups and it's locked up and un-accessible to all but about 4 people who are most likely not there late at night and in meetings most of the day. What good is that? Also, it seems that most people just don't know how to do it. The new system has a lot of features, but it doesn't help if they don't know how to use it.

Someone was talking about EMS and how things are done up there in dispatch. I would love to see the new digs that EMS has as I have not seen them in several years. The last time I was up at the 715 E 8th location for EMS dispatch in 1999, the typical night shift would be about 4 or 5 of them all in big Lazy Boy or Craft-o-Matic type chairs.. they had rented a movie and popped popcorn and were all watching a movie with blankets and pillows. It was very casual, very relaxed. They had an exercise bike there and seem to do the movie thing a lot. AFD had beds and usually at least one of them is asleep since I think their shifts are still 24 hours. Not sure why they do that, getting paid to sleep vs. and 8 hour shift but it just seems to be the way they do it. AFD was always famous for cooking food. They would typically make breakfasts and sell them to everyone. APD didn't have Lazy Boy chairs, or exercise bikes, and they hardly have time to lean their chairs back and cover up with blankets and pillows and watch movies but they did have a commercial popcorn machine with all the free popcorn you can eat. The dispatchers also had just gotten use of a TV with cable and we would watch COPS or other TV shows all night long.. whatever was on. Well at least it was on in the room with the volume low if you had time to watch it. 911 operators were jealous because they were in a different room down the hall and didn't have a TV. Bear in mind all this is at night when things

are a little slower and the brass was not around.

http://www.radioshack.com/Coupons/Coupons.asp?cookie%5Ftest=1
<http://www.radioshack.com/Coupons/Coupons.asp?cookie%5Ftest=1&hp=coupons>
&hp=coupons#

Is offering $50 off the Pro96 scanner, so reg price is $500 and sale price is $450 ($449.99). If that will help in your decision to buy one. If the above link does not work go to www.radioshack.com <http://www.radioshack.com/> and click on coupons. You can print it out and take it into a store. You also, may be able to apply for their new credit card and perhaps get an additional discount but you'd have to ask.

Yes this scanner will let you hear the new Austin/Travis County DiGiTaL Trunked Radio System. However the scanner doesn't come with any accessories.

The price doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&site=search> &category%5Fname=&product%5Fid=20%2D289&site=search)

or software (http://www.starrsoft.com/software/win96/default.asp) but at least it does use regular batteries and not a battery pack. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 (<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283> http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

The Radio Shack Pro-96 also has a necessary software upgrade that will have to be done if it is not already loaded onto the scanner. It can be found at:

http://www.radioshack.com/images/ProductCatalog/Manuals/2000526_DL_instructions.pdf

dispatch in 1999, the typical night shift would be about 4 or 5 of
them all
in big Lazy Boy or Craft-o-Matic type chairs.. they had rented a
movie and
popped popcorn and were all watching a movie with blankets and
pillows. It
was very casual, very relaxed. They had an exercise bike there and
seem to
do the movie thing a lot. AFD had beds and usually at least one
of them
is asleep since I think their shifts are still 24 hours. Not sure
why they
do that, getting paid to sleep vs. and 8 hour shift but it just
seems to be
the way they do it. AFD was always famous for cooking food. They
would
typically make breakfasts and sell them to everyone. APD didn't
have Lazy
Boy chairs, or exercise bikes, and they hardly have time to lean
their
chairs back and cover up with blankets and pillows and watch movies
but they
did have a commercial popcorn machine with all the free popcorn you
can eat.
The dispatchers also had just gotten use of a TV with cable and we
would
watch COPS or other TV shows all night long.. whatever was on. Well
at
least it was on in the room with the volume low if you had time to
watch it.
911 operators were jealous because they were in a different room
down the
hall and didn't have a TV. Bear in mind all this is at night when
things
are a little slower and the brass was not around.

Noticed Copperas Cove has their EDACS up and running ? some clear voice ?
mostly digital voice.

Also, Stat Air ? Scott and White has been using NPSPAC seems like ch 601 and
621 tone 156.7, to talk to Williamson Co/ Georgetown.

That is generally why they break down the multi agency patch. Once everybody is at the scene it is generally easier for the Fire IC just to talk with the Police IC, they generally try to be near each other visically just for that reason.

> > If a major accident comes in (loosely defined as a roll over or

>
> EMS can't downgrade it from their perspective?
EMS is generally the last one there or they arrive with Fire. On some calls they might cancel Fire if they know all they are getting is refusals, but there is something comforting about having that big fire truck at the end of the line in the accident (I definitely would rather someone hit that than me or the "small" car I am riding in.

As you indicated it is all a matter of training and having everyone on the same page during major responses. As with any tool, you can go to many classes to see how to use the tool, but you really don't start learning the tool until you actually start using it. Of course the end users like Mike (and me too) wish the learning curve was a bit quicker.

I may have my terms wrong, but my understanding is that Provoice is used with multisite to enhance roaming and handoff between sites.

In digital I refer to an imbe vocoder digitizing voice and running 9600 baud through the repeater. I don't know if they are running encryption or not, as in Aegis or DES.

We just monitored the control channel a little plus a few of the repeaters and don't have the full story yet.

ok sooo is it p25 compatible?
You maybe correct about the provoice thing. I thought that "provoice"
was merely the edacs version of digital comms (non p25 digital).

I have taken my scanner down to San Antonio a while back which a
provoice system and the scanner totally ignores all the digital stuff,
even talkgroup display. While it trunktracks it as an edacs system, the
scanner stays completely silent unless an analog talkgroup popped up.

This is the radio Configuration for APD. if Anyone can take it and fill it out for AFD or EMS that would help.
I need to know the names of these channels to help try to identify them.
IF anyone has a radio and can call me and will key up the channels, I can see what talkgroup matches what channel description. WE need help with this..

Gosh I hope no one around here plans on going to 700 mhz.. I'll need yet another scanner..

DPS Is always the first to get a license on a new band to check it out.

Speaking of DPS I have been hearing 155.445 repeat onto 158.970 any ideas??? It seems to be a real weak transmitter around Highland Mall...

2409. why 700 mhz ?

>
John!

Wazzup! Long time no email.

Yeah, IIRC the build-out date for the DPS license was 2012 but in theory they could be testing now which leads into the reason I asked. First, a little background:

I'm trying to figure out how APCO P25 systems send out their frequency map to the mobiles. Motorola systems use a formula to map channel numbers. EDACS (and LTR) requires a table to be programmed into each radio. But P25 is a little different.

The cool thing is the information is broadcast over the air so it can be used to map out the channels for each site.

P25 systems can have up to 16 different maps. Each map can represent up to 4095 channels. A P25 channel is composed to two parts: the channel identifier and the channel number. The identifier selects the map. The channel number is plugged into the map function to come up with a TX and RX frequency. Below are some examples of four (hex) digit channels. The first digit preceding the dash is the identifier. Notice the channels that start with a "1-" below ...

Here are some live examples:
channel 0-40A(857.4688)
channel 0-461(858.0125)
channel 0-462(858.0187)
channel 0-561(859.6125)
channel 0-98D(866.2875)
channel 0-C80(871.0062)
channel 0-F00(875.0062)

channel 1-040(762.4063)
channel 1-180(764.4063)
channel 1-2C0(766.4063)
channel 1-400(768.4063)

While examining live data, I'm seeing two identifiers in use: identifier 0 and identifier 1. Identfier 0 corresponds to a default mapping for 800 mhz. I've confirmed the control channel on this map. Identifier 1 is explicitly broadcast over the control channel. Identifier #1 shows a base frequency in the 700 mhz range. So far I'm seeing telephone patches

using these 1-XXX channels.

Right now I've got two possibilities: either I'm mis-interpreting the control channel data and the 1-XXX channels are bogus OR someone is actually using those channels. Perhaps I (or someone here) can confirm traffic on these channels. They could be for phone patch or data services. I'll have to dust off my old Sony Wavehawk - I think it covers 700 mhz.

Regards,
Rick

Well 158.97 was always supposed to be used by TABC as some sort of handheld frequency or something.. I really only hear it one the way home every day around the upper deck and on I35 to about Braker.. It seems to be low powered around the Highland Mall already but is definitely repeating 155.445, Capital DPS.

Somebody asked and I forgot the term but what is Leander Police using.. it's some sort of encryption.. so even though it says APCO 25.. you cannot hear them using a Pro96 or BC296D or BC796D.. Also what (scrambling method) is Capitol police using on 460.075 the other capitol police, the ones that stay on the capitol grounds.

2411. PRO-96 control channel dump/display utility

Yahoo group: CenTexComm
Date: 2004-07-04 05:22:49 UTC
From: Rick Parrish
Topic: 2411 Message: 2411

PRO-96 owners that have the appropriate programming cable can now use their radio to display APCO P25 control channel activity. Folks familiar with Trunker/ETrunk and the associated programs Dumper/EDump have had the ability to do so for Motorola and EDACS systems using a discriminator tapped radio and a small, cheap and easy to build circuit called a data slicer.

Now PRO-96 owners can display comparable P25 information without the need to a discriminator tap or special circuitry. Look in the Files section for the program "pro96dmp" which will display the control channel messages sent out by the system to the mobile and handheld radio.

Instructions:

Unzip the pro96dmp.exe to a directory.

[optional] Create a shortcut to the EXE. For the command arguement, type the name of the serial port that connects to your PRO-96.

Attach cable to computer and PRO-96.

Power up PRO-96.

Select an active APCO P25 system.

On the PRO-96, press PRG FUNC PRG PRG.

Double-click on the short cut or run the program pro96dmp from a command line as in the following example:

C:\> pro96dmp COM1

If everything is working correctly you will see output similar to the following:

-BB 00 00 BE E0 91 3E 09 8D 60 9B 8B 9B8B Network Status Broadcast Mfg 00 LRA 00 WACN BEE09 Sysid 13E channel 0-98D(866.2875)(voice service requests only,registration services only)

Yeah, I smell royalties. I just purchased my PRO-96. Dare I say it's already broken-in but yeah I'm very leary of the need to accomodate yet another public safety band in the near term. My guess is *if* there is any public safery traffic on 700 mhz, then it is data, not voice. This being Texas then as such it is off-limits (Texas Criminal Code since September '98) and I'll go looking elsewhere for amusement.

>I'd like to see a digital scanner with gobs of memory (megabytes), very configurable, ability to hear ProVoice, maybe even Tetra compatable (or whatever that European format is).
>
>
On the "very configurable", we are long overdue for a radio whose core operating parameters (other than basic band limitations) like AM/FM/SSB and FSK/PSK/GMSK, etc. are programmable. GNU radio should help emphasize this. Buy a radio, download whatever protocols you like. Java (eg. J2ME) perhaps?

MPT1327 - definitely. Tretra - maybe. Tetrapol (which is very different from Tetra) - most likely not! ProVoice and Open Sky - nope, sorry - at least not this week!

Regards,
Rick

2413. Use of Interop talkgroups may correspond with sector

3401 d49 D INTEROP F APD Interoperations F Austin Law Enforcement
3402 d4a D INTEROP G APD Interoperations G Austin Law Enforcement
3403 d4b D INTEROP H APD Interoperations H Austin Law Enforcement
```

I have usually only heard traffic on Interop A, and just figured that would be the first one they would use, as they did with the Bush Visit to Moonshine during UT graduation. But yesterday, I heard Interop G and traffic with officers at 4th and Colorado and realize that they may have picked that one since they were in "George" sector. Later on I heard fireworks traffic on Interop D, which could have been in David Sector.. Not sure if this is the thinking and if that would be real obvious or not cuz it wasn't to me.. especially since they don't have an Interop I for Ida Sector.

2414. Uniden BC296D - Now what do I do

Yahoo group: CenTexComm
Date: 2004-07-05 22:55:45 UTC
From: silly31freak
Topic: 2414 Message: 2414

I recently upgraded my Bearcat 245XLT to a new Uniden 296D digital scanner. I uploaded the Austin ssd file that is posted hereusing the suppoied software, but am clueless as to where to go from here. I see several enties on radioreference.com, but don't really know where to start.

I guess I am looking for a couple tips to get started on learning to program this new radio. I am mostly intereted in Hays county frequenciues.

2415. Using the .ssd file with the Uniden BC296D for Hays co

Yahoo group: CenTexComm
Date: 2004-07-06 13:54:45 UTC
From: Robert
Topic: 2414 Message: 2415

The SSD file that is in the files section. I believe bank 10 lists the LCRA North Austin tower. So, you can go in there and edit that data with the San Marcos Tower. Basically looking in www.radioreference.com you look up the LCRA system and see the San Marcos tower consists of these frequencies:

935.4625, 935.9250*, 937.9750, 939.1500, 939.5000, 935.3875, 935.9750, 937.9500, 938.4625, 938.9500

So you will go in and put the frequencies over the other ones. If you are using the same bank (10) you will not have to make any changes with the settings if you want it on another bank then you will need to set it for Edacs wide.. Just look at and make note of the settings so you can use another bank for another tower if you get better reception on that tower, such as the Creedmoor or Comal Co tower. The best way to figure out what tower you are receiving the best is to search from 935-940 and see what control (buzzing) freq is the strongest and then find that frequency on the list to see what tower it is. Most of the control channels have a * next to them.

You will also probably want to add some more talkgroups on the right.. particularly the ones that pertain to Hays co so when they talk, you will know who they are.

save the data in a file you can remember and then upload the data to your scanner. You should be set to go.

Remember, you can put regular VHF and UHF frequencies in to the same bank as a trunked system but you cannot put two trunked systems in the same bank.

Any other questions??

2416. Keyless Remotes To Cars in Waldorf Suddenly Useless

Yahoo group: CenTexComm

From: Rev. Sean Farrell
Topic: 2416 Message: 2416

Keyless Remotes To Cars in Waldorf Suddenly Useless

By Joshua Partlow
Washington Post/ July 5, 2004

Vernon Garrison was stuck at the supermarket -- outside, actually, in the front seat of a navy blue Caprice Classic that would not start.

His keyless entry remote control, the device that unlocks the doors and also is required to start the engine of his car, had gone haywire again. "I was furious," said Garrison, 67, who owns a gas station and, fortunately for him, another car.

For 20 minutes as he waited for help, Garrison watched keenly as several customers came out of the Shoppers Food Warehouse in Waldorf, aimed remotes at their cars and failed to open their doors. Point, push, nothing. Just as he thought.

"I could see them walk up," he said, remembering that afternoon two months ago. "I'm saying, 'It's not going to work.' "

Matt Drake has seen this, too, and wishes he had an explanation. He works at a Radio Shack across Route 301 from the grocery store.

"Volvo, BMW, Mercedes, it does not discriminate," Drake said, pointing over the counter to the strip mall parking lot. "If every single one of those cars has a keyless entry, every single one will not work."

The sporadic incidents -- at least five days in the past year, by Drake's count -- have become something of a mystery in Waldorf, a sprawling mix of shopping centers and subdivisions in Charles County. But such outages are not unprecedented.

Three years ago, thousands of drivers in Bremerton, Wash., were stumped on two occasions when their push-button remotes proved impotent. It happened in Las Vegas in February, prompting hundreds of calls to car dealerships and locksmiths. And in May, a two-way radio system being tested at Eglin Air Force Base in the Florida Panhandle jammed remote control garage door openers in communities near the base.

In most cases, remote control failure is little more than a curiosity, as drivers can simply use their keys to unlock the doors. Some cars, however, require the device to deactivate an alarm or start the engine. Charles Vernon, a retiree from Accokeek whose remote first malfunctioned at the mall in Waldorf on May 10, said the problem is a safety issue and an inconvenience.

"You don't buy the car not to be able to use it," he said.

There is no shortage of speculation on what is causing the problem in Waldorf. Diana Rucci, the operations director at Waldorf Ford, overheard customers in a local restaurant saying NASA satellites were involved. Others pointed to storm clouds, cell phones, solar flares, the Taliban.

Drake said he's not so sure. "Everybody thinks it's the government," he said with a sly grin. "I think it's aliens."

Tony Rose, Charles County's chief of emergency communications, has heard about the problem but would hazard only a vague guess. "It may be something new in Waldorf, some kind of wireless technology," he said. "But I can't confirm it."

Keyless entry remotes have become standard in new cars in recent years. Of the more than 14 million cars and light trucks produced in the United States last year, 77 percent came with the remotes, up from 32 percent in 1996, according to industry research company WardsAuto.com.

The technology is similar to that used in garage door openers and remote-controlled toys. The remote acts as the transmitter, sending an encrypted message on a weak radio signal to the receiver in the car, which decodes the message and activates door locks and other functions.

But unlike other more powerful radio signals, keyless entry remotes are not licensed by the Federal Communications Commission. They are allowed to operate on frequencies used by licensed customers as long as their signals are sufficiently weak and don't interfere with others. But because of this outlaw status, their own signals can be jeopardized.

"Car entry systems, they have no rights at all," said Bruce Romano, who works in the office of engineering and technology at the FCC. "If they get interference, that's too bad for them."

Interference can occur when a stronger signal on the same or similar frequency overwhelms the receiver, and the low-powered message from the remote cannot be "heard." An engineer compared the situation to trying to have a conversation at a stock car race, where the roar of the vehicles will drown out the voices.

"In all likelihood, the disturbance is probably some fairly high-intensity signal that is only radiating at certain times, and therefore, it makes it very difficult to locate where the source of the problem is, because it's not always up," said John Daher, a research engineer who studies electromagnetic effects on electronic systems at the Georgia Tech Research Institute in Atlanta.

Some of the devices that have failed in Waldorf operate on a frequency of 315 megahertz. Another common keyless entry frequency is 302 MHz. Both of these frequencies fall within a range licensed primarily for use by the military and the federal government.

In a summary of radio spectrum use from the National Telecommunications and Information Administration, the frequencies in the range from 225

MHz to 328.6 MHz "are heavily used worldwide for critical military air traffic control and tactical training communications." Specific functions include "air-ground-air communications for combat weapons training carried out at and in the vicinity of all major air bases and military training areas worldwide."

"High-powered transmissions in this spectrum from presidential and military aircraft are thought to be responsible for interference," said Mike Swanston, a spokesman for the Consumer Electronics Association. "But the government doesn't have to say what they're doing or how often."

Military radio signals have been implicated in other frequency mishaps in recent years. In Bremerton, the home of the Puget Sound Naval Shipyard, the first outage occurred about the time the USS Carl Vinson returned to port. Less than a month later, the second failure of keyless entry corresponded with the arrival of another aircraft carrier for maintenance, according to news reports. A subsequent FCC investigation could not prove the cause of the outages.

Manufacturers of keyless entry systems say they have been battling interference for years with little recourse. Engineers from electronics manufacturer Lear Corp., based in Southfield, Mich., have made several trips across the country to sites where disturbances have been reported. In the past several years, said Tom Tang, an engineering manager at Lear, manufacturers have improved the keyless entry technology by narrowing the range of signals that can reach the receiver, in effect closing the door on unwanted interference. But an identical or very powerful signal still can foul up the keyless entry.

"These devices by their nature, and because of FCC rules, have to accept harmful interference," said John Dicroce, a product development manager at Audiovox Electronics Corp. in Hauppauge, N.Y. "We can't control any FCC approved devices."

About 15 miles north of Waldorf is Andrews Air Force Base in Prince George's County. Officials there said they have not heard about the disturbances, nor do they have an explanation for them.

However, in Waldorf, along Old Washington Road, a 300-foot-tall AT&T tower built in 1955 has several microwave dishes and a blinking white light affixed to it. The primary function of the tower, known as a "point of presence," is to coordinate local and long distance telephone service, as well as cell phone service. But on certain days, said operations manager Philip Clark, the tower also sends out a different signal.

Clark would not specify the purpose of the signal or when it is used. Another employee, who spoke on condition of anonymity, said the signal was related to "government" work.

"I've had problems with [my keyless entry] also," Clark said. The disturbance "is probably coming from our transmitter."

Clark, who works with AT&T Government Solutions, stood outside what appeared to be a windowless concrete building in front of the tower. The glass front door of the building opened into a small entryway, which led to a second white door. On the wall of the entryway was a circular convex mirror. Hanging next to it was a surveillance camera.

"We don't have a schedule when we use that signal; it occurs when necessary," Clark said. "I think it will go on . . . but we can see about not using that frequency."

A security keypad hung to the left of the white door. As Clark spoke, he smiled. "I didn't realize it was disturbing other folks," he said.

158.730 KEV491 is DPS Executive Security for the Governor's detail.

I know DPS is licensed for a TON of SPLIT or Narrow band frequencies like 158.7375. I do not know them to be in use officially.. I think I was hearing something on 158.2175 or something like that but it was regarding vehicle maintenance.

Isn't Laredo PD digital? Maybe it's just so they have compatible radios?

Anyone have any good freqs for west Texas, the Big Bend Nat'l Park
area? I have a list, but always willing to take more. :-)

2422. RE: [CenTexComm] Using the .ssd file with the Uniden BC296D for Hays co

Yahoo group: CenTexComm
Date: 2004-07-10 13:00:11 UTC
From: Mark Summers
Topic: 2414 Message: 2422

As usual, many thanks for responding. A couple more questions if I may.

1) Looking at radioreference.com, for instance the LCRA system, I assume if I decide the Creedmoor tower has better reception than the San Marcos tower, I should replace the frequencies instead of adding them. In other words, does all radio traffic go out on all LCRA towers?

2) When listening to the Austin digital stuff (Bank 1 in the ssd file), the radio picks up a transmission, but most always the signal is too weak to convert to digital. At a recent CenTexComm meeting in North Austin, the two guys showing me their 296D radios had "special" 800MHz antennas, which geometrically looked the same as the one supplied with the radio, but they said the reception is much better. Would going to a "better" antenna help solve my reception problem in Buda and if so, any ideas on which one(s) would be best?

3) Again regarding the Austin Digital system, I see a Creedmoor tower on the map at radioreference.com, but tagged as a "future" tower (if I am reading the low-res map correctly). Any word on a time frame for this tower, which might also solve my problems mentioned in 2) above.

4) Related to question 1) above, I see in Bank 1 that you have both Simulcast 1 and Simulcast 2 sets of frequencies listed. Please explain if/why both would be needed if all the radio traffic goes out on all frequency sets.

Mark (aka, Buda-flash)

2423. Using the .ssd file with the Uniden BC296D for Hays co

Yahoo group: CenTexComm
Date: 2004-07-10 15:11:05 UTC
From: Robert
Topic: 2414 Message: 2423

As for monitoring the LCRA towers.. you should search your scanner from 935-940 and make note of the strongest buzzing/control channels.. look at the LCRA list of tower sites and determine what tower you are hearing best. You can only put in one tower per bank so yes, you would take the .ssd fire and REPLACE the frequencies in that file with the ones from the tower you want to hear. You do NOT want to have more than one tower per bank, so once you have entered the frequencies for that tower on that bank, put the rest as 0 frequency and lock them out or else you can put in regular VHF and UHF stuff. You can put one tower in own bank and another tower in another bank, and then you can scan/search both banks. Only if a radio that is on that talkgroup happens to be in range of that tower, will you hear that talkgroup on that tower. For instance, New Braunfels is on the LCRA system but you probably will not hear them on the Austin towers because no radio is tuned to any of the New Braunfels talkgroups. So if you live in Hays Co, then I would concentrate on monitoring the Creedmoor tower, the San Marcos Tower and Possibly the Comal Co tower, depending on how far south in Hays Co you are. The Creedmoor tower is in the range of the Main LCRA headquarters so It tends to have the most active traffic on it, since they scan and monitor a lot of other agencies from there.

Radio Shack makes a very good handheld antenna that I do recommend when monitoring anything on 800 or 900Mhz. It is Catalog #: 20-283 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

When monitoring the Austin System, there are 2 main sets of towers.. You need to monitor them both. The simulcast 1 towers are mainly within the city limits and the simulcast 2 towers are mainly out in the county. But you will never know what tower is closet to you so you need to monitor both, again each tower on a different bank.
Don't worry about the Creedmoor saying future.. just put in both Simulcast systems.
I have no idea what towers are and are not active. If you have not mastered this system, stay away from the IR (Intellirepeater) sites. These are only remote sites that will only handle traffic for radios that go way out into this area.. they are designed to cover deadspots that the big simulcast towers may not receive but traffic on the IR's is hit and miss and there for one conversation and gone the next.

From: jfstx
Topic: 2424 Message: 2424

I 've listened to scanners for years....just got the bct8 because blanco County now has several channels that I couldn't get from my old (very old) scanner. I was wondering if anyone had frequencies....including trunk tracking info for the blanco county area?? I'm new to trunk tracking and am still trying to figure it all out. Any and all help would be great..thanks
James

2425. Radio Shack has a coupon again for the Pro-96 Scanner. $75 off

Yahoo group: CenTexComm
Date: 2004-07-10 15:49:16 UTC
From: Robert
Topic: 2425 Message: 2425

http://www.radioshack.com/Coupons/Coupons.asp?hp=coupons Save $75
Digital Trunking Handheld Scanner
With Coupon $424.99
Reg Price $499.99
Cat. #: 20-526 This is the Pro -96 scanner that will monitor the Austin System.
Coupon Redeemable: 7/11/2004 - 7/18/2004

I am not sure if they will let you but Radio Shack has a new MasterCard.. depending on what promotion they are running you may be able to apply for and use this card to pay for this scanner and doing so may give you an even greater discount.. Possibly even as much as 10% ($43) off.

The Radio Shack Pro-96 doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&site=search) or software (http://www.starrsoft.com/software/win96/default.asp) but at least it does use regular batteries and not a battery pack. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

The Radio Shack Pro-96 also has a necessary software upgrade that will have to be done if it is not already loaded onto the scanner. It can be found at:

2426. Monitoring Blanco Co

Yahoo group: CenTexComm
Date: 2004-07-10 16:18:55 UTC
From: Robert
Topic: 2426 Message: 2426

For Blanco county you go to www.radioreference.com
and you click on RR data base
then click on the State of Texas
then click on Blanco Co. which should take you to this link:
http://www.radioreference.com/modules.php?name=RR&ctid=2538

The only "trunk-tracking" going on in Blanco is the LCRA system and there is a link on that page to get to that system. They have a N Blanco and a S Blanco tower but neither of them serve any of the public safety in Blanco. It's mainly just for the LCRA Rangers and CARTS (Capitol Area Rual Transit). You may be able to hear some Hays Co talkgroups if they are hitting the towers you are scanning.

2429. Bryan/College Station scanner meeting reminder

Yahoo group: CenTexComm
Date: 2004-07-13 05:24:38 UTC
From: Sly & Debbie
Topic: 2429 Message: 2429

Scanner meeting will be this Thurs from 7:00pm until 9:00pm (or there about) at the Fuddruckers on Harvey Rd (Hwy 30) in College Station. I figured a place that didn't require "to be seated" would be better so folks can come at any time and wouldn't have to worry about a head count. Just look for the guys with the radios on the tables!
PS- You do not have to eat or pay to get in, so stop on by if you just want to chat or check it out. You are responsible for your own tab though.

Thanks-
sly n5gqb

I'll be monitoring the 146.820 w5ac repeater for those interested

2430. RS Pro-96 $75 +10% off

Yahoo group: CenTexComm
Date: 2004-07-13 20:34:14 UTC
From: Alex del Solar
Topic: 2430 Message: 2430

Greetings,

New to CenTexComm, but just wanted to post a good deal where I got my Pro-96 scanner.

Radio Shack on Parmer/MoPac currently has stock in hand an was very helpful setting me up (ask for Corey-- very knowledgeable, helpful.)

There's currently a $75 printable coupon on the Radio Shack website (good through the 19th, I believe.) also, if you apply for the RS Mastercard (1yr no interest), you can get an additional 10% off in a current promo, bringing the total for my radio down to $382.

Look forward to getting acquainted with scanning and sharing in the discourse...

-alex

2431. Repost #1 from RadioReference.com

From: lindsay@lcblanton.com
Topic: 2431 Message: 2431

http://www.radioreference.com/modules.php?name=Forums&file=viewtopic&t=11961

Band opening this morning was spectacular.

In any case, I logged the following P25 9600 baud control channel this morning:

867.0500 SYS:13E T0108

A quick license check reveals that this is an Austin/Travis County P25 site all the way out in Fayette County. No traffic was heard at all on the site:

866.7875
867.0500d
867.4750
867.9750

http://www.radioreference.com/modules.php?name=RR&action=fcc&cs=WPZW901&z=0.2&zc=1.05

Is Austin / Travis County expanding their communications network out East?

Notice that the sysid is different than the primary network 13F.

Anyone have any information?

2434. 296D Error Message

Yahoo group: CenTexComm
Date: 2004-07-15 10:53:39 UTC
From: Mark Summers
Topic: 2431 Message: 2434

I began receiving an intermittent "DIGITAL CARD ERROR PLEASE CHECK" message on my new Uniden BC 296D scanner. Any ideas on what might be the problem?

2435. Re: [CenTexComm] 296D Error Message happens all the time.. no big deal.

Yahoo group: CenTexComm
Date: 2004-07-15 11:32:47 UTC
From: Robert
Topic: 2435 Message: 2435

My BC296D gets the digital card error message about 3-4 times a week.. just turn the radio off and back on again and you will be good to go. If you have lots of problems then you can open up the battery door.. take out the batteries take out the card and put it back in.. it just means that somehow the card is getting a not so good connection but I think it's more of just a flaw with this radio.

Earlier this week I went to Schlitterbahn and programmed my BC296D with LCRA Creedmoor, San Marcos, and the Comal Co towers. All those towers worked fine. If anyone is still having trouble getting their BC296D, I can post the file in the files section. I already have one there for all the Austin towers.

That answers that question.

Can someone with a Pro-96 verify the system ID being broadcast for the CQPSK simulcast sites.... I thought last time I checked it was broadcasting 13E, however I'm seeing a few IR sites broadcasting 13F.

Also, I'd like to get the site frequencies updated for each of the IR sites for the system on radioreference.com. I believe we are getting close... ;-)

I wonder if it might be something as simple as the use of FRS (Family Radio Service unlicensed) low power radios? Here in FTW, the Gang Unit will use these sometimes when working in close proximity to each other. Of course, the gangbangers are doing the same thing, but that□s a whole other story! There seems to be a million and one users of these FRS radios nowadays. They□re cheap, easy to operate, and no license is required. They just don□t get out more than a few miles usually.

Is anyone hearing DPS using digital? Seems like everything west of
Junction is digital. It sounds cleaner than the Austin/TC TRS.

--
John Mayson jmayson@...
Austin, Texas, USA

Hi John & List,

Over the last few months, and from my W. Ft. Worth location, I've heard P-25 communications on the DPS splinter frequency 155.4625 (I believe this is the freq., it's the offset freq. from 155.475). A few other DFW area listeners have heard the same thing. Unfortunately, the PRO-96 I'm using has terrible sensitivity and I haven't heard the signal on it yet. I've always heard it over my ICOM or Uniden radios and they aren't digital capable. For all I know, I may be picking up some open band signals from West or Central Texas? But I doubt it. DPS in Wise & Parker Counties has used this "USA" Ch. for a while.

I have a bank programmed with the new DPS digital freqs., but until they stop using the analog freqs. or something else changes, I cannot really monitor the splinter freqs. effectively due to the analog freqs. bleeding over.

Good Question....I do know that the new DPS officer out here is the one that got the channel going...he also maintains the radiios and programs them for the local police/county cops. They call it channel nine and channel five. My dad is good friends with the sheriff and he won't even tell my dad. REALLY frustrating.

2443. Morning VHF ...

Yahoo group: CenTexComm
Date: 2004-07-18 14:54:08 UTC
From: Brian Scott
Topic: 2443 Message: 2443

There seems to fair (not excellent, but good) morning VHF DX reception in the N. Texas area (D/FW). I□m hearing Hunt Co. Fire Assn. (154.0925/DPL 143), Bridgeport PD (158.8425/131.8 PL) and other distant stations. I□m also heard Lufkin DPS on 154.665. It may be worth searching the various bands this morning?

I□ve been wondering for a long time who the user of 155.940 with a 127.3 PL might be? Any ideas or possible user south of FTW? Thanks

Brian Scott
Ft. Worth, TX

2444. Does anyone have a database file for the Pro96? Please post it.

Yahoo group: CenTexComm
Date: 2004-07-18 23:34:31 UTC
From: Robert
Topic: 2444 Message: 2444

I have had several people that have contacted me asking for an updated data file that will go with the Radio Shack Pro-96 software. I had this scanner when it first came out and the www.starrsoft.com allows for about a 15 day free trial. I never paid for the software so when I was using the free trial, I posted my the data file at the time, which is in the files section at: http://groups.yahoo.com/group/CenTexComm/files/

But since that file was uploaded, there have been many more talkgroups added and they added some frequencies to the Simulcast 2 site. Please, if you have an updated file, post it to the above section so you can help others get going. I am amazed at how many people out there have the new scanners and are trying to hear the system.

I just updated that data base for the BC296D if you want to see how I have mine programmed. I did one that mainly is for Austin and the Intellirepeaters including the LCRA N Austin tower (for Cap Metro, etc) and then I did another that has the 2 main Austin towers and then has more Focus on Hays Co which is more of the LCRA sites: N Austin, Creedmoor, San Marcos and Comal Co. Both of those are in the files section

---

Radio Shack carries the Pro-96 (handheld) @ www.radioshack.com and search for the Pro-96 which essentially does the same thing as the Uniden handheld. Both have good and bad features. The Uniden has a total of 1000 channels that you can scan at one time, and it's price includes a battery pack that you pretty much have to deal with, the A/C adapter and limited programming software and a cable. The Radio Shack Pro-96 sells for $499.95 and that price doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&site=search)

or software (http://www.starrsoft.com/software/win96/default.asp) but at least it does use regular batteries and not a battery pack. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283
(http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

The Radio Shack Pro-96 also has a necessary software upgrade that will have to be done if it is not already loaded onto the scanner. It has to be done to be able to monitor the Simulcast sites and if you are not sure if it's been done, then just do it anyway since it will not hurt it. It can be found at:

http://www.radioshack.com/images/ProductCatalog/Manuals/2000526_DL_instructions.pdf

Yesterday, on 159.210 New Braunfels, I heard a DPS unit tell another to go to 'Digital 2'.

----- Original Message -----
From: Mayson, John

I was listening to 155.595 MHz, the Comal County SO, when the dispatcher asked DPS to respond to a particular incident. Two or three units responded and one of the DPS troopers said, "DPS units go to digital".

I have recently heard Comal County SO units switching to 'Channel 9'. Sounds like it is a simplex frequency as the request is often made as, "are you close enough for Channel Nine?". They still use and refer to 154.950 as "Channel Three".

Any ideas?

Recently visited Canyon Lake and found 'Coast Guard Aux Canyon Lake' on patrol and monitoring 156.800 (Ch 16) for "anyone who needs assistance".

The Army Corps of Engineers repeater is active on 165.7125 with park related comms.

'Canyon Lake North EMS' up on 154.295.

A couple of small aircraft were working air to air on 122.750.

Hi John & List,

I'm wondering if someone might be able to answer a question that John's e-mail reminded me of? For years and years, I had gone to New Braunfels on Memorial Day. Even though I don't have that luxury anymore, I did this for about 10 - 12 years. I always heard Comal Co. SO using 159.15 to dispatch on. It seems it was a simulcast transmission with 1550.595 or 156.0 (Ch. 2). However, they've never been listed with this frequency. It is not an input frequency, I know the signal was not an image, and it could be heard all over the area (dispatch anyhow . I believe) on any radio I programmed it into.

I passed through Comal Co. en route to San Antonio in February 2004 and didn't hear this freq. (159.15) used. But I was under the impression that Comal Co. had joined up on the LCRA trunk system. I guess that isn't true?

My questions are (1) does anyone know the story on the Comal Co. use of 159.15 and (2) is Comal Co. on any trunk radio system? Thanks for any information .

2452. APD ANNOUNCES TRAFFIC ENFORCEMENT LOCATIONS

Yahoo group: CenTexComm
Date: 2004-07-19 21:52:58 UTC
From: Robert
Topic: 2443 Message: 2452

http://www.ci.austin.tx.us/police/release17_0704.htm

APD ANNOUNCES TRAFFIC ENFORCEMENT LOCATIONS
Traffic safety is a major focus of the Austin Police Department and a substantial amount of resources is committed to traffic safety improvements and traffic enforcement. Traffic enforcement is a primary function of APD motor units and one of the main functions of patrol officers. In addition, APD schedules officers each week on overtime, funded by grants, to enforce traffic laws.

The goal of traffic enforcement is to increase citizen's voluntary compliance with traffic laws. In furtherance of this goal, APD will now publish a weekly list of traffic enforcement locations. Although this list will not be comprehensive or specific as to exact location and time, it is being distributed to increase motorist's awareness of our enforcement activities. It is believed this increased awareness will lead to safer roadways through increased compliance with traffic laws. This week's traffic enforcement will include the following locations:

Monday, July 19th
3:00 p.m. to 11:00 p.m.--- 3200-4600 block of East MLK, Jr. Boulevard

Tuesday, July 20th
Morning--- Martin Luther King Jr., Boulevard at the west frontage of I-35
Morning--- William Cannon
Morning--- North Mopac from Town Lake to Far West Boulevard
3:00 p.m. to 11:00 p.m.--- 800-3800 block of Ed Bluestein Boulevard

Wednesday, July 21st
Morning--- 1800 block of North I-35
Morning--- 3700 block of East 12th Street
11:00 a.m. to 1:00 p.m.--- I-35 South on the east frontage at Woodward Street
Morning--- I-35 North
Morning--- Manchaca Road, south of Davis Lane

Thursday, July 22nd
11:00 a.m. to 1:00 p.m.--- I-35 South on the east frontage at Woodward Street
Morning--- North I-35
Morning--- West Ben White Boulevard
Afternoon--- Slaughter Lane

Friday, July 23rd
3:00 p.m. to 11:00 p.m.--- 1000 block of East 7th Street
9:00 a.m. to Noon--- 1400-1700 block of West Anderson Lane
Morning--- 2300 Rosewood

Afternoon South Mopac

Taken directly from radioreference.com This is Channel "9" It is mainly used at nights and on weekends, when the County road crews aren't out. At least this is what I've heard them on several times refering it as "9"

Aaron, KD5MBP

It's been a few years since I've heard this, but I've also heard Comal Co. SO calling 155.88 "Ch. 6". It's probably been at least 4 or 5 years since I 've heard this last, and I'm sure there are those who live around and monitor Comal Co. (i.e. Aaron) a whole lot more than I do :-). I'm not sure if "Ch. 6" was being used as a repeater, or to tell you the truth, if it may have even been the Roads people calling it Ch. 6? I just know I've definitely heard the SO use the frequency, and in past years, I've also heard it called Ch. 6.

Thanks Lindsay. I'm currently waiting for my password to arrive via e-mail on the commscan2 account. I haven't been able to look up the Radio Reference information just yet, but I probably will once I send this message.

The whole reason I used to have the 159.15 frequency in my radio (especially on trips through Texas) was because of its remote site use by DPS. I didn't realize this was designated as a fixed link frequency. I bet that it was/is used a lot more often (if not continually) during the high volume, holiday parts of the year too. Thanks again for passing along this information. I'm going to try to check out the RR/FCC information now .

Memorial Day. Even though I don't have that luxury anymore, I
did this for
about 10 - 12 years. I always heard Comal Co. SO using 159.15
to dispatch
on. It seems it was a simulcast transmission with 1550.595 or
156.0 (Ch.
2). However, they've never been listed with this frequency. It
is not an
input frequency, I know the signal was not an image, and it
could be heard
all over the area (dispatch anyhow . I believe) on any radio I
programmed it
into.

I passed through Comal Co. en route to San Antonio in February
2004 and didn
't hear this freq. (159.15) used. But I was under the
impression that Comal
Co. had joined up on the LCRA trunk system. I guess that isn't
true?

My questions are (1) does anyone know the story on the Comal Co.
use of
159.15 and (2) is Comal Co. on any trunk radio system? Thanks
for any
information .

Brian Scott

2459. APD gets new equipment to nab traffic violators

Yahoo group: CenTexComm
Date: 2004-07-22 21:34:37 UTC
From: Robert
Topic: 2459 Message: 2459

APD gets new equipment to nab traffic violators

03:40 PM CDT on Thursday, July 22, 2004

KVUE News

The Austin Police Department will use new equipment to start cracking down on traffic violators.

It's all part of an effort to lower fatalities. So far this year, 38 people have died.

During a news conference Thursday morning, Police Chief Stan Knee announced what he called project accountability.

It involves more patrols by air, adding more officers to traffic details and the use of two different type of vehicles to catch violators.

Low profile police cruisers will work the major roadways. Officers in used cars, provide by Henna Chevrolet, will help patrol neighborhoods.

Chief Knee says the campaign will still need help if it is to work.

"I am here today to plea for every Austinite to stop drinking and driving, to slow down and obey all traffic laws," says Chief Knee.

He made a promise to those who ignore his request, saying they will go to jail.

Capital Metro donated a special vehicle for the campaign. The mobile breathalyzer van will be used to process drunk divers faster, allowing officers to spend more time on patrol.

2460. APD Checking On Drivers From Above w/video

Yahoo group: CenTexComm
Date: 2004-07-23 13:05:25 UTC
From: Robert
Topic: 2460 Message: 2460

Check out the video clip: http://207.207.6.50/rmfiles04/apd_sky.ram

APD Checking On Drivers From Above

News 36 Video

Here is the story:
. APD Eye In The Sky <http://207.207.6.50/rmfiles04/apd_sky.ram>

Austin Police have a new arsenal of tools they're taking to the streets aimed at catching drunk and reckless drivers.

Part of this plan involves the Austin Police helicopter flying above the city. The chopper will spend evenings and nights in the air, actively looking for aggressive drivers.

If they catch you, there will be consequences.

"When we see somebody driving aggressively or recklessly, we call it in to our units on the ground," Bill Horn with Austin Police Department said.

Police have several new surprises for drivers, they'll soon be seeing on the ground.

APD Chief Stan Knee unveiled APD's stealth car designed to blend in with traffic to catch drunk or reckless drivers unaware that they're being watched.

APD will also use a breath alcohol testing unit dubbed the Bat Mobile to administer breath testing and to process DWI violators into jail faster.

Operation Accountability is being done to cut down on highway fatalities. So far this year, there have been 38.

"Over half of the recent deaths have involved alcohol, so it is a shared responsibility, a choice to not drink and drive," Austin City Manager Toby Futrell said.

Police say you will start seeing all of these new tools on road starting Thursday, and they'll target everything from street racing to drunk driving.

2461. The Pro-96 now has another upgrade that requires it be mailed to Fort Worth

Yahoo group: CenTexComm
Date: 2004-07-24 15:14:30 UTC
From: Robert
Topic: 2461 Message: 2461

http://www.radioreference.com/modules.php?name=Forums&file=viewtopic&t=12029&postdays=0&postorder=asc&start=30&sid=51e4384ee175717612bba01e17194bac

Regarding... questions from PRO-96 owners regarding the firmware 1.3 upgrade. It seems as though there is a lack of knowledge regarding this upgrade and is resulting in poor customer service with stores not accepting these top of the line ($500) scanners to be sent to the repair facility for the 1.3 firmware upgrade.

First there is a downloadable 1.2 firmware upgrade available at RadioShack.com under 200-0526.
http://www.radioshack.com/images/ProductCatalog/Manuals/2000526_DL_instructions.pdf
However there is also a 1.3 firmware upgrade that requires the scanner to be sent to the repair facility 40-0804 in Fort Worth Texas. This upgrade replaces the CPU inside the scanner and completes the upgrade to version 1.3 and includes the 1.2 upgrade.

The upgrade fixes some issues with the scanner and resolves the manufacturing defects that comes with the scanner as equipped with version 1.2 or less firmware. Any Pro-96 scanner that is out in with customers would still be under the one year warranty period as the scanner has not been sold for over one year.

The upgrade does:
V1.1 is the original version.
V1.2 fixes the TG lockout (above CH 4-08) bug.
V1.3 fixes the 48xxx TG reception problem.
Improves signals on CQPSK for the V1.3 fix.

Again the upgrade needs to be sent to the repair facility (40-0804) as an "In Warranty" repair with "Version 1.3 firmware upgrade" as the reason for repair. There are only 2 qualified technicians to handle this upgrade and they are only in Fort Worth Texas. Most store stock of the Pro-96 200-0526 scanners are version 1.2 or less and the stores may elect to send in their stock for the upgrade to "Think Customers First".

Please forward this information to the appropriate parties so that all Radio Shack stores receive this information as I have had calls from across the nation from different customers and store managers regarding this upgrade. Even Customer Care is seemingly unaware of this upgrade and customers are being told the wrong information creating a customer service issue. Also it appears as though International Customers, from Canada are being told that the stores in Canada will not help them regarding this upgrade and those customers are forced to ship their scanners to a US store for the repair or are electing to not upgrade their scanner and are using other brands of scanners to do the job our Pro-96 can do.

2462. Programming stuff

Yahoo group: CenTexComm
Date: 2004-07-25 02:25:18 UTC
From: Catherine Keller
Topic: 2462 Message: 2462

Sorry, guys....

I know you've probably been over this a bazillion and twelve times. I finally purchased a Pro-96 today and I'm VERY excited about it. I'm already hearing things that I wasn't picking up on my 2005 base scanner... although, I'm REALLY not totally sure what the heck I AM listening to right now on the 96!

What I expected to see was if it was a David Channel, a fire channel... I see that whatever I'm listening to is on Simulcast 1 ID# 01121

Okay.. I'm starting from the beginning to see what isn't toggled to an "ON" position or whatever! Thanks to trebor1159 for the Austin talkgroup file! I grabbed that and have loaded it on my scanner!

This is a lot more confusing than the scanners have been in the past! Yikes!! (But would it be this fun if it were less complicated? Maybe not...)

2463. most active talkgroups

Yahoo group: CenTexComm
Date: 2004-07-25 04:14:47 UTC
From: Robert
Topic: 2463 Message: 2463

As for DPS.. I am not aware of them being digtal anywhere for regular traffic.. Now if they happen to do traffic stops and use that county's radios that may be on a trunked system or digital or whatever then they may use those radios to talk to that agency on whatever that agency has but as far as DPS cars talking to DPS dispatchers.. the most popular set up is 155.460 base and 154.68 mobile.. in areas (like New Braunfels where it may be hard for the base to hear the mobiles that far away they will use a mobile repeater.. such as 159.210 in other areas it may be 155.445 base or repeater and if it's only then base then the mobiles will be on 154.695. 159.09 used to be a mobile relay channel to but now it seems to be mostly for CLE (Criminal Law Enforcement) related traffic along with 155.505.

These are the Austin/Travis Co talkgroups I would recommend labelling and are the most active/interesting The BC296D will only let you label 100 per bank. The Radio shack Pro96 lets you label 150 per bank.

From: Catherine Keller
Topic: 2462 Message: 2464

Hi John,

Familiar with trunking but not really successful at it! My older handheld is, I believe (it's at the office right now, so I can't look at it!), a pro-94 and with it I should have been able to follow LCRA's trunking. I never could really hear anything other than CARTS! However, since I could (and still can, I guess!) pick up APD/AFD/EMS conventionally I was okay with it!
So now I really have to pay attention and work my way through the trunking!

Today I'm going to work my way through Simulcast 1 and 2 on the radio reference site and see what happens. I guess I'm still somewhat confused about the talkgroup format, but one step at a time! LOL! Thanks so much for your help! I'll let y'all know how it's coming along!

-- cjk

-----Original Message-----

Are you familiar with trunking? It's completely different from conventional scanning. Rather than monitoring frequencies you're monitoring talkgroups. It sounds like you have it working. It just takes time to understand what it is you're doing.

We're here to help! :-)

Thanks. I was asking about San Antonio though. :-)

I have programming in the splinter frequencies to see if I hear
anything in metro Austin.

2466. Talkgroups that are *NOT* active

Yahoo group: CenTexComm
Date: 2004-07-25 14:21:50 UTC
From: Robert
Topic: 2466 Message: 2466

These are talkgroups that are not or not very active at all, so if you have limited room in your scanner to program a list you can probably avoid these for now.

From: Catherine Keller
Topic: 2466 Message: 2467

Sigh... now I know I'm in deeeeep trouble.

The radio that we have has already been programmed, I believe. It's from the Parmer Radio Shack (where the now-famous Cory works!). I don't see things listed on the display of the radio such as you have in this list below... I don't know that I'm supposed to see it like that though?

And, with the list below and the list of the talkgroups that are pretty active, how do I take the info you show below to use it?

I am so confused... but I'm sure that's pretty evident, eh? LOL!

Okay... I'm going to open up Win96 to see what I see there and see if ANY of this makes even a tiny lightbulb spark....

2471. RE: [CenTexComm] Simulcast 1 adds a new control channel

Yahoo group: CenTexComm
Date: 2004-07-28 14:59:37 UTC
From: Lindsay C. Blanton
Topic: 2470 Message: 2471

Does anyone know what the primary difference is between the Simulcast 1
and Simulcast 2 sites?

I know that Simulcast 2 focuses on Travis County operations, however I
believe that I hear APD and other talkgroups spread across both
Simulcast sites. Does anyone have any definitive information on how
talkgroups are allocated across both of those simulcast layers?

Thanks!

2472. RE: [CenTexComm] Simulcast 1 adds a new control channel

Yahoo group: CenTexComm
Date: 2004-07-28 23:33:29 UTC
From: Lindsay C. Blanton
Topic: 2470 Message: 2472

Well, the fact that they would spread the same talkgroups across two different simulcast sites is somewhat confusing to me. First, it doesn't (on the surface) show any regard to spectrum management, and second, it begs the question how the radios choose "which" simulcast layer to use.

So, I'm curious if these layers serve specific locations, like North or South? Or do they service central city and outlying areas? Only county services vs. only city services.

See where I'm going?

It is clear how the outlying intellirepeaters are utilized (gap-filler sites) - however there isn't any clear rule regarding how the simulcast layers are used.

Different frequencies. That's about all I can say. I don't seem to
be missing anything by monitoring only Simulcast 1. However, I have

now spread the system across three banks on my scanner and one
is
dedicated to county, so perhaps I'll make that one Simulcast 2
and see
if anything new (to me) pops up.

Yup and I agree with you. I spoke once with an APD detective and he said it would be two systems one for Austin the other for Travis County. It appears the same talkgroups show up on the same systems at the same time. I pick up Simulcast 1 all over the county (and well beyond). I guess I'll see how Simulcast 2 does as I have now have it programmed.

From: Lindsay C. Blanton
Topic: 2474 Message: 2475

My bet is it is the sheer number of subscriber units on the Austin/TC system that is so expensive. At 3-4K a pop, the cost adds up real quick.

The Illinois statewide system probably won't initially support nearly as many mobiles and portables.

Speaking of which... Monitoring Times mentioned the Illinois statewide
TRS that will cost LESS than the one covering just Travis County.
Really makes you wonder...

[Non-text portions of this message have been removed]

2476. Travis County ESD #9 is Westlake

Yahoo group: CenTexComm
Date: 2004-07-29 17:31:10 UTC
From: Robert
Topic: 2476 Message: 2476

TC ESD #9 is Westlake Fire. Westlake police are on 857.9375 so I'm sure fire would like to be on UHF too, hence they licensed 856.9375 and 860.9375 and perhaps they are going in and going to have 2 channels.. or one for EMS and one for Fire.. Westlake has made many changes to their radios.. they have the ca$h to do it. The police used to be on 155.115 (155.910 in) and then they reversed the pair making 155.910(155.115 in) perhaps because of adjacent tower interference.

The 155.910 as tack, I think,.. I have not heard them in awhile.

As for the city playing around with VHF I'm not sure where to look.. are there any new licenses out there? I don't have anything that will monitor 700 Mhz

Armstrong celebration set for Aug. 13
Party for six-time Tour de France champ will include fireworks, music and more

AMERICAN-STATESMAN STAFF
Monday, August 02, 2004

Organizers are planning a large celebration for downtown Austin on Aug. 13 to celebrate Lance Armstrong's historic sixth consecutive Tour de France victory.

Details are still sketchy, but the man in the yellow jersey is expected to attend, along with a slate of speakers and bands, city officials said Monday. Fireworks and a light show are also on tap.

In 2001, thousands of people jammed the shores of Town Lake for a celebration welcoming Armstrong from his third tour victory.

I had my scanner on showing it to somebody and heard "3 ALS patients
from the plane and the structure is on fire."

I wondered what had happened.

From: Robert
Topic: 2480 Message: 2484

you can follow the link from www.keye.com
you can try the story
http://www.news8austin.com/content/top_stories/default.asp?ArID=115360
depending on your browser the web address may chop up but you MUST put the
whole web address on one line .. in the above line it starts with
http://www. and it ends with the 115360 all of that must
be in the same line with no spaces. I tried to monitor radio traffic
using http://www.scancentex.com/ but I didn't hear much of anything.. I
don't know if they had Hudson Bend locked out or what. Also am I the only
one in town that cannot pick up the talkgroup ID for Firecom South. If
people know there is one and they are hearing stuff on it.. could you please
post the talkgroup ID. I also am not hearing it or seeing it on
http://www.scancentex.com/. Is there anyone at all with AFD that can toggle
through the talkgroups and tell us what each one is.

All of the HUdson Bend vhf frequencies were working
yesterday. I don't know if Austin FD went to help, but
I heard for fire and ems to go to "RED A". And Travis
Co. used TSCO EVENT 1.

2486. RE: [CenTexComm] Programming stuff

Yahoo group: CenTexComm
Date: 2004-08-08 23:06:05 UTC
From: Catherine Keller
Topic: 2462 Message: 2486

Hi John,

Sorry it's taken me so long to answer! I've got one of the Austin sites programmed for LCRA. Since I work for LCRA, too, I asked the radio guys (who have always been very tight lipped about this stuff) why I'm not picking up more... they suggested that I program in Dobie and Creedmore in addition to what I've already programmed in. I'll give that a shot!

I still have to work on Austin's stuff. Most of it looks to be programmed, I think I just need to dig deeper and where I hear conversation and there aren't any alpha tags, I'll have to figure those out and put tags on them! I hear calls being sent to "Blue" but I don't have any channels that are identified that way yet!

I generally hear more than CARTS. Do you know which LCRA repeater you have programmed? I usually just hear Hays County stuff, but some times Boerne will come in.

> Today I'm going to work my way through Simulcast 1 and 2 on the radio
> reference site and see what happens. I guess I'm still somewhat confused
> about the talkgroup format, but one step at a time! LOL! Thanks so much
> for your help! I'll let y'all know how it's coming along!

I just have simulcast 1 in my scanner and it works fine. The newest Motorola systems use sequential decimal numbers. Back before alpha tags I prefered the EDACS AFS format because I could remember 02-xxx was one agency, 03-xxx was another, etc. Now with alpha tags who cares, I no longer memorize talkgroups IDs.

2487. Mobile Scanner Antennas

Yahoo group: CenTexComm
Date: 2004-08-08 23:16:01 UTC
From: Catherine Keller
Topic: 2487 Message: 2487

Now that I have my scanner, I want to listen to it in the car. I would think the addition of a mobile antenna would improve reception...?

What would you guys recommend? I just came from a Radio Shack who said they don't sell any scanner antennas... I'm looking at their antenna model #20-011; it says it's for scanners...??

However, that may not be the best antenna for what I'm after, either! So any hints or tips you can send my way will be appreciated!

Thanks,

Hi Michael,

I went to the RS in South Austin off the frontage of I35 (right off Wm Cannon). I was pretty sure there was an antenna for scanners; this young man was only familiar with CB antennas and went on to state that they just don't make scanner antennas!

Thanks for the info on the window mount! That probably would have been the one I went for, so I'm glad you warned me about it!

2492. Simulcast 1 has another new control channel 866.4125

Yahoo group: CenTexComm
Date: 2004-08-11 03:31:44 UTC
From: Robert
Topic: 2492 Message: 2492

If you can't pick up anything from the Simulcast 1 towers, then it may be because you haven't added the latest control channel they are using tonight.

For the Simulcast 1 system, add:
866.4125 as a new control channel
and add 868.0875 into the list for Simulcast 1 frequencies.

I sent an update to www.radioreference.com
Ok come on .. can anyone else help me out on this stuff. Is anyone else in the city finding any new talkgroups or able to ID anything. Is there a Firecom South? I still can't find the talkgroup number. It does look like Capitol Metro as at least one tallkgroup on 3347.

From: Robert
Topic: 2495 Message: 2497

Durham supplies busses to many different school districts. I know Pflugerville uses Durham but the frequencies for the Pflugerville Durham busses will probably be on a different frequency than whatever is used in your area.

Speaking of that.. does anyone know what Pflugerville Durham busses are using.
I would search from 155.16 to 155.400 They are most commonly in this range ..
otherwise try 154.600 154.515 or if you are close enough to hear them inputting a UHF repeater, try 465-470.

Police rescue baby from death's clutches
Updated: 8/31/2004 9:15:30 PM
By: James Keith

Asia McCoy
Austin police received a welfare call Sunday night. A neighbor was worried about 6-month-old Asia McCoy and her father Willard. No one had seen them for days.

"They were getting worried and calling his cell phone, paging him, going over to the door and he would never answer until Saturday and Sunday they noticed a smell and flies," said Willard's neighbor Angela Sales.

The neighbors called police and asked them to check on the McCoys.

Inside, officers found the decomposing body of Willard McCoy. Baby Asia was on the floor covered in her father's remains and body fluids.

"I've been a police officer for nine years. I've seen a lot of death. She definitely appeared dead," Austin Police Department Officer Blain Eiben said.

Officers Eiben and Doug Drake rushed to revive the baby.

"I raised her up out of the floor, I was able to clean out her nose and mouth," Eiben said.

"We poured water on her, rubbed her back, talked to her and she started making noise," Drake said.

"I just remember the eyes being glazed over like she was dying and I just saw her leg moving a little bit," Sales said.

"It was unbelievable. It was surreal," Drake said.

Doctors say one more hour alone and Asia would have died.

"The thing I play over in my mind is as we lived our lives for those five days, we went to bed we got up went to work, there was a little girl laying on the ground in those conditions," Drake said

Asia's health is improving. Neighbors say they're grateful for those who saved her.

"The police, paramedics, they're heroes they went in there pulled the baby out and got the baby to the hospital," neighbor Clayton Baggerly said.

"The true hero in this is the baby. She was alone, cold, in the dark, hadn't eaten for five days she fought for her life for five days. We fought for 20 minutes, she's absolutely the true hero here," Eiben said.

While this story is about survival and heroics it also raises questions about whether little Asia had fallen through the cracks of a system meant to protect children. Asia was born in prison. Her mother remains behind bars and her father is now dead.

What should have happened after Asia's birth is still under investigation by police and social workers.

The cause of Willard McCoy's death is still under investigation by the Travis County Medical Examiner.

Pflugerville FD going live on Austin/Travis County 800mhz system... They will be using MedComm North for EMS Calls... And the Tac Blue talkgroups for Rescues/Pinin's etc... Thus far they are the first county 1st responder agency to transisition completely over to the new radio system.

I assume they will have a new "primary" talkgroup to communicate with AFD dispatch.

Adam Johnson, EMT-P
Communications Supervisor
Austin-Travis County EMS System

Hey Adam.. thanks for the update.. do we think they will continue to simulcast on the 154.145 repeater that they just purchased a few years ago..

I assume they will have some of their own talkgroups perhaps.. and yes.. it would be nice if they had the capacity to talk on all the Pflugerville's 800 talkgroups, along with AFD and APD and EMS.

Does anyone have a full listing of all the AFD talkgroups besides the obvious ones that we already know about.

In reply to: "Barely alive baby found next to decomposing body
From: "Robert" <trebor1159@...>"

Babies are truly amazing in their ability to withstand adversity. Do you remember those newborns who survived in the rubble of the hospital in Mexico for a week after the earthquake knocked it down?

I feel very badly for this child of adversity. She may never know a normal life. Perhaps she will get lucky and find a good family to take her in and show her the love that she needs as much as food and water. I hope for this.

This isn't about scanning. I am sorry for the OT reply. I felt moved to reply.

Glenn

2508. Farm to market Rd lookup

Yahoo group: CenTexComm
Date: 2004-09-06 03:11:37 UTC
From: Debbie & Sly
Topic: 2508 Message: 2508

Came across a neat url where you can look up where those Farm to Market roads are, that is where they start and end. Also there is a link at the bottom for other road types in TX (such as State Highway, etc)
This has came in quite handy when the band opens up and trying to figure out who is talking. Merely wait until someone mentions some road # and go look it up!
Sly

2510. Listening to 2448 - received a skip signal.

Yahoo group: CenTexComm
Date: 2004-09-08 03:39:51 UTC
From: Robert
Topic: 2510 Message: 2510

I heard some sort of surveillance today on talkgroup 2448 on the Austin/Travis Co TRS .. I assume it was something with Travis Co since that talkgroup was in that range of similar Travis Co talkgroups..

I locked on that talkgroup to see if I could identify them
and then all of a sudden some APD Frank unit bled over onto that talkroup talking about going out on traffic on Riverside. All the units on the 2448 talkgroup said what was that? they said it wasn't one of us.. it was some unit talking about a traffic stop on Riverside.. they all laughed and called it radio skip.

I called it a screwed up radio system. And their Dispatch computers are going down at least the same if not more than they did with the old UHF system. It seems like they are continuing to have major problems with their new toys.

2512. The Armed robbery and pursuit this morning

Yahoo group: CenTexComm
Date: 2004-09-08 17:03:51 UTC
From: Robert
Topic: 2512 Message: 2512

Ok here is what happened and it was most exciting:

First they bolo'd an armed robbery at the airport, and I was like do what?? They gave an address as something on the ABIA grounds, but not the business name then they finally said it was not at the airport but was on 290 near Oak Hill @ the Public Credit Union. How would they be open at 6:30am but somehow he robbed it and they handed him a RAT pack. Almost immediately they got a RAT signal going off and units were getting VERY STONG 6-8 lights along Ben White Blvd. Supposedly he took the victim's Chevy Tahoe so originally that's what they kept broadcasting as the suspect vehicle but it turned out he was in a Chevy Camero and APD finally got him (by seeing how the signal went from the RAT pack) in the Riverside area near Burton and Oltorf. He went all around Riverside and down to 183 South and all around there and they chased him all over. They launched STARflight, but STARflight should have been calling the pursuit. They couldn't even get on the radio because the cops were talking so much. Then DPS kept broadcasting it but I don't think they helped because they weren't keeping up (Does DPS not have a handheld to be able to hear or talk to APD.. come on .. If they refuse to be at the new dispatch center then at least get them a handheld so they can keep up) Alas they were unable to monitor the pursuit (hint for next time: simulcast any pursuits on Intercity 155.370). Then TCSO was working some accident at Colton Bluff and something and the suspect kept going by that collision scene. Finally TCSO was annoyed and threw out some spike strips but were not on the same talkgroup as APD so APD didn't' know what they were doing so the first car to get stung by the spikes was APD David 201 and he was most excellent with his pursuit up to that point. Then I think It was David 202 that took over and they finally spiked all the suspect's tires and got him stopped somewhere near that area of Colton Bluff. At first he wouldn't' come out of the car. But he finally did and gave up.

Ok I have said this before and I'll say it again. Everyone is on the same radio system so why can't APD and TCSO be on the same talkgroup for these pursuits. This was the first pursuit that I have heard on the RAT channel which probably threw a bunch of people off because usually only the RAT equipped units are monitoring that channel and I don't know if TCSO even has it at all but they still could have patched that talkgroup to a TCSO talkgroup and also patched it to Intercity for everyone else to hear had it gone into Caldwell Co.. it came close to going that direction.

2516. Traffic enforcement locations for the week

Yahoo group: CenTexComm
Date: 2004-09-13 20:05:38 UTC
From: Robert
Topic: 2516 Message: 2516

TRAFFIC

Traffic enforcement locations for the week

A news release by the Austin Police Department, September 13, 2004.

Monday, September 13, 2004

The Austin Police Department publishes a weekly list of locations where officers will focus on enforcing traffic regulations. Distributing the list is intended to help make drivers more aware of enforcement and thus increase compliance with traffic laws, the department says. This week's list includes these locations:

Monday, Sept. 13

Morning, 4000 block of Airport Boulevard

Morning, 1900 to 2300 blocks of Teakwood Drive

Morning, 3200 block of South 183

Morning, Walsh Tarlton Lane

Tuesday, Sept. 14

Morning, 5000 block of Bolm Road

Afternoon, Gracy Farms Lane from Metric Boulevard to MoPac Boulevard (Loop 1)

Morning, 7100 to 7600 blocks of East Ben White Boulevard

Morning, Barton Springs Road

Wednesday, Sept. 15

Morning, 1600 block of East 12th Street

Morning, North Lamar Boulevard between Braker and Parmer lanes

Morning, 3200 block of South U.S. 183

Morning, Texas 71 West

Thursday, Sept. 16

Morning, 800 block of North Interstate 35

Afternoon, West Rundberg Lane between North Lamar and Metric boulevards

Morning, 100 to 600 blocks of Slaughter Lane

Morning, West Gate Boulevard

Friday, Sept. 17

Morning, 2900 block of East 12th Street

Morning, Georgian Drive between Powell and Rundberg lanes

Morning, 7200 block of South First Street

Morning, South Lamar Boulevard

2519. The Trunked System being used at Austin City Limits fest

Yahoo group: CenTexComm
Date: 2004-09-18 05:47:18 UTC
From: Robert
Topic: 2519 Message: 2519

Ok if you have nothing to do this weekend then try to figure out this radio system so we can monitor it the right way. The system they are using for the Austin City Limits fest this year is (I think) a Johnson LTR system where it IS trunked but all conversations start off on a home frequency.. that frequency seems to be:
460.8625 It is non-stop traffic all weekend long. this is the primary freq and all talkgroups will be here until this freq is busy and then it will go to the next frequency.. I don't know what the correct order is but other active frequencies that appear to be part of this system are:

460.7375
464.4500
(other frequencies with the same license 464.300 busses but not related to the festival..461.150 464.725, 461.425, 460.7625, 460.8125, 460.8375)

Also heard activity on and it may be part of the above system.
463.7000
461.0875
461.2750
461.5750

Also active are 461.3125, 464.500 464.55, 469.5,469.55 461.3375461.3875
465.6875466.0875467.2125
Parks 1 453.325 Ground Crews that work for Parks Dept
Parks 2 453.575
Park Police used talkgroup 271 which is Park PD 1 on the Austin Trunked Radio System.

Hmmm maybe (atascosa). To all other inquiries I was mobile on hwy 21
headed east and the freq was the repeater output. It was late Sat night
-about 10pm. My location (IIRC) was between Bastrop and San Marcos (hwy
21) or east of Bastrop on 21. It never could get a solid lock on it as
it wasn't real strong but best I could tell it didn't sound like JDC stuff.

2525. RE: [CenTexComm] 155.1225

Yahoo group: CenTexComm
Date: 2004-09-22 17:37:37 UTC
From: Brian Scott
Topic: 2520 Message: 2525

Hi Sly,

Thanks for the advice. I've been listening to USSS, Ft. Worth NAS's 400 MHz digital system, and a new system used by the Federal Bureau of Prisons in the DFW area over the last year or so. Unfortunately, some of the other P25 users I'd like to hear cannot be received (yet) at my location. As fate would have it, I'm in a small hole on a hill. The hill helps, but the hole doesn't :). I've got a Yagi for the 400 MHz band and I'm trying to get one for the 800 MHz band to improve my reception. That, and I want to raise my mast about another 10 ft. if I can. This will hopefully help.

I've had some friends (mostly in law enforcement) who ran some tests on a P25 Astro radio using encryption. Strangely enough, we were able to determine that encrypted P25 communications sound about the same as receiving a weak P25 signal. The communications sounded choppy and like a signal that just isn't making it. So now, when I hear this type of signal from the Dallas USSS, I wonder if I'm just not getting a good signal or if they are encrypted at that time? Oh well, as long as I can hear them most of the time I'm happy.

Thanks again for passing on the information to me. I will talk to you later ...

2526. RE: [CenTexComm] 155.1225

Yahoo group: CenTexComm
Date: 2004-09-22 20:07:21 UTC
From: Lindsay C. Blanton
Topic: 2520 Message: 2526

A bit is set on an encrypted transmission that tells the receiving radio
to use a specific key to decode the transmission.

From: Mayson, John [mailto:jmayson@...]
Sent: Wednesday, September 22, 2004 1:11 PM
To: centexcomm@yahoogroups.com
Subject: Re: [CenTexComm] 155.1225

Maybe you can answer me this.

Some Austin PD talkgroups are encrypted. I'll hear one unit
that is
encrypted, but the other person is not. It appears the two are
in
fact having a conversation. How do they hear each other? I
know they
have to hit an encryption button on their radios. How would the
non-encrypted person hear the encrypted person?

Yea encrypted digital comms just sound like the words have been diced up
and shuffled. If you are using the Uniden digital scanners the display
will alternate "enc" and "p25" in the corner.
Are you familiar with dfwscan group on yahoo?

2529. There is only a small amount of encryption

Yahoo group: CenTexComm
Date: 2004-09-23 03:47:31 UTC
From: Robert
Topic: 2529 Message: 2529

There is only a small amount of encryption on a few of the talkgroups. Usually the 10xx such as 1021 etc.. Sometimes both sides are encrypted and sometimes it's just one side. These are the specialty divisions such as Homicide, Gang Units, etc. The Street Response guys on the 9xx do mainly drug and prostitution busts and are not encrypted.

2530. RE: OT: Humor

Yahoo group: CenTexComm
Date: 2004-09-24 15:59:21 UTC
From: Glenn Morris
Topic: 2530 Message: 2530

That was priceless John. Expect to see it on many boards in the near future.

You'd think the user with the missing key would get a busy tone while an
OTAR command zaps the radio with the correct info. At least that's how
it *could* work ... some day. Here's the really weird thing ...
obviously the guy talking in the clear is able to hear his encrypted
buddies so the radio is able to decrypt fine. That's goofy.

2532. AFD 1121 1122 1123

Yahoo group: CenTexComm
Date: 2004-09-26 16:58:41 UTC
From: Robert
Topic: 2532 Message: 2532

AFD is most commonly on 1121 which they keep calling Firecom North

but I know that some of the units keep appearing on 1122 and then yesterday, I saw 1123 keep popping up. Is there any possibility that they would have separate talkgorups for the volunteers.. I noticed that Pflugerville and Oak Hill do have 800 Mhz radios.. they are not necessarily on FireNet any longer.. they come up and respond on the 800 Mhz digital systems.

Still looking for ANYONE with an inside connection to AFD that can get us at least a list of the talkgroups.

Also This weekend is Pecan Street Festival. The cops down there working that were using APD Training 3 yesterday.. so just because a talkgroup is listed as "training" doesn't mean that's what they are using it for.

Most Motorola radios will announce an "in the clear tone" when
transmitting in the clear on a talkgroup strapped for encryption. It
has to be enabled in the radio however.

You'll definitly hear the in-the-clear tone on Fed freqs.

2535. Mobile Cellular Antennas spotted on streetlights

Yahoo group: CenTexComm
Date: 2004-09-30 21:01:07 UTC
From: w5cdt@yahoo.com
Topic: 2535 Message: 2535

I've noticed some Austin street lights now have a little
box with three mobile cellular antennas on them.
Two on the bottom and one on the top.
The box appears to get it's power from the little
photosensor socket on the top of the street light.

What kind of network is this? Does anyone know?

thanks in advance,

W5CDT

Out here in Buda we have "remote meter reading" wherein
Pedernales Electric can send a command down the power lines
and read our electric meter. So I guess Austin is using a wireless
version of the same idea.

From: Steve Bosshard (NU5D)
Topic: 2539 Message: 2540

Are you using a discone antenna? These usually cover from 50 to 1300 mhz. If there is a particular 800 or 900 system you are trying to listen to, you might consider a yagi to the exclusion of other bands and directions.

On a 50 ft run, a good quality RG8, or better yet, Times Microwave LMR 500 with type N connectors. Do not splice and avoid adaptors. A 10 db preamp might help but usually has a limited band width. I like the Advanced Receiver Research, GaAs Fet types. Remember to use proper grounding and seal connectors to avoid the ingress of moisture.

Also, if there are nearby high powered transmitters, the preamp might become overloaded and have intermodulation products due to compression from nearby high level signals.

For the average scanner listener I would use belden 9913 or Times Microwave lmr-400 or 500. You could get into using hardline or heliax cables which even better but the cost goes up quite a bit. Also use a antenna (directional) made for that band. What kind of antenna are you using?

2543. Fire - 154.250 - Pittsview?

Yahoo group: CenTexComm
Date: 2004-10-06 00:54:57 UTC
From: dayneshornsby
Topic: 2543 Message: 2543

From 1930-1945 local, 10/05, listening comms describing a large fire with 50+ ft flames.

I don't know where it is but names mentioned were Pittsview<?>, Shashonee, and Trot Line Rd. Comms have now switched to 'simplex' so no longer hearing them.

I am listening on the 156.180 repeater (154.250 input) in Bexar County. Normally these comms are from Hayes County.

Any ideas?

Thanks.

2545. Waco DPS & 155.460

Yahoo group: CenTexComm
Date: 2004-10-09 12:01:31 UTC
From: Brian Scott
Topic: 2545 Message: 2545

Hi Group,

I☐m hearing something I don☐t think I☐ve ever heard before from W. Ft. Worth this morning. I☐m hearing DPS Waco (KKC523) using 155.460 as a 2-way repeater with mobile units. In other words, I☐m hearing both the units going through the repeater, and of course, Waco☐s DPS☐ base going through the repeater. I cannot recall ever hearing 155.460 used like this.

I☐ve can usually hear Waco DPS without problems anyway (this morning is definitely better though). Is this something new (two way repeater comms.) DPS is using their normal ☐base☐ channel for?

Actually, I☐m hearing Lampasas DPS units and base also using the frequency the same way. The PL is the usual 162.2 it appears also.

I wonder if they may be doing this as they start programming the new digital channels that are appearing? I☐m not even sure why they☐d need to do this (or if they☐d need to), but it☐s still interesting

Brian Scott

Someone else may have some actual first hand knowledge of this but I believe most if not all the 155.460 and maybe 155.445 MHz remote base locations are set up for repeater operation, just that the dispatcher usually runs the system in half-duplex (non-repeater) mode. Perhaps when there is something going on like a pursuit where you need to coordinate with mobiles and also talk to the base. Then the dispatcher has to remember to switch back when they are done.

Hi Myles & List,

Thanks Myles. On my local area list (DFWScan), one person reported that they've noticed DPS doing this in the N. Texas area lately and another said the same thing has been going on in Ozona too.

I'm trying to remember if I heard this same thing done during the STS-107 space shuttle disaster? Now that you mention their possible use of this frequency in full duplex mode in certain situations, it seems to jar my memory and I believe they may have done this on that tragic day too.

Thanks again Myles ...

2548. Re: [CenTexComm] More changes on the FM dial

Yahoo group: CenTexComm
Date: 2004-10-16 03:22:26 UTC
From: Rev. Sean Farrell
Topic: 2548 Message: 2548

Yeah, I have noticed that as well. I suspect it is their way to compete with satellite radio by firing all the DJs, selling all the equipment, closing the building down, and getting someone a thousand miles away to control everything via a computer in their underwear. Oh, the feel of the self-proclaimed "live music capitol of the world".
I never listen to 94.7 so I wouldn't know different from typical. KGSR, 107.1 I think, still remains the same with their constant playlists.

If you want real news and current events, tune into 90.1 in south Austin and Round Rock, 100.1 in south Austin and Westlake and 96.3 in North Austin. When you're out in Bastrop, try 91.1; 93.3 and 95.3 when you are in San Antonio.

So here they are again.

90.1 for south Austin/Round Rock
91.1 for Bastrop (I guess this means the entire county)
93.3 & 95.3 for San Antonio
96.3 for north Austin
100.1 for Westlake Hills/Rollingwood/south Austin

Take care all,
Sean

From: Glenn Morris
Topic: 2550 Message: 2550

I have about given up on commercial FM radio. They either yak through the fist and last quarter of each song, have a 45 song playlist set to random play or play screaming "hair" bands that I refused to listen to when they were new. I miss the old "Classic Rock" stations that limited their play to 1960-1980 and real rock (Led Zep, Beatles, Clapton, etc...)

I have switched over to AM talk radio in protest. I usually listen to 1600 WOAI. It may not have a good beat and you can't dance to it but it isn't the SOS every day.

Off topic - is anyone interested in a 32 channel, 35 watt UHF Maxtrac mobile radio? I am about to put it on e-Bay but thought I'd give my two scanner lists first crack at it. I'm asking for $200.

Glenn

Topic: 2554 Message: 2554

You can not get gain on a broad band antenna. The only way you can achieve what you want without going to a directional is to get band specific antennas. You will need to feed them into a combiner then amplify the composite with a broadband amp.

Your only other alternative is to stick with your diskcone and get it up higher. But that is a poor second to band specific antennas for the most gain.

On a separate note: I have two Antenna Specialist low-band base loads for sale cheap. One is 30-36 MHz and the other 36-42 MHz. These use the standard CB spring and 36" whip and screw into the 3/4" mount that Radio Shack sells. (They look like the CB antenna Burt Reynolds used on his Firebird in the first Smokie and the Bandit movie.) I have one base mount and one whip assembly I will include. Does $25 for all sound reasonable?

Glenn

2558. Critical Air using new tone; new talkroups

Yahoo group: CenTexComm
Date: 2004-10-24 20:54:22 UTC
From: Robert
Topic: 2558 Message: 2558

Critical Air has changed their pl tone to 162.2 on their 460.825 repeater. Incidentally I can't find any record on an FCC license for them or this frequency anywhere in Austin or Travis County.

Last night Air 1 was being used to nail speeders and people racing on Mopac leaving the bars.. They were nailing people about 2am, usually going 80+MPH. 2 motorcycle drivers were arrested for racing. That was on License and Weight Talkgroup.

Today, Sunday they are doing a warrant round-up on the Law 1 -4 talkgroups. They are using DPS100 helicopter to help them and the helicopter does the talkgroups. Wow!

I've updated a few more talkgroups on the TRS.

1122 they directly called it Tac Firenet ???
1123 Firecom South.
1162 AFD Dispatching Pflugerville.

2560. Austin and Travis Co doing away with the patches to VHF and UHF

Yahoo group: CenTexComm
Date: 2004-10-28 20:28:13 UTC
From: Robert
Topic: 2560 Message: 2560

TO LOCAL NEWS MEDIA MANAGERS AND EDITORS:

"About a year ago, a number of local public safety agencies began moving from their previously-used radio channels to the Austin/Travis County 800 MHz Trunked Voice Regional Radio System (RRS). At the time, no radio scanner vendors had a product on the market that would properly decode and trunk-track radio conversations on the RRS. In an effort to temporarily provide local news media a method of continuing to monitor public safety agency radio traffic on the old UHF and VHF radio channels, radio "patches" were put in place that would enable certain radio talkgroups on the new system to be simulcasted over the old channels.

In December of last year, a national vendor announced the availability of a new scanner model that would properly decode and trunk-track conversations on the RRS. Since that time, it is believed that most local news media organizations have become aware of that fact, and have acquired one or more of these new scanners.

On September 8, 2004, I appeared before a meeting of the local news media and Austin P.D. representatives (Kevin Buchman-PIO, Chief Stan Knee, Asst. Chief Rick Coy, and others) at the APD Training Academy on Shaw Lane and announced the intention to soon disconnect most of the above-described radio "patches," and asked those present to convey that information back to their news managers and editors. As I stated, some of the old UHF radio channels need to be used for other purposes, and some need to be permanently vacated in keeping with an agreement previously made with the Region 49, Texas, Regional 800 MHz Frequency Review Committee.

It is our desire to eliminate certain of these radio "patches" on the morning of Tuesday, November 9 , 2004 , at about 8:00 a.m. The "patches" to be discontinued are those for Austin P.D. and most of those for the Austin Fire Department. The Austin Fire Department 800 MHz to VHF (153.950 MHz for County FIRENET purposes) will remain in place for an indefinite period of time to meet on-going AFD radio communication needs with Travis County firefighting agencies that have not converted to the new 800 MHz system, and still continue operate in the VHF band. The Austin - Travis County EMS patches from 800 MHz to UHF (462.975 MHz for responses within the Austin city limits) and from 800 MHz to VHF (155.715 MHz for Travis County responses outside the Austin city limits) will be left in place as Austin - Travis County EMS has an indefinite business need to do so. (Note that existing Travis County Sheriff's Office radio "patches" from 800 MHz to VHF will also continue in place for an indefinite period of time.)

We have purposely moved slowly in the stated conversion process to give local news organizations a reasonable amount of time to procure and deploy the new scanners for their news gathering purposes . Since we are now at

the one-year mark, however, we feel it is time to complete the conversion process.

Should any local news media representatives have any concerns as to the above time line, or have other desire to communicate with me on the subject, I welcome your call. My numbers are listed below.

2561. Austin Police Department Loses Officer

Yahoo group: CenTexComm
Date: 2004-10-31 13:40:46 UTC
From: Robert
Topic: 2561 Message: 2561

Austin Police Department Loses Officer

At approximately 10:48 p.m. on Saturday, October 30, 2004 Austin Police Department patrol officers observed a suspicious person walking in the 1300 block of Poquito Street. An officer exited the patrol unit as the suspect attempted to flee from the officers. Officer Adrian Valdovino who remained in the vehicle struck the pursuing officer as the officer continued the foot pursuit.

Officer Amy Donovan, an officer with the Austin Police Department since June 18, 2004 was transported to Brakenridge Hospital where she died as a result of injuries sustained in the collision. Officer Donovan was 37 years old and graduated with the 109th Cadet Class. Officer Donovan is survived by her husband and four children.

The Austin Police Department lost a member of its family and the entire Department mourns the tragic loss of this outstanding officer. The Austin Police Department extends its deepest sympathy to the Donovan family in their time of sorrow. Officer Donovan is the 19th officer to loose her life in the line of duty and is the first female officer to die in the line of duty.

Since this is a comms list, I'll give you my side of this story. I had Wes riding with me last night at MRPD. Being Wes, we were listening to lots of radio channels... <grin>.

Then we heard the Priority 1 Pin In go out as "Officer Involved." We heard the events on Tac Blue 9 (what a silly channel name... Tac Blue Nine?). We heard the CPR in progress, we heard the request to divert the second commander to Brack, we heard the CIT teams set up at APD. We knew.

It sucked.

Because they haven't released the picture yet, I'm not absolutely sure, but I think I knew Amy. I'm staring at the picture of Cadet Class 109 right now from TV, and it's relatively digitized and hard to see (and there are no names), but the officer I believe is Amy is the second one from the right kneeling on the first row. At least, that's the officer I've interacted with several times...

Honestly? I hope it's not her. Not that this becomes any better for everyone else involved, but in a small, selfish way it becomes better for me. Then again, that's probably avoidance.

I can't describe the lingering feeling of nausea since that call went out. I can't tell you how spooky it is to think that I myself was in a fleet accident the night before at 6th and Congress, and that (who I believe to be) Amy Donovan brought me a blood tube for my DWI driver at Brack, and we talked for about 10 minutes about "stuff." Whether or not it's the same Amy, the Amy I have interacted with has always worn a bright smile, obviously enjoying her chosen line of work, and has always represented APD as a professional organization.

Whether or not it's "my" Amy, I feel horribly awful for her partner. I don't even know where to start there... the guilt of killing your partner has to be heavy and I only hope it doesn't lead to another officer death in Austin.

I'll say this, though - hearing the events on the radio (and being a paramedic, too) assures me that everything that should have been done was done. Fire moved fast, EMS moved fast, and EMS had CPR ON SCENE but Amy survived to the hospital, survived the ER assessment at Brack and made it to surgery. For those of you that know ANYTHING about traumatic arrests, that's absolutely incredible and completely shatters the odds to get THAT far. As for survival rate, it's less than 1 in 10,000 for traumatic arrests when CPR is started.

It always seems weird to me that two fairly inexperienced cadets were paired together in one of the worst sectors in the city. (Charlie) You would think, if they have enough officers to double up, that they would team a new officer with a veteran officer. He backed into a pole, so I'm not sure how all that came about. (if he was just backing down the street to chase after the suspect or if he was trying to quickly get turned around, perhaps he lost control of the car) I can understand him trying to back up but he hit the pole, so something must have gone wrong.

I too was out and about in Round Rock getting my volunteer time in with RRPD. Things quieted down pretty quick on the radio when the word went out across the MDTs (I got notified another way since we don't get MDTs). It is a quick and hard reminder of a difficult profession.

2566. Final Radio Call for Amy Donovan

Yahoo group: CenTexComm
Date: 2004-11-04 14:01:29 UTC
From: Robert Barker
Topic: 2566 Message: 2566

Amy Donovan's Funeral is this morning at 10 am in Georgetown @ St. Helen's Catholic Church Listen around that time on "Crit 2" for her final radio call. Unfortunately, not everyone on the trunked system has this talkgroup.

Amy was the Charlie sector officer who was accidentally run over by her partner during a foot pursuit. Both had been on the force less than a year.

Rest in Peace Amy.

2568. DPS tonight simulcasting 155.46 onto 159.2175 digital

Yahoo group: CenTexComm
Date: 2004-11-10 06:06:09 UTC
From: Robert
Topic: 2568 Message: 2568

This is the first time that i have heard DPS on 155.46 simulcasting onto 159.2175 digital.. you know it's digital because a normal scanner is just getting buzzing on 159.2175 or anything close to that such as 159.215 or 159.225. But I'm hearing him just fine with my digital scanner.

Also the city of Austin sent out a page today telling everyone that Motorola is in the processing of adjusting the radio system and if a unit has trouble communicating, they should either turn the radio off and back on or tune to a different talk group and then back to the normal talk group which should correct the problem. Console work is scheduled for 12:05 AM Wednesday and again at 4:15AM. The interference shouldn't be more than 5 minutes per commander Piatt. We'll see about that. my friends who are familiar with other digital systems said this Austin/Travis Co system is not "in-sync" as far as the towers which is caught a phasing problem that sounds bad on the scanners and to them too.

We were originally told that all the UHF and VHF patches would be taken down (except for 462.975, 153.95, 155.715, 154.085 and 155.31) but none of that has happened.

2570. City of Bryan doing grid testing on new digital system

Yahoo group: CenTexComm
Date: 2004-11-11 06:21:02 UTC
From: Debbie & Sly
Topic: 2568 Message: 2570

For those interested City of Bryan has started "grid testing" their new digital system this week. For those not familiar with this its more/less going around the city/coverage area and doing rx/tx tests over the system while in each designated "grid" or building looking for dead or weak spots. They have 4 talkgroups set up for this 2 analog and 2 digital.. There are also a few talkgroups set up for training folks on the new system. So it won't be long now!!

The system is a 800mhz 3600baud mixed system. Police wil be digital, fire supposed to stay analog. City services are to move over to the system as well (analog?)
System id is A710
Right now pd and fd are on vhf. Various city workers on on a business ltr system.

There was a press release a week ago saying that the patches were no
longer needed following the availability of radios like the PRO-96 to
press and the public.

That would explain a *lot.* I still get a LOT of garbage out here in the boonies... coverage, insofar as a user of the system would expect, seems to SUCK for us.

Personally, I miss the analog radios. At least I could understand PARTS of transmissions I missed - now, I just get that "quacking" sound...

Mike :/

I prefer the BC296D myself. While both the Pro-96 and BC296D have their pluses and minuses, I'm finding a lot more I like (PC control, not just PC programming of scanner, for one thing) that I like with the BC296D.

I still am unsure how a person is able to manually go to a specific talkgroup with the Pro-96 unless someone is actually talking on that TG and a person presses the hold button. As long as you are in the bank you want to find the TG in, with the BC296D, all you have to do is press the Hold/Man button and enter the number for the scan list and channel. For instance, if I wanted to go to TG 3728 that I have programmed in scan list 4, channel (channel may be the wrong term here) 6, all I have to do is press Hold/Man, 4, 6, and Hold/Man again. Is there a way of doing this with the Pro-96?

One other plus for the BC296D is it trunks LTR systems and EDACS Narrowband systems too. The Pro-96 doesn't trunk those types of systems.

I'm definitely not knocking the Pro-96; I just like the BC296D better (oh yea, and it has 1000 channels too).

Either a Radio shack pro-96 or a Uniden 296d or a 796d (mobile/base,
first two are handhelds). Any unit will run you around $500+

Yea its possible, just a few more keystrokes on the pro-96. If they are talking, merely press "pause". If they are not then press func trunk, scroll to your desried id then press func trunk again.
I have both and personally I prefer the pro-96. Some of the features I like over the the 296 is; better digital sound quality and ease of use (esp programming) and instant pl/dpl decoding. Open/closed trunking by bank, not global on the 296 (either all trunk search/trunk scan).For conventional I like the silent squelch tail feature (turn off code detection) on the pro-96. But yea both scanners are great. Both have advantages/disadvantages over each other. I do use both radios but find myself packing around the pro96 more.
Sly
PS-I am not in Austin, both scanners will do the 9600 baud digital trunking, maybe someone in Austin can comment more directly about listening to APD with either radio.

Thanks for the information on how to manually get to a TG with the Pro-96. I have one of those radios and I'm reviewing the BC296D now for an article I'm writing for Scanning USA. I just wish I could find a way (short of paying $500+) to keep the BC296D. Thanks again for the help! I'll try it out when I get back to the Pro-96 at home.

2582. Scanner seen on "The incredibles"

Yahoo group: CenTexComm
Date: 2004-11-15 06:48:35 UTC
From: Debbie & Sly
Topic: 2582 Message: 2582

Took the kids to go see "The Incredibles" movie this weekend and they had a scanner in the movie! Yes this is an animated movie. The scanner looked like one of those old style crystal bearcats with the scrolling lights (like a bearcat one maybe?) The super heros used it in the car to listen to police calls to find out where the bad guys are. About 30 min into the show...
Sly.

Hmm ... what I saw had a digital display ... numbers in the 600 mhz range.

I was suprised at the semi-accurate "pilot speak" used later on in the
movie - very surprising for an animated flick.

(I used to own an old Regency 4 channel crystal model ... a very, very
looooong time ago.)

2585. DPS is just Testing the digital.. they have not switched

Yahoo group: CenTexComm
Date: 2004-11-17 14:34:57 UTC
From: Robert
Topic: 2585 Message: 2585

DPS is still just testing the digital stuff. This morning I heard the first digital signal on 154.680 (the mobiles)

The base is still analog in the clear on 155.460 and the mobiles (for the most part) are still analog in the clear on 154.680 but I have noticed some digital testing where the 155.460 was sometimes being simulcast on 159.2175. Now, today in the downtown area, I'm picking up digital around 154.680 (but I didn't have a digital radio with me, so I can't tell what they are saying.)

I'm curious about them using digital on the old analog freqs.
Could they be actually using the new narrowband freqs they are licensed for
that are close to the old freqs and you are just picking them up with a wide
bandwidth window on your radio?

The new freqs are 155.4675 and 154.6875.

I'll be heading to New Braunfels/Fredericksburg this weekend with my 296D so
maybe I can try to determine that as well.

myles

Topic: 2585 Message: 2587

Yes they are definitely using the new narrowband freqs when in digital.. but they are just testing.. like simulcasting.. this morning what I heard bleeding over onto 154.680, I am not sure what it was because I did not have my digital scanner at my desk.. But the base simulcast of 155.46 is on 159.2175, that transmitter being right there on IH-35 near Rundberg.

Capitol police 155.445 is also StiLL being simulcast on 158.97 at the same location.. I have no idea why.. all of that is still analog.

2588. Radio Shack Pro-96 on sale Thurs only for $349.99

Yahoo group: CenTexComm
Date: 2004-11-23 14:59:29 UTC
From: Robert
Topic: 2588 Message: 2588

To view the Radio Shack email in a browser, copy
http://recp.rm05.net/servlet/MailView?ms=MjM3MzIS1
<http://recp.rm05.net/servlet/MailView?ms=MjM3MzIS1&r=MTE2NjAzODc1S0&j=NjczN
zM2MAS2&fwdId=2506> &r=MTE2NjAzODc1S0&j=NjczNzM2MA\S2&fwdId=2506 into your
browser.

This is the Pro96 which is one of only 2 handhelds that will receive the
Austin/Travis Co TRS and this is the cheapest I have ever seen for one day
only online through www.radioshack.com on Thanksgiving Day only. It says
the price is after the mail in rebate.. I'm not sure but I guess you
actually have to pay the $499.99 and then you will later get a rebate
making the radio $350(349.99).

You still should get

1) a decent antenna for it.
<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&
product%5Fid=20%2D283> 800MHz Scanner Antenna Radio shack Catalog # 20-283
$15.49

2) 4 rechargeable batteries and the power adapter for the

3) home and 4) car,

5)the cable to program it ($23 w/shipping) http://www.pro96.com/

6) The computer program $30 @ http://www.starrsoft.com/software/win96/

Austin Police are no longer on 460 Mhz. They have gone completely digital.
The base version is supposed to be available in January, but it will not be
this cheap. Should be about the same regular price of $499.99 . The only
other handheld is the Uniden BC296D which sells for about $520 @
www.usascan.com <http://www.usascan.com/>

$349.99
after $150 RadioShack mail-in rebate

Digital Trunking Handheld Scanner
Communications buffs will love this handheld scanner with abundant memory
capacity, able to store frequencies in 5500 memory channels. Follows APCO 25
digital and virtually all analog MotorolaR and GE/Ericsson EDACS trunked
systems.
Reg. $499.99 #20-526

Glitches plague police dispatch system
Officers complain that $6.3 million system could put police, public in danger

By _Tony Plohetski_ (mailto:tplohetski@...)
AMERICAN-STATESMAN STAFF
Wednesday, November 24, 2004
The call popped up on the computer screen in an Austin police officer's patrol car last month, alerting him to a fire on Parmer Lane in North Austin.
The officer grabbed his radio, called a dispatcher and asked what was happening. The dispatcher told him she didn't know anything about it. He went anyway to secure the scene while firefighters extinguished the blaze.
The officer and his boss investigated, only to learn later that the department's new dispatching system had somehow routed the call from the 911 call-taker to the officer, bypassing the dispatch center.
The supervisor, Sgt. Dan Armstrong, saw the potential for disaster had the officer decided it was a mistake and did not respond.
"There was in fact a fire," Armstrong wrote to his lieutenant. "What if this was a burglary or a sexual assault, how could we explain that to the public?"
It was not an isolated problem.
Since the $6.3 million dispatch network was launched six months ago, officers and system managers have logged more than 100 problems, ranging from delays in getting information sent to and from computers mounted in patrol cars to dispatchers not knowing the location of officers on the streets.
City officials say no one has been injured and no calls have gone unanswered because of the glitches.
However, widespread concern among many officers prompted 14 of the department's 16 commanders this week to sign a memo to Chief Stan Knee expressing "several serious officer safety and citizen safety issues." It said they would prefer the department's former 18-year-old system to the new multimillion-dollar technology.
Under both systems, calls from the public — a fire or a burglary, for example — are answered by a call-taker, who types information into a computer and sends it to a dispatcher. The dispatcher, who tracks where officers are located in the city, then sends the information to the nearest officer mainly through computer but sometimes also via radio.
The new system was designed to help the dispatchers for law enforcement, firefighters and paramedics communicate instantly so they could coordinate responses in the field. Before the new system, they had to use the phone because their computer systems couldn't be linked.
E-mails and memos obtained by the Austin American-Statesman detail many of the complaints:
•At least four 911 or 311 calls put in the system by call-takers have been delayed several minutes before reaching dispatchers. Peter Collins, chief information officer for the city, said he thinks one call was high priority, but

he did not recall specifics of the incident. He said the company that sold the system, TriTech Software Systems in San Diego, has since fixed that problem.
•Officers have reported delays when they request information about outstanding warrants or vehicle owners, which dispatchers send to patrol car computers. Normally, a response would take 30 seconds to a minute. However, with the new system, it has taken several minutes to hours in some cases, leaving officers in the dark about possibly dangerous subjects.
•Some information has been inconsistent. One data search on a person by a dispatcher could show no criminal record, while a second search moments later could show prior arrests.
•Dispatchers at times have not known the status and locations of officers in the field because of delays in computer messages. That could leave dispatchers sending back-up officers to the wrong place.
"It is a precarious situation," Assistant City Manager Rudy Garza said Wednesday. "The new CAD (computer-aided dispatch) system was intended to improve the way our dispatchers and our officers respond to calls for assistance, and it hasn't done that yet."
Collins said the city does not think the problems are a result of user error. Officers have been told to rely less on their computers and more on their radios until the problems are fixed.
TriTech officials said in a written statement that the company has provided constant technical support to the city, including 3,000 hours since the system started.
"The CAD system is working, and the ability to respond to 911 emergencies and dispatch appropriate personnel has not malfunctioned in any way," TriTech chief executive Chris Maloney said in an e-mail. "I am personally flying to Austin next week with a team of our engineers to oversee the modifications to the messaging section of the system."
Collins, the city information chief, said, "This is a vendor issue, and the vendor is being held accountable."
Cities across the United States have been shifting toward linking dispatch systems since the Sept. 11, 2001, terrorist attacks.
Austin's network project began in the late 1990s when city officials decided the former system was outdated.
Collins said a committee consisting of representatives from the city's public safety agencies and the Travis County sheriff's department developed a list of several dozen requirements for the new dispatch system.
Five companies, including TriTech, which opened in 1992 and has developed systems in San Diego, Orlando, Fla., and Buffalo, N.Y., sought the contract.
TriTech officials said in their written statement that their equipment has processed millions of emergency calls with no significant problems.
Collins said the committee unanimously chose TriTech. The company began installing the system in 2001.
Austin Fire Department and Austin-Travis County Emergency Medical Services began using the network in April of this year, followed by police a month later. Garza said firefighters and paramedics have experienced only minor problems with the system.
The police department has had a different experience.
Officials said problems have been more pronounced among police because of the volume of calls and because officers must communicate more frequently with

dispatchers.
Mike Sheffield, president of the Austin Police Association, said he learned of problems with the system on its first day and quickly met with department leaders. He said the system still has too many problems.
"There comes a point where you say, this isn't getting where it should be," Sheffield said. "It is potentially putting people in harm's way."
Cpl. Rodney Moeller, who works in Central-West Austin, expressed similar frustration in an e-mail to his lieutenant last month. He said one of his officers was making a traffic stop at Justin Lane and North Lamar Boulevard and was attempting to arrest a suspect on outstanding warrants. The officer called dispatch, the e-mail said, and was told the "computer system had lost him."
The dispatcher told the officer he had disappeared from her screen and she didn't know his location — a serious problem had the officer needed backup.
"This system is going to get an officer hurt," Moeller wrote.
Collins said he has tracked problems daily and will present his lists to TriTech workers.
Garza said the company would not be paid in full until the problems are solved.
"It has been made very clear to them that they better get it done," he said. "We will do whatever we need to do to protect our officers and our citizens."

2591. $6.3 Million System will need more $$$

Yahoo group: CenTexComm
Date: 2004-11-25 15:25:07 UTC
From: Robert
Topic: 2591 Message: 2591

The city officials supposedly went all over, checking out the best system and this is the best they could come up with. They didn't need to go any further than San Antonio, TX. This exact same problem plagued San Antonio about 8 years ago. Tritech, the software/CAD vendor will blame Motorola, saying their computer system works but it's the glitches in the dead spots that causes computers to loose contact. Motorola will step in and tell the city that for another $3.5 million, they can "patch" the system. The city reluctantly, will do it, and it will get a little bit better but then the city will end up suing Motorola and then switch to another system in a few years. It's unfortunate that we are having to suffer the same radio problems that San Antonio went through 8 years ago. They could have done the new software using the old radio system and that system, the UHF system could have even been trunked to better use all the frequencies. Right now the quickest fix, would be to turn off the digital and make it analog. It would not cost anything and that's what they need to do. Well see what happens.

Don't forget, the Pro-96 is available Thanksgiving Day only online with a $150 rebate, making it $350. www.radioshack.com and search for 20-526. I will probably end up getting on and finally be able to do a true comparison between the Pro-96 and the BC296D handhelds. The Radio Shack base version is due out in January and will probably be $500. The Uniden base version, the BC796D does work fairly well and is still around $520 @ www.usascan.com. No where to buy the Uniden locally that I know of. Happy Thanksgiving everybody.

It's also an excellent arguement against laws in other states that ban
the mobile use of a scanner. Let's make sure that never happens in Texas.

Yeah...they have a new repeater channel on the south end of the county. 154.755 is primary receive and 154.685 is send.. but they just installed a new antenae on the sheriff's office and new computers to support the new repeater(s). I will post the channel when I get it...I have a friend on ems and they are gonna rewuest it from the s.o.

On Radioreference.com , I show 156.225R / 154.980M as Channel 2 for
Blanco County SO.

There is also a repeater on 158.760/155.955 that is fairly new and
unidentified licensed to Blanco County for 1 Repeater, 2 Fixed, and 60
Mobiles.

Any ideas?

Lindsay

From: Brian Scott
Topic: 2592 Message: 2599

The same goes for the DFW area. We have some 150 MHz systems, but I believe they are LTR too (and unconfirmed scanner settings, parameters, and system users). I haven't heard any Motorola data signals down in the 150 MHZ VHF range (yet).

We also have plenty of 400 MHz (and a good number of P25) Motorola systems up here, but 9 out of 10 of those are pretty boring (federal prisons, VA Hospitals, etc.).

Does anyone on this list monitor the Ft. Hood 900 MHz EDACS Narrowband communications on the TXU (now Encore) system? If so, has anyone heard of Ft. Hood moving to a new system within the next year? TXU will be the only user on their system within the next year.

Brian Scott
Ft. Worth, TX

There's a huge Motorola 400 Mhz Smartzone system down here in San
Antonio for the military bases:

http://www.radioreference.com/modules.php?name=TRSDB&sid=324

And there is the Fed Correctional Facility in Bastrop:

http://www.radioreference.com/modules.php?name=TRSDB&sid=558

Does anyone know who uses 162.2125? I have heard it
before, but very faint. I picked it up last night by
the IRS complex with the bc246 that has the Close call
function. And this morning, I heard it again. They
said security post radio check.

From: Robert
Topic: 2601 Message: 2602

162.2125 has to be that IRS or the Veterans Administration next door. I have monitored it before. Sounds like building ops. The IRS was on 164.175 and the Veterans Administration was on 409.025 Not sure if they are still using them.

How do you like the BC246?

I added a Pro-83, with Signal Stalker to my collection and I couldn't resist ordering the Pro-96 Thanksgiving Day since it was $150 Rebate making it $350 - I hope to get it soon.

I am getting use to it. Its not easy to program, but I
like it. I ended up paying $70 with shipping. Like
everything else it takes practice to figure the
programming. Thanks for the feed back.

From: Robert
Topic: 2605 Message: 2605

Williamson Co SO has someone cornered in a field. Wednesday night 11:40pm Air 1 heard about it and wanted to help.. after all they were bored.. they flew around and around in circles trying to figure out how to talk to the units on the ground.. they even called one of the main sergeants on Crit 1 to ask him if he knew what zone and what talkgroup they could talk to Round Rock. The sgt got out the manual but still couldn't find it. what a shame.. $6.2 Million for a radio system and they don't know how to work it.. They really should try and know this before they go up in the air. Ok they gave up on the digital 800, so they went back to talking on 154.950 and Williamson County is patching them through on their WCSO Tac 3 channel.

I'm an officer in an agency that's part of this "regional radio system" and I have to say that I don't even know all the channels that are available. The ones that are programmed into MY radio, however, seem to be overkill. I work far, far southeast yet I have what seems to be ALL of the Pflugerville channels, ALL of the AISD channels, and several other banks with names I might understand, but uses I don't.

I did, however, receive a call from the Wireless Office in Austin a week or so ago, and they wanted a copy of our current radio channel configuration (they didn't already have this?). I sent it and was notified that we needed to be re-programmed, and re-trained. This looks promising... it may be late, but I can guarantee you that there is a proactive effort, even if small in comparison, to train folks.

For now, we use what we know.

FWIW, I'm busy this week getting our agency (and from the email I got, SEVERAL other nearby agencies (whom I'm not free to disclose) ready to move to San Antonio PD's new CAD system - it'll allow police agencies to run driver licenses, wants/warrants, vehicle registrations, etc. (but explicitly NOT criminal history information, which requires STRICT control and logging not offered to remote agencies who must still get that from their primary dispatch agency) and will support GPS location services/mapping (not sure for how large an area outside of San Antonio). It's using GPRS (cell data) on a large cellular network, and a VPN connection from each provisioned system to SAPD...

It does NOT, however, provide for dispatching of calls via MDT (yet) because SAPD is *NOT* becoming the PSAP for these agencies, just the provider of mobile data services. Local agencies will still be dispatched by local dispatchers, we just won't be on the same MDT system because the regional radio system won't support the load (okay, the MDT part of the regional radio system). You've read Levy's mention about that, right?

From what I've seen, there's agencies as far away as D/FW migrating to SAPD's system - access is relatively cheap, relatively fast and very, very straightforward. They even set up the contract with AT&T so that an agency can get provisioned within 48 hours (24 for AT&T, and 24 for SAPD). Very, very nice. I can't wait to report on how well it works when we go live. Once again, San Antonio is leading the pack when it comes to mobile communications and data - even for agencies in the Austin/Travis County area.

Mike,

I work for Cleburne PD which is about 30 minutes south of Fort Worth off of I-35 and we use the San Antonio system for our MDC's. It is great to have access to information on the MDC's but one of the major drawbacks for us is we do not get the correct region returns which causes us to still run everything through dispatch. For us it is a step in the right direction, and maybe in time we will be able to progress and get dispatch information as well as the correct region information.

As you mentioned there are several agencies in the DFW area that are on the system. The returns are generally very fast. There is also access to the SAPD intranet site on the MDC's. It looks like SAPD is on the ball with their system. You can access daily briefing information, job opportunites, department policies, penal code, traffic code and other information using their intranet, very impressive. When ya'll get on the system send me a message I am 249.

I am surprised they didn't know. There must be multiple AIR1 crews or they have short memories. During the summer AIR1 surprised RRPD when all of sudden on RR South Command we all heard "Air 1 to Round Rock". They had ovviously found the right channel that night. It was another night where AIR1 was bored with nothing going on in Austin, and RR had a major traffic accident with fleeing suspects possibly armed.

From: Robert
Topic: 2516 Message: 2614

Traffic enforcement locations for the week

Monday, December 06, 2004

The Austin Police Department publishes a weekly list of locations where officers will focus on enforcing traffic regulations. Distributing the list is intended to help make drivers more aware of enforcement and thus increase compliance with traffic laws, the department says. This week's list includes these locations:

Monday, Dec. 6

Morning: Convict Hill Road

Afternoon: 8400 block of Spicewood Springs Road

Morning: Metric Boulevard from Rutland Drive to Gracy Farms Lane

Morning: FM 2222 between MoPac Boulevard and Loop 360

Tuesday, Dec. 7

Morning: 13000 block of RM 620 North

Morning: Braker Lane from North Lamar Boulevard to Burnet Road

Morning: 3200 to 3700 blocks of North MoPac Boulevard

Morning: Cumberland Drive

Wednesday, Dec. 8

Morning: Georgian Drive from Powell Lane to Rundberg Lane

Morning, Lake Austin Boulevard

Morning: Davis Lane

Afternoon: 12000 block of Research Boulevard

Thursday, Dec. 9

Afternoon: Walsh Tarlton Lane

Afternoon: 5000 block of Duval Road

Morning: Steck Avenue from Shoal Creek Boulevard to Burnet Road

Morning: Texas 71 East

Friday, Dec. 10

Morning: 2100 block of Cedar Bend Drive

Morning: Kramer Lane from North Lamar Boulevard to Burnet Road

Morning: 8000 block of Manchaca Road

Morning: 5400 block of East Riverside Drive

2616. Receive 2005 LCRA calendar: Celebrating 70 Years of Service

Yahoo group: CenTexComm
Date: 2004-12-07 19:44:53 UTC
From: Robert
Topic: 2616 Message: 2616

LCRA is celebrating 70 years of service in 2005. To highlight the milestone, and to thank you for subscribing to Currents, we are providing you the opportunity to receive LCRA's 2005 calendar.

The calendar is filled with beautiful photos taken at locations throughout the lower Colorado River basin, plus archival photos and information on LCRA's involvement with Texas communities during the past seven decades. Moreover, the calendar includes a listing of 1,200 events supplied by community organizations throughout LCRA's service territory.

If you would like a copy, please respond via e-mail to info@.... You need to include your name and complete mailing address. Be sure to write "2005 calendar" in the subject line. The deadline to respond is Dec. 15.

The calendar is a great way to start the New Year, and to join LCRA in celebrating a new era of serving Texans.

Go to LCRA's Web site, www.lcra.org <http://app.bronto.com/x/trackclick.php?id=1540213_6022ccb4_42247&url=http://www.lcra.org> .

Nearest signal I get a P25 voice channel on 868.0500. Nothing but fuzz
on 868.0125 from north Austin.

RR.com has very little info on this system (one control channel, that's it!)

Here's what I've got ... not sure how accurate it is ...

0076 853.9625
009A 854.8625
00B7 855.5875 control channel
00D4 856.3125
00F0 857.0125
00FC 857.3125
0118 858.0125
0124 858.3125
0140 859.0125
014C 859.3125
0168 860.0125
0174 860.3125
01E7 863.1875

Whoa! RR has this system listed twice ...

Once as a very sparse "Nextel Austin 3" system. The other as "*Motorola (WNSM930) System". However, RR also states this is a "*Motorola Type II Smartnet" system but I'm sure it is Type I. There are only Type I messages on the control channel. Most of the freqs agree with this system.

Not sure who the user/owner is but it's fairly active for a Saturday.

Commander, retired detective die in motorcycle wreck
Department mourns loss of popular couple.
By Tony Plohetski

AMERICAN-STATESMAN STAFF

Sunday, December 12, 2004

Austin police today are mourning the deaths of a popular commander and her husband, a retired detective, after they were killed in an off-duty motorcycle crash Saturday evening in western Travis County.

Cmdr. Shauna Jacobson, 46, a 20-year veteran who most recently supervised an investigation into Austin's rash of bank robberies, and retired Detective Malcolm "Kurt" Jacobson, 42, died at the scene on Texas 71 near Bee Creek Road.

The cause of the wreck was under investigation late Saturday. Police said Kurt Jacobson was driving the motorcycle.

Shauna Jacobson, who joined the department in 1984, had worked in the theft and sex crime units before becoming the first female detective assigned to the homicide unit, where she worked extensively to solve Austin's yogurt shop murders.

She made a name for herself on the cold case unit, digging through old files for new clues.

Kurt Jacobson retired from the department in 2002 after he was diagnosed with multiple scleorsis. He had worked as a Travis County sheriff's deputy before joining the Police Department about 15 years ago.

"We are devastated," Mike Sheffield, president of the Austin Police Association, said late Saturday. "They were two extremely, very well-liked people.

"We've had all the sadness we can take," Sheffield added. "Everybody is just reeling right now."

The wreck comes six weeks after police officer Amy Donovan was killed when she was struck by her partner's car while they were patrolling East Austin. Donovan was trying to chase a suspect on foot when fellow officer Adrian Valdovino attempted to use his car to block the fleeing man. He struck Donovan, pinning her against a utility pole.

Travis County sheriff's spokesman Roger Wade said the Saturday crash occurred shortly after 7 p.m. Within hours, Austin officers were expressing shock and sadness.

Fellow Cmdr. Duane McNeill said he used to call Shauna Jacobson "half-pint" and remembered that she used to run towork before she owned a car. Three years ago, she slipped McNeill a prayer she had written on a small piece of paper.

McNeill said he still carries the prayer, which says: "And must I keep giving and giving again? No, said the angel. Just give until the master stops giving to you."

"It is a tragedy above all tragedies to have somebody snatched like that in the prime of their life," McNeill said. "She had so much to contribute to the Police Department."

In a 2000 profile of her by Oak Farms Dairy, which each month salutes an Austin officer chosen for the honor by his or her peers, Jacobson said she considers law enforcement a kind of ministry.

"To meet people at the point of their need, this act involves love, kindness and justice," Jacobson said in the profile. "On a day-to-day basis, there are numerous opportunities to do all those things."

Jacobson was born into an Air Force family and worked as a waitress and cleaned and painted apartments to raise her then-infant son. She worked six years as a patrol officer after joining the Austin Police Department and later said she felt constantly scrutiny of her peers.

"So much was hanging on being successful," she said in the profile. "People don't know how powerfully motivating the drive to succeed can be when you are trying to provide for your child."

Jacobson added that she laughed at some of the mistakes she made. She tried dashing to an emergency call without removing a gas nozzle from her tank.

"Police work is my life's work," she said. "But my son is my life's art."

2625. Pflugerville Fire Dept on talkgroup ESD 2A ??

Yahoo group: CenTexComm
Date: 2004-12-12 15:30:20 UTC
From: Robert Barker
Topic: 2625 Message: 2625

Pflugerville has a haz mat gas leak on Wells Branch by Ropers night club. They are on a new talkgroup 3250, but I can't understand what they are calling it.. I think they are saying ESD 2A like Emergency Service District 2A, can anyone confirm? Does every ESD get a 2A and do they get a 1A also? They are ESD #2, Emergency Service District #2 so perhaps other ESD's would have their own "A" channel. This is part of what I'm trying to figure out.

My limited understanding is that the agencies themselves get to decide
on their channel designators... could be channel A, channel TAC1,
channel TALKAROUND, etc...

Mike :)

2627. Mismanagement and system failures at the Houston Emergency Center are creating a crisis

Yahoo group: CenTexComm
Date: 2004-12-13 13:06:20 UTC
From: Robert
Topic: 2627 Message: 2627

Some of the exact same stuff that is happening in Austin. System crashes and employees being mandatoried

Dec. 12, 2004
Houston Chronicle
Emergency at 9-1-1
Mismanagement and system failures at the Houston Emergency Center are creating a crisis
By SGT. JOHNNIE MCFARLAND
After more than a year of operation, a project that was touted to become another of the our city's shining jewels has turned out to be just another hyped-up monument to mismanagement and malfeasance.

The Houston Emergency Center was conceived as a multimillion dollar, state-of the-art, high-tech, low-maintenance emergency communications center. But it has been a deep and bitter disappointment.

The promoted cost savings anticipated by consolidating all emergency dispatch functions under one roof are, for all practical purposes, nonexistent. The dispatch center, bought (or more accurately, leased) and paid for, remains, as one Houston City Council member described it, a work in progress.

Why is the problem-plagued dispatch center still a center of controversy? Why has the local affiliate of the largest police labor organization in the nation refused to lift last year's vote of no confidence? Why have veteran dispatchers, call takers and supervisors chosen to retire early or seek employment elsewhere in droves?

Can the technical, operational and personnel problems be adequately resolved? And when, if ever, will they be?

These are all questions crying out for answers.

After the Sept. 11, 2001, terrorist attacks on America, emergency communications took on an enhanced importance. The 9/11 commission's report highlighted the problems with interoperability communication between the various agencies that responded to the attack. Citizens and emergency responders diedbecause of a number of causes. Fatal flaws attributed tocausing the deaths were: a lack of communication and misinformation.

Planned before the 9/11 attack, the Houston Emergency Center was supposed to alleviate those problems. But testing and implementation of the new computer-aided dispatch system failed miserably.

Why is the emergency center such a dismal failure? The most significant blunder was not soliciting genuine input from all users of the system, citizens included. Following the catastrophic failure of the dispatch system on its first day of operation, it took police officers four hours to explain the problems they experienced.

The Fraternal Order of Police was forced to file a complaint with the city of Houston's Office of Inspector General against emergency center management after it refused to comply with a city ordinance mandating that employees have a formal mechanism to voice their concerns. What is strange is that the provision giving the employees a forum to voice those concerns about the performance of the center was removed from the original draft of the center's standard operating procedures.

Obviously, HEC management and its employees are not listening to the same radio channel frequency. When the city's director of public safety tells City Council's public safety committee that there have been no major system malfunctions since May 2004, something is definitely wrong. Maybe the time when HEC employees scrambled for more than six hours in August to take and dispatch emergency calls after one of the system's temperamental meltdowns does not count as a major problem.

At the same meeting, the emergency center's director told the committee that she meets with employees all the time about issues. But most employees say they've never met the director, and others say they wouldn't know her by sight.

The public should not be given a false sense of security when the computer-aided dispatch system crashes and the public is told that 9-1-1 is still functioning. This is misleading and a disservice to the public. What good does it do to call 9-1-1 when the call is stalled there until the rest of the system is up and running? Citizens would probably have better luck and get a quicker response by running outside and yelling for help.

Use the crash of the phone system on Nov. 3 as an example. During this crash, call-takers had to play musical chairs to receive calls for police, fire and emergency medical service. If citizens did not get a busy signal when their calls were placed to the dispatch center, they had to wait while the 9-1-1 operators who took their calls had to physically get up from their consoles and allow either trained fire or police to take the callers' information.

In a state-of-the-art, multibillion dollar dispatch center, you might think taking calls for emergency response in such a manner is a slow process. You bet it is. And a slow process begets a slow response.

Houston is prone to flooding and the occasional hurricane, and the city has been identified by federal terrorism experts as a potential target, but it appears that emergency preparedness has been placed on the back burner. Emergency center employees were recently told that they would be locked in the center for at least three days in the event a hurricane came this way, but management had made no preparations to provide even temporary bedding or food for them and had not considered the employees' needs and concerns about family obligations or their own hurricane preparations at home.

In most catastrophes, once the initial report is made to emergency responders, citizens begin calling dispatch centers for updates, guidance, instructions and directions.

I recently asked some employees to take an Internet quiz on terrorism preparation. The questions were similar to ones that citizens would ask in the event of an attack, especially if a "dirty" bomb was detonated.

The results were abysmal.

It's widely known that call-takers and dispatchers in New York City unknowingly and unintentionally sent tenants to their deaths in the World Trade Center towers by giving bad

instructions, so why are our emergency personnel so untrained and so unprepared for what some terrorism experts say is a "not if, but when" attack?

How mismanaged can a dispatch center be when, after a year, the police department is finally sharing Amber Alerts about missing children with HEC call-takers? How dangerous is it for police officers when they receive a "combined event" call, whose response is shared with the fire department, and arrive at the scene to discover that information about multiple suspects armed with firearms was not included in the call slip?

Emergency center managers also blundered in their gross overestimation of the dispatch system's capability and ease of operation. Besides the continuous technical glitches that cause the system to be inoperable for hours at a time, or the slow response by the system to process commands and retrieve information, what about the wear and tear that is taking its toll on the true first responders, call-takers and dispatchers?

These emergency telecommunicators have battled for mastery of a non-user-friendly dispatch system for over a year that may never prove worth its cost or their effort to use it.

Center management's underestimation of the number of employees it takes to operate an emergency dispatch center in the nation's fourth-largest city has created a situation in which excessive overtime is the rule, not the exception. How can one expect employee morale to be maintained and improved when overworked employees have to sacrifice off days and take 16-hour shifts without notice? And yes, these employees are still be expected to perform critical multitasking processes while stressed and fatigue.

I have seen these employees cry when police officers are hurt and killed in the line of duty. I have seen their celebrations at the conclusion of a chase, and I have seen their concern when an officer cries out for help over the radio. I have heard the cheers and seen the tears. Moreover, although these men and women have protested publicly, written to and met with elected officials, and conducted an Internet campaign to expose the lies and reveal the truth about the emergency center, conditions continue to deteriorate.

The atmosphere is so bad that the divisional police commander threatens to transfer sergeants from other units to the dispatch center as a motivational/disciplinary tool.

Bosses should not run an emergency dispatch center like a sweatshop. Employees should not have to compare their working conditions to the risks of jobs in Iraq. Employees should not have to choose between spending time with their families or being charged with insubordination for not working additional shifts. Using discipline for minor infractions and disqualifications for merit increases should not be used to harass and intimidate workers. Management such as this does not foster loyalty. It breeds contempt.

In sports, the expression "dropping the ball" might refer to the loss of a game. If a call-taker or dispatcher drops the ball, the result could be a serious injury or the loss of life. As with any team, employees must have the necessary skills, training and equipment to compete. High morale is also critical, and management has provided neither.

So, to turn things around, what should the city of Houston do?

Judging from the dismal performance of the dispatch center, it's obvious that management had a faulty game plan from the beginning. It's time for Mayor Bill White and City Council to step up.

My suggestion would be to cut out the middleman. The center's management is an unnecessary layer of bureaucracy standing in the way of the smooth flow of information and accountability between citizens and the employees who take and dispatch their calls.

Emergency communications in the city might not have been perfect, but the police and fire departments know what it takes to manage their own dispatch systems and get the job done. They have done it before cheaper and more effectively.

Second-class management should not hinder efforts to protect Houston and respond to its needs in a first-class manner.

McFarland is a sergeant with the Houston Police Department in the Emergency Communications Division. Readers may e-mail him at jmcfarland@....

2628. Traffic enforcement locations for the week

Yahoo group: CenTexComm
Date: 2004-12-13 15:54:00 UTC
From: Robert
Topic: 2516 Message: 2628

TRAFFIC

Traffic enforcement locations for the week

Austin Police Department areas of concentration for the week of Dec. 13

* Live traffic updates
<http://www.statesman.com/traffic/content/traffic/index.html>
http://www.statesman.com/traffic/content/traffic/index.html

*

The Austin Police Department publishes a weekly list of locations where officers will focus on enforcing traffic regulations. Distributing the list is intended to help make drivers more aware of enforcement and thus increase compliance with traffic laws, the department says. This week's list includes these locations:

Monday, Dec. 13

Morning: Grady Drive from North Lamar Boulevard to Interstate 35

Morning: Wickersham Lane and Elmont Drive

Morning: Manchaca Road

Morning: 4000 block of Airport Boulevard

Tuesday, Dec. 14

Morning: 1800 block of East Martin Luther King Jr., Boulevard

Morning: North Lamar Boulevard from Walnut Creek Drive to Braker Lane

Morning: Highway 71 East

Morning: Westgate Boulevard

Wednesday, Dec. 15

Afternoon: Highway 71 West

Morning: 5000 block of Ed Bluestein Boulevard

Morning: Braker Lane from Metric Boulevard to Interstate 35

Morning: South Interstate 35

Thursday, Dec. 16

Afternoon: 5000 block of East Oltorf Street

Afternoon: Slaughter Lane

Morning: 4100 to 5000 blocks of North Interstate 35

Morning: Metric Boulevard from Research Boulevard to Rutland Drive

Friday, Dec. 17

Morning: Gatling Gun Lane

Morning: East William Cannon Drive

Morning: Powell Lane from Georgian Drive to Interstate 35

Morning: 3600 block of East 12th Street

2629. Bryan's new digital system just about complete

Yahoo group: CenTexComm
Date: 2004-12-14 03:36:18 UTC
From: Debbie & Sly
Topic: 2629 Message: 2629

System ID is A710 and it is in the RR database. See the RR database for freqs.

City of Bryan has been simulcasting on the new 800 digital system for almost a week now.
Been running trunker a lot lately. Looks kinda like the dispatchers for Bpd are using the new consoles, simulcasting on both vhf/800. Over the last several days I noticed a change in audio tone and quality plus just now I show an different id when the dispatcher talks. They have also been doing a lot of radio checks lately to mobile units.Apparently there has been some probs with that, as officers not hearing the dispatcher at times. So far mobiles units are still operating vhf. No mobile ids showing up yet. I haven't heard actual 800 only pd units yet except for one brief time on 55120.
Bryan Fire attempting to use the new radios today too.
I would imagine they will be just about fully switched over by the 1st of the year.

For LE so far I have:
If anyone can add to the list let me know.
All LE is p25 digital. Bryan fire and county fire is analog.

2630. Troubled dispatch center under review

Yahoo group: CenTexComm
Date: 2004-12-16 15:17:01 UTC
From: Robert
Topic: 2630 Message: 2630

When all else fails spend more money... This is what Austin will be doing very soon.

Word on the street is that the radio system still sounds awful and distorted. The transmitters are still out of sync. They could switch to analog today and solve 90% of the radio problems.

The computer dispatch system (like Houston) is still crashing all the time. This was supposed to be an all new deal and it was supposed to be perfect. At least that's what they paid for. Calls are still disappearing from the screen or getting lost. Officers are still reporting that they get random messages on their Mobile Data Computers and they have no idea what they all pertain to. (Like getting the wrong calls, being cleared off calls that they are still enroute to or not getting calls at all) The automatic vehicle location system is also not working correctly.

The funeral is today for the Shauna and Kurt Jacobson at noon. They will probably do a last radio call on Crit 1 or Crit 2 during the funeral. It will take place on Monterrey Oaks and then go to William Cannon. These were both excellent officers and it really unfortunate what happened. It will be interesting to see how APD brass continues to react since there were many other officers present at the biker bar that must have seen them leave intoxicated. None of the officers present stepped in to try and stop them. The problem is trying to tell a commander that she and her husband are too drunk to be driving.

Dec. 16, 2004, 12:15AM

Troubled dispatch center under review
The analysis was sought to unravel delays, glitches in emergency system
By RHEA DAVIS and KRISTEN MACK
Copyright 2004 Houston Chronicle

An engineering company hired by the city began a rigorous review of the troubled Houston Emergency Center on Wednesday in an effort to fix the technical glitches that have plagued the system since its inception last year.

The city is spending $162,185 to have MITRE, a nonprofit systems engineering company, conduct a performance analysis on the new system, which was designed to speed up emergency response times by consolidating the city's fire and police dispatchers under one roof.

On Wednesday, Mayor Bill White and Police Chief Harold Hurtt both acknowledged problems with the $53 million centralized dispatch center, which opened in 2003. Technical mishaps have, at times, caused delays in getting emergency personnel to people calling for help.

White said he thinks the center opened before the technology was fully tested and the groups that would have to work together had been adequately trained.

"It was premature," he said. "If you have too much change all at one time, you are going to have problems."

Hurtt said the departments are "working very diligently," and he hopes the analysis by MITRE will help get the center running smoothly.

"We've hired a third party to come in and review the system and process, and give us some insight on what our next step should be," Hurtt said. "We have to fix this problem. Next year at this time we should not be having these discussions."

Houston Emergency Center spokesman Joe Laud said Wednesday that MITRE officials have started interviewing police officers, dispatchers, firefighters and other emergency workers.

"They are going to evaluate the system and see if it is meeting the city's needs," he said. "They will make recommendations on how to make things better."

Laud said the study could take up to six months and will look at all aspects of the center, including the system's hardware and software.

Hurtt said he is not convinced the analysis will solve the problem.

"The investment has been made," he said. "I don't think we are at a point where we can say, 'OK, let's close the building and build a new system and move.' ... That may be the final answer."

Yet, rather than reverting to the old system, with three separate dispatch centers, White said he is determined to find a way to make the consolidated emergency center work.

He said MITRE is expected to give a preliminary assessment within a month.

In November, the dispatch center's telephone system broke down for more than an hour, causing delays for people calling for help.

MITRE, which has expertise in systems engineering and information technology, is affiliated with the Massachusetts Institute of Technology. It has headquarters in Bedford, Mass., and McLean, Va.

2632. Scanners R Us is a duplex

Yahoo group: CenTexComm
Date: 2004-12-30 05:06:42 UTC
From: Robert
Topic: 2632 Message: 2632

Scanners R Us www.scanners-r-us.com is located at 910A Keith Lane Austin, TX, 78705.
* I drove by this location tonight and it is a duplex. It is a regular house and the picture on their website is definitely NOT at this address: <http://www.scanners-r-us.com/index.php?action=about&orbiz0712043=0f74acaedd1f64ca05a2894535e4fbc1>
There is nothing to indicate it is even a business. No sign and the house is older so the little mailbox is that kind that on the brick wall just outside the door and the mailman has to go door to door on foot delivering the mail. There is definitely not a parking lot or anything at all. it is just an older house and it looks to be a duplex.

If you have any questions please call us toll free at 1-888-696-4516.
Our main business hours via phone are as follows:

Monday thru Thursday 11 AM to 8 PM CST.

Friday and Saturday from 12 PM to 6 PM.

We are closed on Sunday.

We are available almost 24 7 via email, so if you can not reach us via phone, please try emailing us at sales@.... Thank you.

If you would like to speak to a sales represenative over the internet you can click live chat on the main page

or sales@....

All shipping prices are flat rates, 1 item or 10 it's only $11.45! We will ship overnight for $45.95 via UPS Ground.

* Wow $45 is kinda steep for a scanner.

Hmmm, interesting Robert, Did you go knock on the door??
I have sent them a couple e-mails asking if they accept walkin traffic or have a store front for local sales and (like most companies) no reply. I have yet to call them. I am interested in getting a 796d in the near future and was going to drive over and buy one plus spend a few hours in your fine city listening to the 9600 p25 comms.
As for the $45 for over night shipping, that is about what it really cost. I think what they wrote is a typo. Notice how it says overnight then says via UPS ground in the same line.

2634. Scanners R Us is a duplex

Yahoo group: CenTexComm
Date: 2004-12-30 06:35:53 UTC
From: Robert
Topic: 2632 Message: 2634

Did you go knock on the door??

No, it was dark and from the looks of the house, it may just be someone doing something on the side. I don't have a problem with someone selling scanners from a house, I just feel uneasy when their website posts to picture that looks like an office setting and there is no way it was taken at that house. I don't blame you for wanting to come see them and get the radio directly but good luck. I guess keep trying to call them and see what happens. Let them know there is a fairly active scanner community here in Austin that would love to get some input from them on scanner news. You said you wanted to buy from them but I have to honestly say, there are better deals out there:

Uniden 796D $509.99 @ <www.scanners-r-us.com>
+ 11.45 Shipping
+ 43.02 Tax = $564.46

Uniden 796DGV $519.95 includes shipping and headphones. No sales tax when ordered out of state. @
<http://www.usascan.com/files/bc796d.cfm>

Scanners R Us www.scanners-r-us.com is located at 910A Keith Lane
Austin, TX, 78705.
* I drove by this location tonight and it is a duplex. It is a regular house and the picture on their website is definitely NOT at this address:
<http://www.scanners-r-us.com/index.php?action=about&orbiz0712043=0f74acaedd1f64ca05a2894535e4fbc1>

The website scanners-r-us.com
is registered to Aron Susman longhornstereo@...
281-701-9697 @ 5527 Caversham Houston, TX 77096
Creation date 7/17/04

Has anyone ordered anything from Scanners R Us? I just checked their tax status on the Comptroller's website and couldn't find them. This alone could be cause for concern.

Topic: 2632 Message: 2636

Oh yea I'm aware of the tax factor. But to be able to have the item "same day" would be worth it IMO, it comes out to be roughly $30 more than waiting a week to get from CEI. There ought to no shipping if I pick it up in the store you'd think? But if they have no "walk-up" counter and are strictly mail order then forget it, like you said I can mail order out of state cheaper. I'm not going to pay tax + shipping and then wait a week on top of that.
BTW- I noticed the "longhorn stereo" hotmail address below.
FWIW-I'll have to get on the houstonscan list and see what they know about that place possibly selling scanners.

The name of the picture is:
http://www.scanners-r-us.com/images/product/warehouse1.jpg
Maybe the "warehouse" is in a shed in the back yard. :)

FWIW-
In the e-mail Robert wrote earlier there was an e-mail listed that was
longhorn stereo in Houston that apparently has something to do with
Scanners r us. Someone responded back on the Houston list that lives
near the address and said it was a house too.

2640. AFD using computer voice to dispatch calls : (

Yahoo group: CenTexComm
Date: 2005-01-01 02:56:00 UTC
From: Robert
Topic: 2640 Message: 2640

What does everyone think of AFD's new computer voice dispatching calls on talkgroup 1124? They are using a computer generated voice to dispatch some calls. I hate it.. I hope they don't all go that way.

Wanted to wish everyone a Happy New Year in 2005.

Regarding the Houston address for www.scanners-r-us.com that address was the one that matched whoever registered for the URL web address. It just gives a Houston address, It doesn't necessarily mean there is a business in Houston. It could just be the name and the name of the person who took out the domain name (URL)

I heard Bastrop S.O. doing the same with their
dispatch. They were doing tests last week. A digital
voice was requesting a deputy to a courtroom.

2643. Don't forget the AFD and EMS live Feed

Yahoo group: CenTexComm
Date: 2005-01-06 19:39:20 UTC
From: Robert
Topic: 2643 Message: 2643

For those who are NOT digital and even if you are, don't forget that there is a great Live feed at http://www.scancentex.com/

The Austin feed includes:

Austin FD Blue 1-16

Austin FD Firecom 1-8

Austin FD Alarm 5

Austin FD Station Alerting

Austin EMS Control

Austin EMS Medcom N/C/W/S

Event 1-2

Austin Interop Red 4-9 (A-E)

Interop A-H

Lago Vista Fire

Pflugerville Fire TAC 2

Oak Hill Fire TAC 3

Travis County Fire Control TAC 4

Manchaca Fire TAC 5

Hudson Bend Fire

North Lake Travis Fire/Rescue

Pedernales Fire

Westlake Fire Tac 9

CE-Bar Fire Tac 10

Travis Co. Fire/Rescue

Manor Fire

Volente Fire

Texas Fire 1

Elgin VFD

Bastrop Fire Net,

But there is also a Williamson County feed, Houston Feed, etc.

From: jose esqueda
Topic: 2646 Message: 2646

I heard security for the new city hall on 453.225. It
is also the frequency for ACC. Has anyone seen any new
listing for this frequency? I also have the PL tone.
Any ideas?

I looked at their radios and they are not using the
new digital radios.

2647. RE: [CenTexComm] New City Hall and 452.675 for ACC and KEYE TV

Yahoo group: CenTexComm
Date: 2005-01-13 16:16:50 UTC
From: Robert
Topic: 2646 Message: 2647

I think ACC police are now using that UHF trunked system that is something like 452.675 and a few others.. It I think it was the one that we can't identify since there doesn't seem to be a license or listing anywhere.

http://groups.yahoo.com/group/CenTexComm/message/2270

from April 22nd this year:

I'm not finding a trunked system, with 452.675 even listed in Austin... can (anyone) give me the link to the system ..that has that frequency in it. I am very clearly hearing
KEYE and ACC (Austin Community College) Police on it. As far as I know this may be LTR. It

mainly will be on 452.675 but may occasionally jump to another frequency, as

if the 452.675 is the "home" channel. No there is no buzzing trunked channel.. It's like someone keys it up every few seconds.

2650. AISD on Austin/Travis County TRS

Yahoo group: CenTexComm
Date: 2005-01-14 14:30:37 UTC
From: ExLngHrn@aol.com
Topic: 2650 Message: 2650

I've been monitoring the Austin/Travis County trunked system at work lately. Has anyone else noticed that AISD may actually have a talkgroup for each high school? I seem to be hearing different talkgroups for each high school, used for hall monitors as well as custodial staff.

Has anyone noticed that the computer dispatching voice/locution system (PA system for ATCEMS/radio for AFD) has different sounds for different calls types? I think I actually heard the old buzzer sound from the TV show Emergency for certain high priority EMS and FD calls.

2652. AISD schools on Austin/Travis County TRS; AFD Tones

Yahoo group: CenTexComm
Date: 2005-01-14 21:23:06 UTC
From: Robert
Topic: 2652 Message: 2652

I have heard AISD schools in the 31xx talkgroup range, such as 3106 or 3102 .. They don't talk or say enough to identify what school. But it does seem like at least every high school would have a talkgroup.

I was hoping the AFD computer voice dispatch would be simulcast on 453.275 or some other UHF AFD frequency so everyone could hear it. It does take some getting used to and, there does seem to be all kinds of tones. I too have heard tones from the TV show Emergency!

The Pro-2096, the Radio Shack Base Version of the handheld Pro-96 will be out soon, hopefully by this summer.

2660. Computer dispatch system crashes for two hours --- Austin American Statesman

Yahoo group: CenTexComm
Date: 2005-01-19 14:14:41 UTC
From: ExLngHrn@aol.com
Topic: 2660 Message: 2660

By Tony Plohetski

AMERICAN-STATESMAN STAFF

Wednesday, January 19, 2005

For almost 90 minutes Friday evening, the computer screens of Austin's police, fire and paramedic 911 call-takers and dispatchers froze in midfunction, causing them to abandon multimillion-dollar equipment for ballpoint pens and white note cards.

The call-takers, who determine what kind of response is needed before routing calls by computer to dispatchers, wrote the information on cards and walked them to dispatchers several feet away.

On the street, police officers, paramedics and firefighters relied on radios instead of computers to talk to the city's communication center.

"Basically, we went back to 1983," said Mike Sheffield, president of the Austin Police Association.

City officials said Tuesday that the crash of a new dispatch system between 5:30 p.m. and 7 p.m. Friday likely delayed responses, but only by seconds. The city received 167 calls to 911 during that time.

The crash -- the first since May, when the system was unveiled -- came as city officials and technicians from the company that developed the system, TriTech Software Systems in San Diego, worked to correct dozens of previous problems, an effort that has continued for months.

The city bought the $6.3 million dispatch network to update old technology and to help dispatchers for law enforcement, firefighters and paramedics communicate instantly to coordinate responses in the field.

The city says one flaw in the system has been inconsistent information, such as one computer search of a suspect showing no prior criminal record while a second shows convictions. Emergency workers also have complained that calls entered by call-takers are delayed before reaching dispatchers.

TriTech CEO Chris Maloney said Tuesday that the dispatch system crash occurred because of glitches with the city's Microsoft server -- not because of problems with TriTech equipment. He said TriTech is working with Microsoft to find a solution.

Microsoft officials would not comment Tuesday.

"TriTech's software is just one component to a larger 911 system," said Maloney, who added that company technicians in Austin reported that the crash lasted 45 minutes and caused no delays in 911 responses.

"When hardware problems occur independent of the software provided by TriTech, the system can experience problems, which is what appears to have happened Friday evening," he said.

However, many of the city's dispatch problems have stemmed from the company's equipment, city officials said.

Peter Collins, chief information officer for the city, said Tuesday that the company presented solutions to the most significant problems last week and that officials are testing them. TriTech will try to correct the other problems by the end of March.

"They are bending over backward," Collins said. "They have been on site, and they have hired consultants to try to figure out what's going on.

"We are not out of the woods yet, but we do see forward motion."

However, Sheffield said officers continue expressing frustration at and distrust of the system and that two recent glitches, including Friday's problem, have increased their skepticism.

Last week, some officers experienced delays in getting information on computer screens in their patrol cars from dispatchers about an East Austin bank robbery -- another problem Collins said TriTech is working to fix.

"This system hasn't lived up to it expectations, and it doesn't seem to be doing any better than it was," Sheffield said.

Most of the serious glitches have affected police officers. Friday's crash of the system caused problems for all of the city's public safety agencies, however.

Collins said the system went down most recently in May, shortly after the city began using it. That disruption lasted about two hours.

Collins said he hopes that similar glitches do not occur in the future but that call-takers and dispatchers are prepared to return to the way they did business more than 20 years ago.

"The goal is to never have to go to cards," Collins said. "It puts a lot of pressure on a lot of different people. That is why it is so important we get the system back up as fast as possible."

This past week I ran into one of the officers from that group. He recently moved to the Georgetown area, perhaps he has a take home radio and/or car and is being asked questions. While not one of the command staff, I believe he is one of the more experienced patrol officers on that force. He also works the midnight shift.

I don't normally monitor that system, I may have to look it up and program it on in since I live in North Round Rock.

George

From: Randy
Topic: 2657 Message: 2662

Sorry, no wierd contracts, just a less than perfect radio system.
While on patrol our radios, like all trunked, search out the best
tower to use. It happens automatically and most don't know they have
switched towers.

The majority of traffic goes through a tower in Copperas Cove, but on
occasion an individual radio will think it will work better off
another tower. I would imagine this is the case in some of our
Southern patrol areas where signal strength and geographical
considerations may make the radio switch to Georgetown.

FYI, Ft Hood will eventually move to the Bell County EDACS 800 system
by fall of this year.

FYI, Ft Hood will eventually move to the Bell County EDACS 800 system
by fall of this year.

Thanks for the update Randy. I know TXU has decided to kick TXDOT,
CareFlite, and Ft. Hood (as well as any other possible users) off of their
system by 12/05. CareFlite will soon be on another system too, and TXDOT
appears to be implementing some new VHF-Hi frequencies in the DFW metroplex.
I□ve been wondering what Ft. Hood might do? Thanks again

Brian Scott
Ft. Worth, TX

2665. 911 dispatch system crashes again

Yahoo group: CenTexComm
Date: 2005-02-01 12:41:33 UTC
From: Robert
Topic: 2665 Message: 2665

What's going to happen is that TriTech, the software vender will come back and say that their computer system is fine. That it's the radios that can't handle all the traffic and they will shift the blame to Motorola. You can have the best computer in the world and the data only comes as fast as your fastest modem and the path it has to travel. In this case, the radios are being used to pass the traffic and voice and GPS.. it can't handle the load. There are way too many users on the system. It will be interesting to see how this plans out but basically they will have to spend more money than their original bid amt to get it to work better. Sure we can fix the problem, if you will give us more money. San Antonio had the same problem. - many years ago. Please take the digital away.
911 dispatch system crashes again
Same computer glitch that brought emergency network down Jan. 14 is blamed.
By Tony Plohetski
AMERICAN-STATESMAN STAFF

Tuesday, February 01, 2005

For the second time in less than a month, Austin's computer system for dispatching 911 calls crashed Sunday night, causing call-takers and public safety workers on the street to do business the old-fashioned way.

Dispatchers spent 90 minutes - from 7:45 to 9:15 p.m. - taking white notecards with handwritten addresses from 911 call-takers, then radioing police officers, firefighters and paramedics the places they needed to go.

"Nobody's safety was ever compromised," Assistant City Manager Rudy Garza said Monday.

Officials said response times might have suffered slightly during the crash, but only by seconds.

Ninety-nine calls were made to 911 while the system was down.

Call-takers, who determine which public safety agency should respond to a call and instantly route the information via computers, had to walk several feet from their workstations to dispatchers with each note.

Dispatchers, who generally send the information to crews

in the field by computer, had to use radios to give them addresses.

The crash was the system's second in less than a month.

It was added to a list of complaints that officers and other emergency workers have, including calls vanishing from dispatchers' computer screens and delays in routing calls from call-takers to dispatchers.

According to a Jan. 24 memo from communications supervisor Russell Evans, a call two days earlier vanished from a dispatcher's screen, preventing her (Russell is a guy) from knowing where to send assistance to an officer.

The memo doesn't say what kind of call the officer was on.

The e-mailed memo to representatives from the police and fire departments and Austin-Travis County Emergency Medical Services also listed dozens of other less serious complaints, which officials said they are working to correct.

"The officers on the street depend on it to work," said Detective Mike Sheffield, president of the Austin Police Association. "We shouldn't have to put up with a (computer-aided dispatch) system like this."

Garza said the same thing appears to have caused both crashes, and the problem has been traced to the city's Microsoft server, a component in the $6.3 million dispatching network by TriTech Software Systems.

Microsoft officials could not be reached for comment Monday.

Officials couldn't pinpoint the source of the problems when the system went down Jan. 14, but workers since then have installed equipment in the network that Garza said provided a report about what went wrong and why.

City officials and representatives from TriTech and Microsoft were reviewing the report Monday afternoon and hoped to find solutions to the problem in the next few days.

Garza said the city will continue to work with the companies to try to solve the system's problems and that officials, although increasingly frustrated, would rather fix the network than begin looking for a new one.

"The fact is that the system we paid for is not working to the level that it is supposed to," Garza said. "If we don't identify the problem, it is going to happen again."

Robert -

This doesn't look like a throughput problem, it specifically mentions Microsoft, which leads me to believe that the application is running on a SQL Server backend. It sounds like there's a reliability with the SQL server portion, and that Microsoft is backing up their assertion that SQL Server is performing appropriately, but that TriTech has some quirks in their code, their queries, their indexes or their database structure that is hitting a performance bottleneck. It's also likely that TriTech is pointing at SQL Server and the hardware its deployed on and claiming that there's a hardware bottleneck; whether it be disk throughput, memory usage/paging, or processor load.

Having been a consulting, working directly for Microsoft at large client sites such as this, I can appreciate how complex the problem likely is - there's probably several performance issues that have to be resolved, that weren't identified in the lab because it's damn near impossible to test actual, real-world load.

Anyway, I highly doubt that anyone will point at the radios.

Mike :)

PS - The above is just a guess, but it's a rather educated guess from my experience as a consultant, and my knowledge of Microsoft's BackOffice platform, design, deployment, architecture, troubleshooting and performance tuning.

2667. FS: Siren/switchbox

Yahoo group: CenTexComm
Date: 2005-02-02 17:10:03 UTC
From: Mike Reed
Topic: 2667 Message: 2667

From an old pickup I had that was used for VFD work, but is now retired...

Galls (Whelen copy) siren control/head unit. Drives up to 200W (two 100W speakers), 3 tones (wail, yelp, hyperyelp), momentary on, electric air horn, PA, etc. NO SPEAKER INCLUDED.

multi-switch switchbox, used to control lights, accessories, etc.

metal floor mount rack for siren and switchbox, has slot for two more accessories (radio, scanner, etc.) - perfect for storm hunters/weather watchers

$50 for all of it

Mike
293-6106

From: Glenn Morris
Topic: 2665 Message: 2668

I worked for Motorola in Northern VA. When we upgraded the Alexandria and Arlington systems we put their voice on one radio and data on a second one running on a separate system. The only trouble we had their was some spotty coverage that was ironed out by adding a few extra sites. (Their terrain is very hilly and 800 does not bend as well as the old 450.) Our system was designed with a lot of input from the techs (me) and the cops who did the initial field testing prior to the final build. Too bad the local Batwings didn't do it the same.

Regards,
Glenn

2669. Friday Mardi Gras and New Radio Shack base scanner out there

Yahoo group: CenTexComm
Date: 2005-02-05 18:13:54 UTC
From: Robert
Topic: 2669 Message: 2669

During Friday Night Mardi Gras there were 14 arrests and 40 Juveniles detained for curfew violation.

Most of APD was on their Events talkgroup. Interesting to note that TABC does not have that talkgroup. I think they should have it along with all the other police and EMS agencies who would be working an event like anything on 6th street, or a marathon or just about anything.

The radio shack Base scanner is now out. Can someone get one so I can come visit you and see how good it sounds.
<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F003&product%5Fid=20%2D496&hp=search> if that link does not work then go to www.radioshack.com and put 20-496 in the search box

From: jose esqueda
Topic: 2671 Message: 2671

Last week I went by the Capitol for a press
conference. I noticed that some of the house aids had
radios. I picked up two frequencies with my BC246.
They are both in the Austin/TC trunk. Since the BC246
does not pick up digital, I was able to hear digital
noise only. The seargent in arms in the house of
representatives are using the digital radios. I will
take my BC296 next time I go back.

Topic: 2671 Message: 2672

If I remember correctly, the earliest discussions of the Austin/Travis County digital trunked radio system specifically mentioned that the Texas Legislative Council would be using the new radios. As I remember, the Texas Legislative Council provides computer and communications services to the Texas House of Representatives and the Texas Senate among its various support functions to both houses of the Legislature.

I'm always amazed at the number of these digital radios out there. It seems that each AISD high school (and possibly middle school) has a separate talkgroup on the radio system, along with radios used by the principals, assistant principals, and hall monitors.

I haven't yet heard any. However, I'm guessing that the administrative type of traffic that would be associated with the Legislature sounds remarkably like city or county government operations on the radio. In other words, I doubt we'll hear legislators chatting about which bills to support. But copier and computer repairs are going to be there.

Thanks

2676. Law Enforcement frequencies for the Austin area?

Yahoo group: CenTexComm
Date: 2005-02-19 15:57:07 UTC
From: Robert
Topic: 2676 Message: 2676

Was there something in particular you were looking for? All Austin Police and Fire and most other city services are on their new 800 Mhz Digital System and no longer simulcasting on the 460's and 453's.
This requires some of the newest scanners out there. Radio Shack Pro-96 and The new base 2096 along with

Austin EMS still uses 462.975 to set off their voice pagers and 155.715 for County
AFD still uses 153.950 for Firenet (volunteers)

http://www.radioreference.com/modules.php?name=RR&mid=4 is a good source for frequencies in the area.

2677. Capitol Metro transporting patients; AFD Emergency 1 talkgroup

Yahoo group: CenTexComm
Date: 2005-02-19 20:54:03 UTC
From: Robert
Topic: 2677 Message: 2677

Saturday 2:35 pm for the first time in history (that I know of) I am hearing EMS or well er.. Capitol Metro will transport all the patients via Capitol Metro bus from an MVA involving Capitol Metro.. (short bus- special transit bus) to Brack.. with EMS crew on board the bus. They are using Blue 16 to coordinate the escort ambulance with the split crew on the bus.

My friend who lives in Houston said that when a Metro bus in Houston gets in an accident. they lock the doors of the bus to keep anyone from getting on or off until they get a patient count and signatures. What was happening before was that a Metro bus would have an accident and people jump on the bus so they can be part of the "injured" so they will get benefits from Metro or whoever hit them. Kind of sad that people take advantage of the system like that. Also starting to hear EMS crews say that they are at the hospital with the patient "waiting on a bed". The ambulances are sometimes being tied up for a lot of non-serious runs.

Also during the fire Midtown Live club fire last night a RIC team (Rapid Intervention Crew) was talking to another RIC team on "Emergency 1" or perhaps it is Emergency One. The talkgroup was 1146. I sent a message to update www.radioreference.com. There are still so many AFD talkgroups that we will never know about until someone talks on them. Same with EMS, UT, TC parks,

2680. Law Enforcement frequencies for the Austin area?

Yahoo group: CenTexComm
Date: 2005-02-21 02:09:19 UTC
From: Robert
Topic: 2676 Message: 2680

Oh ok well here are the links:

Williamson County Sheriff's Office,Cedar Park Police,Sam Bass FD and Round Rock FD.

<http://www.radioreference.com/modules.php?name=TRSDB&sid=78>

Requires a trunked radio such as the Uniden Trunktrackers or Radio Shack models.

Jonestown police will use 155.670 but they are also go out on traffic stops talking to Travis County Sheriff's Dept (Adam Radio)on 800 Mhz digital trunked Radios. TCSO Adam sector simulcasts on 155.310 But to hear other Travis County/City of Austin traffic, including APD's Air 1, you will need to monitor the digital system: <http://www.radioreference.com/modules.php?name=TRSDB&sid=2>

STAT Air operates on 462.95 (I'm told) mainly with a repeater in Temple and they say one in Georgetown but it must be really weak cuz I can't hear it from Mopac and Parmer. I recommend programming in the repeater's input 467.950 to hear them in the air when they are close.

Critical Air also operates in the area on 460.825, and the La Grange Critical air has a repeater in La Grange on 461.575 but you can put in the repeater's input 466.575 to hear them when they are close.

Helicopters coming to Brackenridge Hospital can talk to Brack security on 128.850 (AM) They will also use this to coordinate while in the air with other helicopters responding to the same calls.

<http://www.radioreference.com/modules.php?name=TRSDB&sid=48> &sid=48>

Getting There: Ben Wear

Little-known 'courtesy patrol' lends a hand on the road

AMERICAN-STATESMAN STAFF

Monday, February 21, 2005

Rusty Davenport is my hero. Yours, too, probably, if you ever get in trouble on a freeway in the Austin area.

Since 1997, Davenport has been part of the Texas Department of Transportation Austin district's Highway Emergency Response Operator team, or HERO, although the team's three trucks until now have carried the label "courtesy patrol." Davenport says the trucks' labels will be changed to "HERO" soon. Too many people thought they were some sort of shuttle service.

What they are -- and if you're like me, you probably didn't even know the patrol existed -- are friends for people who find themselves with a disabled car on Interstate 35, MoPac Boulevard (Loop 1), U.S. 290, U.S. 183 or Texas 71. A patrol member, two of whom will be on duty from 6 a.m. to 10 p.m. once they get fully staffed again, will change a tire for you or pump up a tire, give you a free gallon of gas or jump a dead battery, tow cars (or even 18-wheelers) off the highway to safety, lend a cell phone or simply calm down a distraught driver who is waiting for police or an ambulance. They also remove road debris and provide traffic control at accident scenes.

Davenport has been patrolling the morning shift by himself lately, and it's just too much. Fort Worth, by comparison, has three trucks out at all times during the week, and Houston, which uses Harris County sheriff's deputies, has nine on patrol.

Aside from being a comfort, this kind of service can decrease traffic congestion. Traffic experts say every minute a vehicle blocks a road causes five minutes of traffic delay, and secondary accidents occur farther back in the jam. This sort of "incident management" motivated Houston to create its controversial Safe Clear program mandating automatic and speedy towing when a car breaks down on a major freeway.

The approach for now is less invasive in Austin, with free tows off the freeway and the courtesy patrol program. But officials are watching Safe Clear to see what effect it has on traffic and accidents.

Davenport, hosting me in his truck for a few hours recently, warned that we would probably see something "weird, strange or unbelievable." It was kind of a slow morning, though, and about the oddest thing we saw was a three-car accident on the opposite side of I-35. People were outside their cars, and traffic had already stacked up. In the two minutes it took Davenport to circle back, it had vanished save for a few small pieces of chrome and glass on the roadway. We found nothing down on the frontage road, either. Strange.

He recalled a former colleague coming up to a car on the shoulder, only to find that it contained a woman nursing a baby. He backed away. It is, after all, a courtesy patrol.

Davenport's oddest anecdote involved finding a woman in a vehicle on the shoulder dealing with a baby that was simultaneously losing fluids from both ends. He likewise kept his distance.

"That's definitely not in the job description," said Davenport, the father of a teenager. "I'll change a tire, but I won't change a diaper. I'm past those days."

Getting There appears Mondays. For questions, tips or story ideas, contact Getting There at 445-3698 or bwear@....

From: Robert
Topic: 2684 Message: 2684

I have put in the frequencies that are listed in the
Radio Reference website. But I am not receiving very few messages.
And most of those are garbled or partial messages.

There are several data files that may help you if you want to try them.
They are in the files section: <http://groups.yahoo.com/group/CenTexComm/files/>
There has been an issue with SOUND SETTINGS on the BC296D the most common one seems to be
533 you might check your settings.

2688. Digital DPS In N Texas

Yahoo group: CenTexComm
Date: 2005-03-07 21:10:00 UTC
From: commscan
Topic: 2688 Message: 2688

Hi Group,

Just an FYI for those interested:

A dfwscan member posted a message over the weekend regarding DPS' use of 156.2175 (not 159.2175 like listed) broadcasting P25 communications. He didn't have a digital scanner, but as soon as I programmed in the frequency, Wichita Falls DPS and many mobile units were coming in loud & clear. They've been running a STEP program over the weekend and traffic on the P25 channel has been abundant.

Topic: 2688 Message: 2691

Hi Walt & List,

It's good to see you on this list too Walt. I'm using a PRO-96 (sometimes), but my primary digital scanner is the BC296D. I'm not trying to start a debate here, but I feel it offers so much more than just "digital" capabilities. Both scanners work great on P-25 comms.

STEP, which I've seen other reported descriptions that all mean the same thing, stands for Safety Traffic Enforcement Program. When I lived in Harris County, I use to ride with STEP officers for the SO who many times worked around road construction sites. The STEP officers today, like in the case with DPS, seem to perform more of a ticket crackdown type function. I guess they are sort of a ticket writing task force that targets areas where a lot of wrecks, speeders, or any other type of violations occur.

I hope this helps .

Yep, it's been a long way since the RCMA days. Scanning was more fun back in those day. Thinking you were TX-01 or some low number.

CCP?, think you are talking of a CHL? Both times that I had to "qualify" for mine there were old folks there that could barely see the targets at the minumum distance. They qualified. Scarry though of them carrying guns and trying to use one.

2699. AFD 1A or A1 and SXSW 460.8625/460.7375

Yahoo group: CenTexComm
Date: 2005-03-13 14:41:08 UTC
From: Robert
Topic: 2699 Message: 2699

AFD had a bad fire this morning and 2 of the units mentioned going to A1 or 1A to talk to each other. New talkgroup perhaps?

SXSW (South by Soutwest music festival is going on all this week and they are using that radio system that keeps popping up again and again at all events, fun runs, etc:

All conversations start off on a home frequency: 460.8625 It is non-stop traffic all night long. This is the primary freq and all talkgroups will be here until this freq is busy and then it will go to 460.7375 There may be others but I don't have the other frequencies.

Is anyone out there having really good luck with reception on hearing the Trunked Radio System? I'm told by at least one person that a directional antenna does help. Has anyone bought a Pro 2096 base scanner?

<www.ScannerMaster.com> has both the Pro-2096 base and the Pro-96 handheld radios available at a special sale price of $449.95 which is $50 off the regular retail Until March 15th

2702. Monitoring Williamson co system with a Pro-2052

Yahoo group: CenTexComm
Date: 2005-03-17 06:27:34 UTC
From: Robert
Topic: 2702 Message: 2702

Well let's see.. looking at the RS Pro 2052 manual page 32 - Programming Trunked Frequencies
http://www.radioshack.com/images/ProductCatalog/Manuals/OME20-432.pdf
figure out what bank you are going to use. I suggest bank 1

1) Press the TRUNK and hold it down until the radio beeps twice (about 2 seconds) (bank, Trunk and the bank numbers flash)
2) press a number key to choose the bank you want this system to be in.
3) use arrow up or arrow down to select the system = E2-800 for Williamson county uses Motorola System 851.-868.9875, then press E (it should go to the first channel in that bank)
(we are now on manual page 33)
4) then use the number keys to enter the trunked system's frequencies.
Williamson County's system is at
<http://www.radioreference.com/modules.php?name=TRSDB&sid=78>

854.9625 854.9875 855.2125 855.7125 855.9875 856.9625 856.9875 857.9625* 857.9875 858.9625* 858.9875 859.9625* 859.9875 860.7875 860.9625* 860.9875

You will enter these frequencies . you enter a frequency and
5) press E and then use manual or arrow up to select the next channel. Repeat steps 4 and 5 until you have entered all the frequencies. You will have entered 16 frequencies.

Scanning a Trunked Bank
1) put the radio back into scan mode.. by pressing SCAN (you may have to press MANUAL then SCAN)
2) then press TRUNK; indicators for all the banks will flash and trunk and bank will appear
4) use the number keys to select the bank you choose to put the system in, in step 2 above
5) press SEARCh and you should be done and it will begin giving you all the TALKGROUPS that are being used. Refer to the radioreference link from above to id those talkgroups.

If you want to lock out an ID press L/O while it's stopped on that talkgroup (page 36)
if you want to follow the conversation on that talkgroup you can press HOLD while they are talking and press SEARCh to resume

Mystery channel ...

Can't seem to find this on the FCC ULS website. It's some kind of low baud rate FSK data. Scratchy but there. It might be an MPT1327 control channel. Anyone know what this one is ? You can hear it up on the north (north of 2222) or far west side (west of 360) near Austin.

Believe you are hearing 450.0100 MHz, which is a common TSL, or
Transmitter-Studio Link.
Used to monitor broadcast transmitter quality, or certain facility equipment
parameters.
Licensed to CCB Texas Licenses, they also operate a Marti on 450.450 and
455.450 MHz from a tower south of 360 and W Lake Drive.
Most likely used for KPEZ radio station on 102.3 MHz.

Didn't happen to notice those particulars about the beam antenna but the
azimuth looks about right since the studio looked to be southeast of the
transmitter.
Can't believe the beamwidth is 70 degrees, though. Doesn't seem very tight.
Must not have many elements. Only has to go a few miles and it's probably
line of sight so doesn't need to be that tight or that strong.

Decatur is the only agency I've heard of in Texas using MPT1327.

RCMA DAZE! Wow! No, I wasn't TX-001, I think Robert Barker came close to that, I think I was TX013. I may have to break down and scrape up $200 or so needed to get the CCP (Concealed Carry Permet as it is called now, i think). I think I can at least hit the broad side of the barn from 10 feet.
Dave.

2717. Fire Marshall on TC OEM and AFD on Icall

Yahoo group: CenTexComm
Date: 2005-03-30 12:45:05 UTC
From: Robert
Topic: 2717 Message: 2717

This morning I heard a Travis Co fire Marshall on 2332 (TC OEM) he called it Fire Marshall Admin. He was calling someone who was not answering.

Also a few days ago one of the AFD units needed to speak to an Investigator. They ended up on one of the I-calls which is not digital and not trunked.. So don't forget to put those in too. I think it was 866.0125 - Put those in even if you don't have a trunking radio. 866.0125 866.5125 867.0125 867.5125 868.0125 Technically any pursuit or anything should be simulcast on one of these and it is a way where Williamson County can talk to Austin/Travis Co

Ok guys..heres where I stand. In Blanco County there has been a rif between the S.O. and the dps. So much so that the S.O. tried to get the dps officers transfered out. Anyways...long story short...they are still here..but now they no longer use the s.o. to run traffic. They are using dps Kerrville. I have a uniden bct8(been awesome so far) I have the channel that they broadcast to kerrville on..but not the receive channel. I know I should be able to pick it up..they are only 55 miles away. I get Capital dps out of Austin, 45 miles away. I also get Brownwood hospital emargancy room...70 miles away? I have a discone mounted around 35 ft up. I also get all the San Antonio dps stuff. I used rr database...loaded all Kerrville police s.o. fire ems as of today. Dps is still broadcasting and still nothing... any ideas??
thanks,
james

2720. DPS in Blanco county talking to Kerrville on ?????

Yahoo group: CenTexComm
Date: 2005-03-30 21:38:44 UTC
From: Robert
Topic: 2720 Message: 2720

All I can suggest is to try the obvious:

155.460 DPS base but probably Austin that you hear

155.445 could be DPS Kerrville but most likely you hear Capitol Police on this one.

159.210 mobile relay but repeater is in New Braunfels and in Paleface (off Hwy 71)

159.090 mobile relay

What channel are the troopers talking to the dispatcher on? Is it 154.680 or 154.665 or 154.695? Should be one of those.

I do not know of anywhere in the state where DPS troopers (actual troopers not toll road police, capitol police or any other special divisions) talk to their dispatchers in 100% digital APCO 25

I know it's being tested and simulcast in some places but I do not know where it is being used 100% and no analog is being used at all.

2722. DPS in Blanco county talking to Kerrville on ????? could it be LCRA's system

Yahoo group: CenTexComm
Date: 2005-03-30 22:29:51 UTC
From: Robert
Topic: 2720 Message: 2722

DPS in Blanco Co also could be using LCRA's 900 MHz system. If you have a trunk tracker, try that system. If you don't have a trunking scanner then you can still put in the frequencies but it may be a bit harder to follow:

From www.radioreference.com <http://www.radioreference.com/>

919

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=919&d=trsinfo','height=375,width=500')> Blanco North

01 936.7500*

02 937.1750

03 937.6750

04 938.1375

05 938.7500

06 935.2000

07 936.1875

08 937.2375

09 938.2375

10 939.4875

923

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=923&d=trsinfo','height=375,width=500')> Blanco South

01 935.4375*

02 935.9000

03 936.3875

04 937.4875

05 938.4750

06 936.4250

07 937.3875

08 937.6500

So you can enter the frequencies into your scanner and see what you get...
Leave off the (buzzing) control channel which is usually ch 1

If there is too much traffic on these; then put in the inputs to hear only
what is close to you. For the inputs, subtract 39.0 MHz from the frequency,
so 937.175 would be 898.175

That sounds right. This used to be Sysid 5929 - a type I system - the
controller for which up and moved last year. I guess this is the new
Type II replacement.

2727. AFD Computer Voice Dispatching

Yahoo group: CenTexComm
Date: 2005-04-05 14:33:54 UTC
From: ExLngHrn@aol.com
Topic: 2727 Message: 2727

I just heard the computer voice (aka "locution") dispatching Manchaca FD on TG 1162 on the Austin/Travis County trunked system. RadioReference shows this talkgroup as "AFD Disp to Pflugerville." I think this is actually the talkgroup for station speakers for non-AFD stations dispatched by Austin.

Also, when Manchaca FD was dispatched, they were assigned to Medcom South. So, at this point, I think we can conclude that Pflugerville, Oak Hill, Westlake, and Manchaca Fire Departments are all on 800 mhz.

Highway enforcement officers aim to clear wrecks more efficiently and target violations.

By Tony Plohetski <mailto:tplohetski@...>

AMERICAN-STATESMAN STAFF

Tuesday, April 05, 2005

The Austin Police Department has developed a new way to combat speeding and other offenses on the city's roads: asking those who travel them each day to squeal on their fellow drivers.

The new highway enforcement command has set up a telephone line - the number is 974-4440 - for motorists to share their comments and suggestions about traffic. Officers will review messages a couple of times a week and will determine, in part, where they conduct special initiatives based on drivers' messages.

"It is an opportunity for the public to give us direct feedback, perhaps to even tell us things we don't know," said Austin police Cmdr. David Carter, who heads the department's newly formed highway enforcement command. "People can make a difference."

The telephone tip line is one of several efforts Carter has taken in establishing the new group, which includes four sections that officials hope will target traffic violations and become more efficient at clearing major roads after wrecks.

The command, made up of 70 officers, was formed after the city suffered an increase in fatal accidents. Last year, 73 people died on the city's roads, compared with 52 in 2003. Last year, 84 people suffered serious injuries from traffic wrecks.

Carter said that while those deaths and injuries have serious consequences for families, they also carry an economic impact. Using guidelines from the National Highway Traffic Safety Administration, Carter estimated that the impact in Austin was $104 million, which accounted for lost wages among the injured and those stuck in traffic after wrecks, trying to get to work.

In the past, officers assigned to patrol divisions were responsible for highway enforcement duties.

But Carter said the department has decided to take a more comprehensive approach since, for example, a wreck that happens on one part of Interstate 35 can affect traffic miles away on the highway.

He said officers will become experts in clearing collision scenes, as well as working with patrol officers throughout the city to reroute traffic.

"The community can't stop based on a single incident," Carter said.

The command will consist of the highway patrol and response section, which will respond to rush-hour collisions on major highways. The DWI section will enforce drunken driving laws throughout the city, and the vehicular homicide unit will investigate fatal and serious injury collisions. In the past, fatal wrecks were investigated by the major traffic investigations unit, which has been renamed and had more officers added.

The department's helicopter also has been assigned to the command to expand its role of traffic enforcement.

FYI, the former L&W units which identified on APD radio as LW XX (XX being a 2 digit number) are now HE (Highway Enforcement) and a 3 digit number.

Subject: [CenTexComm] Got a traffic gripe? Call new police command's tip line 974-4440

Highway enforcement officers aim to clear wrecks more efficiently and target violations.

By Tony Plohetski <mailto:tplohetski@...>

AMERICAN-STATESMAN STAFF

Tuesday, April 05, 2005

The Austin Police Department has developed a new way to combat speeding and other offenses on the city's roads: asking those who travel them each day to squeal on their fellow drivers.

The new highway enforcement command has set up a telephone line - the number is 974-4440 - for motorists to share their comments and suggestions about traffic. Officers will review messages a couple of times a week and will determine, in part, where they conduct special initiatives based on drivers' messages.

"It is an opportunity for the public to give us direct feedback, perhaps to even tell us things we don't know," said Austin police Cmdr. David Carter, who heads the department's newly formed highway enforcement command. "People can make a difference."

The telephone tip line is one of several efforts Carter has taken in establishing the new group, which includes four sections that officials hope will target traffic violations and become more efficient at clearing major roads after wrecks.

The command, made up of 70 officers, was formed after the city suffered an increase in fatal accidents. Last year, 73 people died on the city's roads, compared with 52 in 2003. Last year, 84 people suffered serious injuries from traffic wrecks.

Carter said that while those deaths and injuries have serious consequences for families, they also carry an economic impact. Using guidelines from the National Highway Traffic Safety Administration, Carter estimated that the impact in Austin was $104 million, which accounted for lost wages among the injured and those stuck in traffic after wrecks, trying to get to work.

In the past, officers assigned to patrol divisions were responsible for highway enforcement duties.

But Carter said the department has decided to take a more comprehensive approach since, for example, a wreck that happens on one part of Interstate 35 can affect traffic miles away on the highway.

He said officers will become experts in clearing collision scenes, as well as working with patrol officers throughout the city to reroute traffic.

"The community can't stop based on a single incident," Carter said.

The command will consist of the highway patrol and response section, which will respond to rush-hour collisions on major highways. The DWI section will enforce drunken driving laws throughout the city, and the vehicular homicide unit will investigate fatal and serious injury collisions. In the past, fatal wrecks were investigated by the major traffic investigations unit, which has been renamed and had more officers added.

The department's helicopter also has been assigned to the command to expand its role of traffic enforcement.

From: Mike Reed
Topic: 2728 Message: 2733

Why? Does AFD change the unit numbers of the engine based on shift? Do they dispatch Engine 21A, 21B, etc? Why does EMS feel the need to make things MORE complex? Can they not change crews without changing unit numbers?

Mike :)

Heck if I know, Mike. Just the information I found out, then confirmed on the radio. I thought I'd pass it along in case people were wondering about the funky unit numbers on EMS.

2739. AFR Tac 1 and 2

Yahoo group: CenTexComm
Date: 2005-04-12 13:31:30 UTC
From: Robert
Topic: 2739 Message: 2739

The AFD AFR (Airport Fire Rescue) http://www.ci.austin.tx.us/fire/afr.htm

Use talkgroup 1139 as AFR Tac 1 possibly radio channel B-11 (Zone B Channel 11)

And 1140 as AFR Tac 2 last night they told responding units that this is in Zone B Channel 12 on their radios

Does ANYONE? Have any contact or know of ANYONE at AFD that can give us a list of what each channel description is by zone.

It may be years before we figure all this out.

ARFF stands for Aircraft Rescue and Fire Fighting. ARFF is the terminology that the Federal Aviation Administration (FAA) has dictated for the airport fire departments across the nation to use for all official communication and correspondence to the Federal government or any other official entity when speaking about airport fire fighting operations.

2741. DPS in Blanco county talking to Kerrville on 159.2175 Narrowband

Yahoo group: CenTexComm
Date: 2005-04-13 19:50:26 UTC
From: Robert
Topic: 2741 Message: 2741

Well It should really be on 159.21 but perhaps this is on the new licensed Narrowband split 159.21750

So who is on this 159.22? Is the Kerrville base talking to the mobiles on 154.665 or is it a repeater and you are hearing both sides on 159.22?

For those keeping score, DPS has new licenses on Narrowband freqs:

154.67250

2742. Re: DPS in Blanco county talking to Kerrville on 159.2175 Narrowband

Yahoo group: CenTexComm
Date: 2005-04-14 20:44:22 UTC
From: jfstx
Topic: 2741 Message: 2742

As I said in my email....when i program the 159.21750..the scanner automatically changes the frequency to 159.220. I'm almost sure it is base to mobiles..as I pick up mason, fredericksburg, Johnson City and Junction dps all talking to Kerrville.

2743. unkown Bell Co Trunked system

Yahoo group: CenTexComm
Date: 2005-04-20 13:50:32 UTC
From: Aaron Slaughter
Topic: 2743 Message: 2743

As taken from www.radioreference.com........
These are for an unknown trunked system in Bell county. Please send
replies to radioreference.com under the Texas Forums

The frequencies are as follows,
861.9125
862.9125
863.9125
864.9125
865.9125

These are the ID's I've captured,
9040
9200
5136
12368 Pest control?
12831
17472
17488
17504
17552
32512

I believe this is type2 motorola, but sometimes there is no ID.

Topic: 2745 Message: 2745

http://www.austinfiremuseum.org/
Museum Grand Opening April 23rd,
2005 at 10AM 401 E. 5th Street, Austin, Texas Supposedly other fire departments will be there with their apparatus. <-- sorry for the late notice but this sounds interesting. and probably about the only time that you may find decent parking downtown.
I'm gonna go see if I can find an AFD radio to look at.

Also you might want to check out http://www.redpoppyfestival.com/ in Georgetown this weekend. It's something to do on a nice weekend.

From: Robert
Topic: 2749 Message: 2749

Yesterday morning I did hear an HE Highway Enforcement unit on

996 3e4 D L & W APD License & Weight Austin Law Enforcement

and was calling it the "Highway" channel.. I figured they would have go and rename it.. of course they did not go back and change everyone's radios which will make it even more confusing.. so for some vehicles .. including most APD cars it say L&W and for others, it will say Highway. It's funny how every few years they try a new program, trying to combat traffic problems.

2751. Air Evac Lifeteam acquires Critical Air Medicine's Texas rotor-wing operations

Yahoo group: CenTexComm
Date: 2005-04-30 14:12:03 UTC
From: Robert
Topic: 2751 Message: 2751

Air Evac Lifeteam acquires Critical Air Medicine's Texas rotor-wing operations

On April 15, 2005, Air Evac Lifeteam announced it has acquired Critical Air, Inc., the Texas-based rotor-wing operations of Critical Air Medicine, Inc., a privately owned air medical transport program.

Air Evac Lifeteam President and CEO Colin Collins said the purchase of Critical Air, Inc., will help further the mission of Air Evac Lifeteam and the air ambulance industry by making air transport more accessible to more people, particularly those who live in rural communities.

"Critical Air will complement our operations and is a tremendous fit with our company's mission to save lives in rural America," Collins said. "Critical Air and Air Evac Lifeteam share the common belief that air ambulances should be placed in the areas of greatest need - in rural communities where response times may be long and critical life-saving care may be hours away. We're looking forward to working with the
Critical Air staff to make air medical transport available to even more people who need this valuable service."

Critical Air Medicine, Inc., headquartered in San Diego, has provided rotor-wing pre-hospital and inter-facility critical care transports and fixed-wing inter-facility transports since 1983. The company operates 13 bases throughout California and Texas and employs more than 100 full-time nurses, paramedics and pilots. The Critical Air rotor-wing bases acquired by Air Evac Lifeteam are located in Kerrville, LaGrange, San Marcos, Marble Falls, West, Brownwood, Stamford, Sweetwater, Mineral Wells and Wharton.

"Critical Air Medicine is a recognized leader in the air medical industry," Collins said. "We are committed to continuing their tradition of providing high quality critical care services to residents and hospitals in the Texas region."
Critical Air rotor-wing services will continue to operate as Critical Air, Inc.

Air Evac Lifeteam, headquartered in West Plains, Missouri, is a leading provider of air medical transport to rural communities in nine states throughout the central U.S. The company operates the world's third largest fleet of Bell 206 Long Rangers and has flown more than 70,000 people since its founding in 1985. With the addition of the 10 acquired bases, Air Evac Lifeteam now operates 54 mutually supporting air medical bases and employs more than 1,000 people.

From: Glenn Blum
Topic: 2753 Message: 2753

Good Evening,
I ran across this group while searching radioreference.com for some info.
I figured that I would join up.
Anyone out there scan TXU edacs systems? I am looking for a updated trunk group list.
I have been seeing some new groups showing up and wondering who they are.

Thanks,
Glenn Blum

From: Glenn Blum
Topic: 2754 Message: 2755

I listen into the Copperas Cove and Jarrell towers. I can☐t get a good enough recovery rate to scan Georgetown, Belton and Temple. Temple and Belton TXU sites are partially blocked by a hill side.
I see mostly Fort Hood, TXU and Care Flight but there are a few others that I can☐t find info on. I am more worried about the statistics of scanning then into listening. I am slowly writing a personal database of talk groups for the TXU system. Soon I can (hopefully) be able to trunk TXU Georgetown. I am going to make upgrades to my antennas.

Glenn, where are you monitoring TXU from? Also there is already an excellent data base of the TXU system on www.radioreference.com and more specifically
http://www.radioreference.com/modules.php?name=TRSDB&sid=1466
So I hope you aren't trying to "re-invent the wheel" I do hear some talkgroups that I are not listed. I'm surprised they are able to do it with just 3 channels and always wonder with the utility companies if they have some simplex frequencies. I know when Austin Energy was on UHF, they had several UHF simplex frequencies used for wire pulling, etc.

'Cops' filming Travis deputies for 2006 episodes
Crews will be crisscrossing county for eight weeks.
By Tony Plohetski
AMERICAN-STATESMAN STAFF
Thursday, May 12, 2005
If you get stopped by Travis County sheriff's deputies in the next eight weeks, you might see a camera crew not far behind. Beware: You could end up on national television.
Producers of the Fox television show "Cops" -- the one with the "Bad Boys" theme song -- are following deputies through June, shooting footage for their 18th season.
Austin's been popular with reality TV lately. Crews from MTV's "The Real World" recently wrapped up production here.
"This is a good way to get some exposure," Sheriff Greg Hamilton said. "It's a chance for us to show how professional we are when we deal with our citizens."
The show, one of the nation's first reality shows when it debuted in 1989, is making its first visit to Austin.
Initially, sheriff's department supervisors are choosing deputies for the crew to follow. But once producers meet other deputies, they will be allowed to select whom they want to film. Residents who end up on camera must sign waivers before their faces are shown.
Hamilton said the department is excited about the national exposure when the undetermined number of episodes air next year.
"It's going to be different having them around," Hamilton said, "just knowing that (deputies') every move could be exposed on national television."

2760. Careflight

Yahoo group: CenTexComm
Date: 2005-05-13 02:29:05 UTC
From: Glenn Blum
Topic: 2760 Message: 2760

Good Evening,
Today I had read an article online from MRT (Mobile Radio Technology Magazine)That Care Flight of Dallas is going to start using Teletouch's 450 MHz LTR trunk System in the Dallas Metroplex.
I guess that we will no longer see Care Flight on the TXU system.

2763. RE: [CenTexComm] TXU edacs system can be heard from North Austin

Yahoo group: CenTexComm
Date: 2005-05-13 02:41:10 UTC
From: Glenn Blum
Topic: 2754 Message: 2763

I am so sorry.
My location is north of Nolanville Texas off of FM. 439. I live in a good location so with a few antenna changes I am hoping to broaden my abilities to trunk systems further out. Of course with luck.
I mainly listen to TXU locally up here since Fort Hood uses TXU for their communications. The only other trunk system I listen to is Bell County.
TXU in Copperas Cove uses 6 frequencies. I noticed the same for Waco. I figured this is set up like this for the amount of service that TXU provides.

Subject: Re: [CenTexComm] TXU edacs system can be heard from North Austin

Glenn, where are you monitoring TXU from? Also there is already an excellent data base of the TXU system on www.radioreference.com and more specifically
http://www.radioreference.com/modules.php?name=TRSDB&sid=1466
So I hope you aren't trying to "re-invent the wheel" I do hear some talkgroups that I are not listed. I'm surprised they are able to do it with just 3 channels and always wonder with the utility companies if they have some simplex frequencies. I know when Austin Energy was on UHF, they had several UHF simplex frequencies used for wire pulling, etc.

2765. Not so sure about the 44 "APD Talk" channels.

Yahoo group: CenTexComm
Date: 2005-05-13 14:02:09 UTC
From: Robert
Topic: 2758 Message: 2765

I heard what sounded like narcotics on TG 1021 yesterday after work.

Yes, 1021 is definitely narcotics related and sometimes encrypted. I'm just not so sure about the 44 "APD Talk" channels. By the way, APD stands for Austin Police Department for those who did not know.

The talkgroups are listed at:

< http://www.radioreference.com/modules.php?name=TRSDB
<http://www.radioreference.com/modules.php?name=TRSDB&sid=2> &sid=2>

You may have to create an account if you don't already have one but it is free to do so.

2766. Incident over Washington D.C and what could happen in Austin

Yahoo group: CenTexComm
Date: 2005-05-13 16:38:50 UTC
From: Robert
Topic: 2766 Message: 2766

The incident with the small plane that entered a restricted airspace prompting evacuation of the US Capitol and the fact that the local police had no idea what was going on could definitely happen here. Currently, Capitol police using 460.125 (digitally scrambled) and Capitol DPS on 155.445 have no way to communicate with APD or even UT. They were also supposed to be on board and using the new Digital trunked system, but that has not yet happened. We still have many agencies on their own frequencies and no way to communicate with each other. As far as I know, there is no link or talkgroup that links intercity Law 1 154.95 or intercity Law 2 155.37 to the new Austin/Travis County system. All of the hospitals used to be able to coordinate with EMS agencies on 155.340, but that radio was removed from Brackenridge. Wasn't this new system supposed to change off of that?

I still hear agencies today calling Brackenridge Hospital on 155.34. Imagine what would happen in a mass causality and no way for outside agencies to talk to the hospital. They are 100% relying that cell phones will work. In a disaster, they may not or be jammed with calls.

Unfortunately most of the agencies are scared of their new digital radios. EMS responds to calls all the time on UT campus or at the Erwin Center and spends minutes trying to find the patient, when they could easily just switch over to UT's channel and ask where to go. The same thing with APD responding to UT incidents. Perhaps they will reconfigure the radios so that the talkgroups sound friendlier and people aren't afraid to communicate. No one seems to know what Interop means - they think it's someone else channel.

AFD and UT are scared to death that if they come up on the wrong channel, that they will be terminated.

But right now today, if a terrorist were to appear at the capitol, they have no radio contact and no way to coordinate with Austin Police. They have to call 911 just like everyone else. Just hope the (phone) system isn't jammed.

D.C. in Dark While Plane Was Intercepted
Police Chief Sees Problems In Lack of Communication

By Del Quentin Wilber and Spencer S. Hsu
Washington Post Staff Writers
Friday, May 13, 2005; A01

D.C. police officials had no idea that fighter jets and helicopters were being deployed over Washington to intercept an errant plane on Wednesday,

even though they had a sergeant in the nation's homeland security command center and the ability to monitor what was taking place at their own headquarters.

At the Homeland Security Operations Center, a command post built after the Sept. 11, 2001, terrorist attacks, the D.C. government was relying on a sergeant to keep track of any potential crisis. But it was not until the air scare was nearly over that he got word to police commanders.

At police headquarters, someone had disconnected a phone line that would have provided emergency communications from the Federal Aviation Administration, the officials said.

It was not until he heard fighter jets screaming past his office that D.C. Police Chief Charles H. Ramsey had an inkling of the events that had been consuming federal officials for a half-hour. And several more minutes elapsed before Ramsey received official notice and then alerted Mayor Anthony A. Williams (D).

"I'm not going to sit there and make believe that their notification system is flawless, because it's not," Ramsey said. "There are some issues there that need to be addressed. . . . This was all going on in a matter of minutes. We're only talking about seconds and minutes, but they count when you are talking about an aircraft."

Although police took responsibility for failing to monitor the FAA, D.C. and federal officials gave conflicting reports yesterday about what the sergeant knew at the homeland security center -- a place designed to speed communication among the many agencies that respond to terror threats. Ramsey insisted that the sergeant was not told by his federal counterparts what was happening, but federal officials took issue with that account.

The mayor yesterday sought a meeting with Homeland Security Secretary Michael Chertoff to review what D.C. officials called a dangerous delay that prevented the city from mobilizing emergency workers and taking steps to protect the public.

Spokesmen for President Bush and Chertoff yesterday praised the work of the Department of Homeland Security, the FAA, the Pentagon, the U.S. Capitol Police and other agencies that helped divert the plane out of the restricted area and to an airport in Frederick on Wednesday afternoon.

The pilots of the single-engine Cessna, Hayden "Jim" Sheaffer and Troy Martin, were released after officials determined they had become lost while traveling from Pennsylvania to North Carolina and posed no security threat. The FAA is considering sanctions against the men.

"It appears the system worked as it should have, since the appropriate and effective security measures were performed," said Brian Roehrkasse, a spokesman for the Homeland Security Department. "As we do after every single incident, we will review actions of all parties to determine areas where we can collectively improve."

On a day when federal agencies were keeping track, second by second, of a potential attack on the capital, however, the city was out of the loop.

About noon, with the plane approaching, the Capitol Police and the Secret Service were ordering evacuations of the Capitol, the White House and the Supreme Court, sending more than 35,000 people into the streets. And fighter jets were ready to fire missiles at the Cessna when it came within three miles of the White House. Officials said the incident was the closest the government has ever come to shooting down a civilian plane.

The episode rekindled concerns expressed after the Sept. 11 attacks on the World Trade Center and Pentagon, when D.C. officials were not consulted about evacuations and road closures. Since then, authorities have staged drills in hopes of improving coordination. But similar problems occurred in March when Pentagon officials did not consult local health authorities about distributing antibiotics to 900 defense workers during an anthrax scare.

Ramsey and top D.C. police officials said Sgt. Guy Poirier was stationed Wednesday at the Homeland Security Operations Center, along with members of other local, state and federal agencies. He was in a room with law enforcement officials who do not have high-security clearance. Federal authorities with such clearances, stationed in another room, reported monitoring the actions starting at 11:28 a.m. But Ramsey said that they did not share information with Poirier.

"It is compartmentalized," Ramsey said. "Everyone is not privy to all the information over there. . . . They are literally separated by doors."

Asked about federal coordination, White House spokesman Scott McClellan said the District has a liaison posted to the Department of Homeland Security's operations center round-the-clock.

"You have a number of personnel, that includes local officials, as well, or representatives of local organizations, like the D.C. Metropolitan Police Department," McClellan said, "and they're in constant communication" with other command centers.

But Ramsey said Poirier learned about the plane when a Capitol Police intelligence official called him for information about the airspace violation. Capitol Police had learned of the intrusion by monitoring radar and FAA communications at their own high-tech command post, police said.

The Capitol Police official also was having difficulty getting details, Ramsey said, and "thought he could get more information from calling our guy."

After the telephone call, Poirier scrambled to get information. He then called his boss, Cmdr. Cathy Lanier, on her cell phone at 12:05 p.m., police officials said. By then, the plane had flown within three miles of the White House, and authorities had started evacuations.

Lanier said that she quickly sent a page to alert her superiors. Ramsey, at his desk and unaware of the evacuations, received his page at 12:11 p.m. The page said that a plane had entered restricted airspace and that fighter jets

had intercepted it and turned it away from the city, Ramsey and Lanier said.

Ramsey said he then alerted the mayor.

The chief said he is looking into how the other communications breakdown occurred. Someone in the D.C. police command center -- a high-tech setting where officers monitor daily operations, emergencies and world events -- had lost the telephone connection that is supposed to be continuously tied to the FAA communication system. The network, connected to a speakerphone in the police command post, carries air traffic control communications when a major incident occurs anywhere in the country.

Ramsey said: "Had they been listening, we would have gotten an earlier heads-up that there was some activity in skies around Washington. At least we would have known something was going on."

Ramsey said officers in the command center also monitor two computer systems that display alerts about emergencies. The system, run by the Homeland Security Department, never issued an alert about the plane, he said.

"It didn't have anything" about the airplane, Ramsey said.

Staff writers Sara Kehaulani Goo, Sari Horwitz, Fredrick Kunkle, Susan Levine and Eric M. Weiss contributed to this report.

Subject: Incident over Washington D.C and what could happen in Austin"
Almost every jurisdiction suffers from the Not Invented Here" syndrome. In the old days of analog comms, everyone had to share a limited amount of bandwidth. With the new digital comms, many agencies can share channels and never be aware of others using the same freqs. As each agency reinvents the wheel, each one thinks of itself as the main cog in the greater machine and awaits all others to come to them for solutions.

Unfortunately, this is a classic case of too many chiefs and not enough Indians. Everyone wants to lead and no one is willing to follow. It took 9/11/01 to even think of many changes that are still being hashed out by the feds. The smaller, local agencies are not yet fully up to speed on the severity of the new style threat to al of us and insist on playing by 20th century rules.

Regards,
Glenn

STAR Flight celebrates EMS Week

Employees of the STAR Flight helicopter program will celebrate this year's EMS Week by hosting an open house at the county hangar facility at 7800 Old Manor Road on Wednesday.

From 5 to 8 p.m., the public is invited to meet the pilots, medics and flight nurses, Austin-Travis County EMS officials said. An aerial demonstration will take place at 7 p.m.

Last year, STAR Flight went on more than 1,600 missions, including medical, rescue, fire and law-safety assists. The STAR Flight helicopter offers air medical rescue to Travis County and nineteen surrounding counties.

There are two STAR Flight helicopters -- Eurocopter EC-135 aircraft -- and one is on duty at all times. The aircraft includes room for three crew members, a pilot, flight paramedic and flight nurse, as well as two patients.

The STAR Flight program was recently recognized by The Weather Channel during an event in Washington, D.C., for its late-night water rescue on Williamson County's Brushy Creek during the Nov. 15, 2001, flood.

Just wondering could it be possible that a group of us could get together somewhere to get to know each other better and share information about ourselves, our equipment, etc. face-to-face? I would like to see such a meeting if it could happen.

This would be beneficial to all of us, especially some of the neophytes out there that really don□t know that much about scanning, communications monitoring in general, ham radio, whatever.

Yahoo group: CenTexComm
Date: 2005-05-24 01:39:55 UTC
From: commscan
Topic: 2776 Message: 2778

Hi Warren & Group,

Since I live in Ft. Worth, I wouldn't count on making the meeting myself if one is set up in Central Texas :-). But I did want to say that in my area (and on the DFWScan Yahoo Group), we have periodic meetings and they've been enjoyable. I say "they", but actually, I've only been able to make the last one. However, list members have been making these meets for a few years and each one seems to get bigger from what people say (and the pictures taken). It is nice to put a face to someone you may e-mail or talk with sometimes. I enjoyed our last meet.

If the CenTexComm members decide to have a meet, I recommend someone be in charge of setting up reservations at a place most people agree on. It makes it a little more comfortable getting a huge (or small . depending on attendance) table where all can mingle. You don't need to actually get a list member's total commitment (or RSVP) to be there, but if someone is in charge of coordinating things, it makes the meet a lot more organized and relaxing. It's nicer to sit, talk, and eat at a BBQ restaurant or some place similar than a McDonalds where everyone is split up between multiple tables.

If y'all have the meet, I hope you all have a good one .

We all keep in close contact for the most part today and frequently still get together (not so much as a group now). It's great to have friends who know what you're talking about when you start in on the radio stuff. It sure beats the lack of interest most non radio related friends have for radio topics of discussion :-), Now all I need is to find

me one of these great radio friends that is a single female!

Well since I know Warren and he can say also, we used to have a local get together among some of the locals to talk up radio at a small restaurant it was quaint and enjoyable.
I agree what you have to say.

Subject: RE: [CenTexComm] Is A Group Meeting Possible?

Hi Warren & Group,

Since I live in Ft. Worth, I wouldn't count on making the meeting myself if
one is set up in Central Texas :-). But I did want to say that in my area
(and on the DFWScan Yahoo Group), we have periodic meetings and they've been
enjoyable. I say "they", but actually, I've only been able to make the last
one. However, list members have been making these meets for a few years and
each one seems to get bigger from what people say (and the pictures taken).
It is nice to put a face to someone you may e-mail or talk with sometimes.
I enjoyed our last meet.

If the CenTexComm members decide to have a meet, I recommend someone be in
charge of setting up reservations at a place most people agree on. It makes
it a little more comfortable getting a huge (or small . depending on attendance) table where all can mingle. You don't need to actually get

a
list member's total commitment (or RSVP) to be there, but if someone is
in
charge of coordinating things, it makes the meet a lot more organized
and
relaxing. It's nicer to sit, talk, and eat at a BBQ restaurant or some
place similar than a McDonalds where everyone is split up between
multiple
tables.

If y'all have the meet, I hope you all have a good one .

Subject: [CenTexComm] Is A Group Meeting Possible?

Just wondering.could it be possible that a group of us could get
together
somewhere to get to know each other better and share information about
ourselves, our equipment, etc. face-to-face? I would like to see such a
meeting if it could happen.

This would be beneficial to all of us, especially some of the neophytes
out
there that really don't know that much about scanning, communications
monitoring in general, ham radio, whatever.

You bet! I was just about to post the same question. I don't mean to step on any toes with the following, it's just some ideas I had written up and is certainly changeable:

Would next Tuesday work? That is, Tues., May 31, say 6-8 pm at Central Market (4001 North Lamar). Don't worry about getting there late or leaving early, just come out! Look for scanners and maybe a sign. Maybe we could make it a regular occasion.
http://www.centralmarket.com/cm/cmLocation.jsp#Nlamar

Bring handhelds and whatever's on your mind. Maybe we can see some mobile setups too. As for me, the Pro-83 caught my eye, with its signal stalker feature and sale price ($80 vs 120, thru Wed May 25).
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-501
I've read reviews online, but nothing compares to seeing something in person. Still undecided. I'd also be interested in comparisons to the Signal Stalker II (Pro-97) and "close call" (BC92XLT and BC246T). If you have such a scanner for sale cheaper than the RS sale price, let me know. Do any CQPSK-compatible scanners have a "signal stalker" or "close call" feature? As far as I see, only the upcoming BCD396T (fall 2005).

If the time is bad, then what's good? Say, Mon, Tues, or Thurs evenings, or the weekend? The UT campus area is also good for me.

2786. Meetings and/or Get-Togethers

Yahoo group: CenTexComm
Date: 2005-05-24 18:12:53 UTC
From: Warren Rowe
Topic: 2786 Message: 2786

It looks to me like it would be easier for those in the Austin area to meet themselves, and those in the Temple-Waco-Killeen area to get together. It would be extremely difficult for me to attend a regular Austin-area group get-together, and I'm sure the reverse would also be true.

Maybe if the local areas have their own meetings, and then everyone get together maybe quarterly or some other regularly scheduled time?

Topics would certainly be anything related to scanning, shortwave radio, ham radio, etc. In one way or another, all of them can be and are related. It would be up to the individuals themselves to discuss whatever they wanted to.

Any further thoughts on this?

Warren / KM5EW

2787. Group meeting for scanner listeners.

Yahoo group: CenTexComm
Date: 2005-05-24 19:03:57 UTC
From: Robert
Topic: 2776 Message: 2787

If anyone wants to get into the HAM/ARES thing: There is already a very strong group in Austin.

www.austinhams.org <http://www.austinhamradio.org/>

< http://groups.yahoo.com/group/traviscountyares/> is a yahoo group for Travis Co ARES

If you guys are in Temple, there is a scanning group there:

http://groups.yahoo.com/group/bellandcoryellco/

I think most of the group here are into scanners and I certainly wouldn't mind another try at a get-together.

I encourage everyone to attend and would love to see a strong turnout. Last time I was one of only 3 that showed up.

I was also wondering if people would be interested in trying an online get together in the form of CHAT room.

The CenTexComm has an option on it for Chat and that might be something to try. We could arrange once a week for an online chat get together to see if anyone has any questions or perhaps promote more open discussion. I honestly don't know from the almost 200 members subscribed to this list.. Who all is in Austin/Travis County? And who all actively monitors Austin/Travis County and how many people have the new Digital radios, etc etc.

2791. RE: [CenTexComm] Re: Is A Group Meeting Possible?

Yahoo group: CenTexComm
Date: 2005-05-25 11:32:32 UTC
From: Glenn Blum
Topic: 2776 Message: 2791

Are you talking about the Hill Top in Harker Heights?
We never had a problem there but I have not been there is years.

Glenn Blum

Hill Top....NOT!!!!!!!!
  Ex-wife got food poisoning there the day before Thanksgiving and was
in the hospital until the following Monday. It was traced to mushrooms
but that would be enough to keep me out. Anyway, my 2 cents.

                                                Steve

2793. RE: [CenTexComm] Group meeting for scanner listeners.

Yahoo group: CenTexComm
Date: 2005-05-25 14:57:12 UTC
From: KM5EW
Topic: 2776 Message: 2793

As for me, I already belong to the bellandcoryellco Yahoo Group, as well as some other members here with this group.

Warren / KM5EW

-----Original Message-----
From: CenTexComm@yahoogroups.com [mailto:CenTexComm@yahoogroups.com]On Behalf Of Robert
Sent: Tuesday, May 24, 2005 2:04 PM
To: CenTexComm@yahoogroups.com
Subject: [CenTexComm] Group meeting for scanner listeners.

If anyone wants to get into the HAM/ARES thing: There is already a very strong group in Austin.

www.austinhams.org < http://www.austinhamradio.org/>

< http://groups.yahoo.com/group/traviscountyares/> is a yahoo group for Travis Co ARES

If you guys are in Temple, there is a scanning group there:

http://groups.yahoo.com/group/bellandcoryellco/

I think most of the group here are into scanners and I certainly wouldn't mind another try at a get-together.

I encourage everyone to attend and would love to see a strong turnout. Last time I was one of only 3 that showed up.

I was also wondering if people would be interested in trying an online get together in the form of CHAT room.

The CenTexComm has an option on it for Chat and that might be something to try. We could arrange once a week for an online chat get together to see if anyone has any questions or perhaps promote more open discussion. I honestly don't know from the almost 200 members subscribed to this list.. Who all is in Austin/Travis County? And who all actively monitors Austin/Travis County and how many people have the new Digital radios, etc etc.

http://groups.yahoo.com/group/CenTexComm/

http://groups.yahoo.com/group/CenTexComm/chat

2794. RE: [CenTexComm] Re: Is A Group Meeting Possible?

Yahoo group: CenTexComm
Date: 2005-05-25 14:59:58 UTC
From: KM5EW
Topic: 2776 Message: 2794

That was the place. I think it's still open, isn't it?

Warren / KM5EW

That's right, Glen; we did have a get together in Harker Heights
among the local members of the old Bell County ARES group. I can't
remember the name of the restaurant, but it was a quiet place and the
food was decent. Maybe some place like that would work.

Steve,
How close are you to Nolanville/Harker Hights?

Are you talking about the Hill Top in Harker Heights?
We never had a problem there but I have not been there is years.

Hill Top....NOT!!!!!!!!
Ex-wife got food poisoning there the day before Thanksgiving and was
in the hospital until the following Monday. It was traced to mushrooms
but that would be enough to keep me out. Anyway, my 2 cents.

Steve

Griffin, Jose, Robert, Rick, and I all got together at Central Market this evening. It was a lot of fun finally putting faces with names. We all agreed we need to do this more often, so I'm thinking in a couple of months. Just some ideas...

* Meet in, say, Georgetown to the benefit of our Bell County members.
* Maybe we can incorporate a visit to a fire station, dispatch center, etc.

Central Market always works for me. It's central... it's a market, er, I mean, it's a centrally located place where we can meet and hog a table for hours without getting dirty looks from the staff and being outside no one cares about about our scanners.

I took a couple of pictures. I have no idea what I was doing with my hand in that second shot. Sorry Rick, you showed up moments after I put the camera away.

Thanks to John/Jose/Griffin/Robert for coming. There's a playground right behind the deck - I'll bet Jose's young son enjoyed that. Robert and Griffin each brought a guest along. Made for a nice diversion on a Tuesday evening.

So ... anyone here playing with Uni-Trunker?

2804. RE: [CenTexComm] CITY, MEDIA REACH AGREEMENT ABOUT POLICE SCANNERS

Yahoo group: CenTexComm
Date: 2005-06-08 20:56:31 UTC
From: KM5EW
Topic: 2803 Message: 2804

I'm not sure that this agreement is a good idea.for it still leaves out the general public, who has every right to know what is going on in their city. It's a bad precedent.

I can see the point that the city is trying to make, BUT, encryption like this allows law enforcement and other local agencies to hide behind a large curtain if something terrible should happen that is the fault of those agencies. Public scrutiny would be much less enhanced by this action, maybe be eliminated entirely. Then what happens next, especially if it happens again?

Also, the media can be very biased as well. There is no guarantee that events that occur in a local area will not be properly reported. Heck, it doesn't happen even now with the abilities to monitor these communications as they are right now.

Finally, the city of Wichita Falls now can claim to be a "transparent government"? Drop the encryption codes, and that claim might become a bit more valid.

Wichita Falls government is depriving a basic privilege in the name of public safety and the "desire to become a transparent government." Personally, I do believe that's B.S.

Warren Rowe / KM5EW
Temple, Texas

Thanks,
I can't trunk LTR. I am running TRUNKPCR on my Icom PCR1000 and this
program right now only supports Motorola and EDACS.

Thanks a bunch!

Subject: [CenTexComm] VHF/UHF trunked systems

Good Evening,
Has anyone seen any trunked systems on VHF/UHF within the central Texas
area?
I know of one in the 400 MHz area out of Temple VA hospital

Thanks,

Glenn Blum

2809. PRO-83 Back on sale now $80

Yahoo group: CenTexComm
Date: 2005-06-09 17:29:20 UTC
From: Robert
Topic: 2809 Message: 2809

Although you would need a Digital Trunked scanner to hear the Austin/Travis Co system.

People are always asking what is a good little scanner for just general use. This scanner Does NOT do trunking so be aware of that. But It has the incredible Signal Stalker feature that is basically a frequency counter that let's you hear what is being said (not digital transmissions). So you can drive down the road or be at an event and the nearest analog transmitter to you .. If they are close enough... you will hear what's being said

The Pro-83 at Radio Shack is so small and uses only 2 AA batteries and has 200 channels you can scan at one time. I totally recommend it and it's on sale again $80 for Fathers Day. (Regular price is $120)

<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG
<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-501> &product%5Fid=20-501>

Compact, lightweight, and loaded with the frequencies you need!
This scanner is smaller than conventional handhelds to fit nicely in your palm and has an orange backlit display for easy use at night. Store up to 200 of your favorite frequencies into memory. Features the Signal Stalker-instantly "lock on" to frequencies being broadcast in your area-no programming necessary!

Hey Robert, what do you think about the PRO-2051
1000-Channel Triple-Trunking Desktop Scanner? Does it
pick up APD?

Hi Robert!

This is a great radio to use as a signal source for programs like
Trunker (after adding a discriminator tap). No need to tie-up your more
expensive trunk-tracking capable radio.

Hi Rick! Good to see you at Central Market.

I also find the Pro-83 is a good companion to my trunking scanner. The keystrokes are awkward and I miss text tags, but it has its place. With two scanners, no longer must I choose between scanning and searching. :) It's also easier to check related frequencies, such as repeater inputs.

So what do you do with Trunker? I've read that it lets you trunk-track using two non-trunking scanners. What does it do that a trunk-tracking scanner doesn't do? System ID's? Logging, analysis? What cable / interface do you use?

All of the above.

I periodically hunt for control channels - looking for new system ids. Not often, but every once in a while I get a surprise. If you just want to listen, get a trunk-tracking radio. If you want to find new talkgroups or verify frequencies - a program like trunker is the way to go. The ability to correlate radio ids with talkgroups also aids in indentifying talkgroups.

As for cable and interface - we now have a lot more options available than just a few years ago. All of the choices I'm about to cover are free programs (usually with a GPL or similar license). I'll start out with the "old school" software. First, there's the trunker "classic" family which includes Trunker and ETrunk.

1. Trunker monitors a Motorola trunked radio system.
2. ETrunk allows monitoring EDACS systems.

Both programs run on DOS and require a data slicer (or "hamcomm" interface) that must attach to a serial port. The input to the dats slicer must be baseband audio - this can usually be had from a tap of the narrow-FM discriminator (before audio filtering distorts the original signal). Some folks are able to get these programs running on Windows 9X or even XP with some effort. Two recent additions to the trunker family are:

3. LTTrunk and
4. LTRTrunk

Both allow monitoring LTR/Passport/Multinet systems. Both programs prefer to run on DOS and require a data slicer. In this case the slicer must be modified to include a low-pass filter to remove the voice from the low-speed signalling data. These programs will also control a second radio.

The next set of programs work on Windows - most use the computer's sound input instead of a data slicer for signal input. You still need baseband audio. A few radios come with a factory installed discriminator tap - the WinRadio 1550 and the PCR1000 for example. For monitoring an MPT1327 system (don't worry, none in this area) you can use:

5. "Tronkito" or one of it's derivatives like
6. "Tronquito".

There are versions for Linux and Windows out there. A few years ago ... I made a program called T4Win or Trunker for Windows available.

7. T4Win - beta

This is a native Windows program for monitoring EDACS and Motorola systems. This is a beta program that never reached a mature 1.0 release. Amazingly (to me anyways) a lot of folks still prefer the "old-school" DOS window format of the original trunker family. In response to this, the following programs appeared ...

8. TrunkerXP - a cross-platform version of Trunker that requires a data slicer but works on Windows 2K and XP.
9. MTrunker32 - a port of Trunker to windows - modified to accept a signal from an audio source instead of a data slicer.

For a while, things looked bleak for folks in places like Austin wanting to have the same monitoring capability for APCO Project 25 systems as we've had for Motorola and EDACS systems. Finally, new Uniden and GRE models arrived with P25 capability. After the PRO-96 was introduced, the GRE team published the specs that allows this radio to act as a receive-only radio modem for the P25 trunking control channel. A couple of programs quickly appeared to take advantage of this ...

10. pro96dmp ... a very crude "dump" of the control channel data in real-time.
11. pro96com - a real Windows GUI program for displaying this trunked radio system information.

Both programs require a PRO-96 and the PRO-96 programming cable (no need to disassemble the radio). If you have a PRO-96 and want to get your feet wet without worrying about scorching a circuit board - this is the way to go.

Nearly all of these programs do pretty much the same thing - they capture control channel data which is then used to build a model of the system being monitored - talkgroups, radio ids, channels, and sites (or towers). From a programming perspective, the code (and effort) to support this could be leveraged to handle multiple protocols with little effort. To keep the "old-school" trunker fans happy, I introduced a unified replacement for many of the trunker variants floating around out there (there's even an Australian version of trunker called AusTrunk - I'm not kidding) that retains the text console "look and feel" (well, sort of) of Trunker and E-Trunk. This new program is called "Universal Trunker" or UniTrunker for short. The ability to decode an APCO P25 signal (without the aid of a PRO-96) was added. Experimental MPT1327 support is also included (but for central Texas, hey, who cares?).

The same multi-protocol decoding framework for UniTrunker will eventually be put into the new T4Win so folks wanting a real Windows GUI

interface can do so. If demand warrants it, there may even be a "UniTrunker Lite" that runs on DOS (but no P25 decoding) for those truly die-hard old-schoolers that must have something for DOS.

If you're interested in downloading and playing with one of these programs ... I suggest signing up on the trunker yahoo! groups mailing list or visiting the Radio Reference website - check the Wiki and the forums for info. There is also a pro96com yahoo! groups mailing list where you can ask questions and download the latest version of that program.

Regards,
Rick

2814. STAR Flight celebrates 20 years

STAR Flight celebrates 20 years

The Austin-Travis County STAR Flight program will celebrate its 20th anniversary Saturday.

The program was started in May 1985. It provides regional medical transportation, rescue services and assistance to firefighters and law enforcement.

Since its inception, the program has logged 13,707 flight hours, flown 1,295,524 miles, transported 18,816 patients and consumed 1,181,328 gallons of fuel, according to the Austin-Travis County EMS Department. The anniversary celebration will take place at 11 a.m. in the council chambers at Austin City Hall, 301 W. Second St. The public is invited.

Police traffic enforcement

Police will be watching for traffic-law violations in these areas today:

Morning:

1700 block Rosewood Avenue; 1500 to 1800 blocks of West Sixth Street

Afternoon:

7200 to 9000 blocks of U.S. 290 East; 4000 block of Duval Road

2815. Pro-2051 gets Analog (not digital)

Yahoo group: CenTexComm
Date: 2005-06-10 14:30:40 UTC
From: Robert
Topic: 2809 Message: 2815

Regarding the Pro-2051 I didn't think that got digital stuff. It looks cool but I don't think it will decode the Austin/Travis County System. According to the yahoo group is does not:

http://groups.yahoo.com/group/PRO-2051/

The first and largest discussion group dedicated to the Radio Shack PRO-2051 Base/Mobile radio scanner made by Uniden Corporation. This unit features 1000 memory channels and Radio Shack's new Signal Stalker (Uniden name Close Call) technology that captures signals that are transmitted in close proximity to your location. This unit also receives Trunked (ANALOG ONLY) Motorola, M/A-Com EDACS, and LTR systems. Type acceptance was received under AMWUB331 on 11/08/04 and is carried under Radio Shack SKU #20-426. It seems this is a base/mobile version of the PRO-97 portable that recently received type acceptance.

Sure can.

The radio reference or "RR" website (formerly trunkedradio.net) includes
a frequency database, forums, and a wiki.

http://www.radioreference.com/

Lindsay recently opened up the database - you don't have to sign up to
browse - only if you want to post messages in the forum.

Here's the link to the Trunker mailing list. It is well moderated - lots
of knowledgeable folks.

http://groups.yahoo.com/group/trunker/

Check the "files" section for downloads.

Topic: 2819 Message: 2819

Sheriff's office seeks more volunteers
By Jimmie Collins 232-2222

Not every deputy from the Travis County Sheriff's Office is paid by taxpayers' money. Some aren't paid at all.

Since 1974, the sheriff's department has used a group of volunteers called the Reserve Unit to help carry out their duties. But no average person could tell a reserve deputy from a full-time deputy; they have the same uniform, training and power.

"Whatever the sheriff needs, the Reserve Unit provides - extra man- or woman-power," said Deputy Sheriff Bob Brown.

The only difference between full-time deputies and reserve deputies is that they're not getting paid.

Currently the Reserve Unit is comprised of 34 Travis County men and women, but the department is trying to expand its numbers to 50 for next year's training group.

"They still have to get into the police academy, they have to be able to do CPR and they still have to be able to do everything a regular deputy does," said Reserve Capt. Matt Baker.

According to Baker, some of the people involved in the strictly volunteer program are former officers or even former deputies.

"Some of them may have retired already but just happen to enjoy police work," Baker said. "Some of them may have found a higher paying job but decided they still wanted to help out."

According to Brown, reserve deputies are used to patrol the lakes, rivers and streets of the county, as well as help with work in prison facilities.

This year, the Reserve Unit has been used for security after the fire at the Oasis restaurant, and they will be assisting officers with transporting prisoners to other facilities in upcoming months, Baker said.

The sheriff's office will be holding a meeting for those interested in the Reserve Unit Tuesday at 7 p.m. at Hill's Cafe on South Congress Avenue.

Austin police get donated helicopter from Army
OH-58 chopper will be used for highway patrols
By Tony Plohetski

AMERICAN-STATESMAN STAFF

Saturday, June 25, 2005

The Austin Police Department's newest crime-fighting tool, a U.S. Army OH-58 helicopter, arrived at its new home Friday afternoon after a several-hour flight from Fort Rucker, Ala.

Beginning in a couple of months, the reconnaissance chopper will be used to patrol Interstate 35 and other major highways, help find fugitives and provide aerial views of crowds at large events.

The helicopter came with an added bonus: It was free.

More than three years after the city bought its first police helicopter, department officials accepted the chopper from the Army, which is replacing its fleet with new helicopters.

The Army is awarding about 150 of the used helicopters to law enforcement agencies across the United States.

"They are very serviceable, very fit for police work," said Cmdr. David Carter, who supervises the department's air enforcement unit.

Officers assigned to the aviation unit have long said that they would like a second helicopter, but it hasn't been a priority in the department's budget requests.

The OH-58 is a single-engine, two-bladed helicopter with state-of-the-art navigation and vision equipment. The donated craft has about 6,000 flying hours.

The helicopter, to be called Air 2, will team up with the department's Eurocopter EC 120B chopper, which the department bought for $1.6 million in late 2001 and calls Air 1. It has about 3,000 flying hours on it.

Carter said the OH-58 will allow officers to split flying time between the two aircraft to put less wear on each. It also will give the department a backup if the other helicopter is being serviced or is performing another mission.

Carter said operating costs will be about the same for both helicopters: about $225 per flight-hour for gas, oil and maintenance.

He said the department will spend the next few weeks adding police radios and other equipment to the aircraft.

"We want to ensure that the aircraft is completely safe," he said. "We don't have any concerns about that, but we want to do our own inspection."

2821. Elgin PD asked for help last night and then hung up the phone

Yahoo group: CenTexComm
Date: 2005-06-26 15:44:27 UTC
From: Robert Barker
Topic: 2821 Message: 2821

This weekend is Elgin's Western Days Festival. Last night was interesting, when Travis Co SO got a phone call from Elgin PD about 1:00 am this morning was that they were requesting assistance and that "shots were being fired at officers, windows were being broken out and that 2 were already enroute to Brack". I immediately started listening to the Bastrop Co Trunked, which Elgin PD uses, and didn't hear as much urgency from Bastrop Co SO so I realized it was not as bad as TCSO made it seem. Of course the two agencies could not talk to each other by radio (or didn't realize they could) and when TCSO dispatchers kept trying to call Elgin back to see where they were needed or what they needed - Elgin was too busy to talk to them. Too bad TCSO is not set up to monitor them. All Elgin would have had to do was patch their channel to one of the intercity channels and tell all the responding agencies that are not on the Bastrop system to monitor intercity. It would seem that the communication people at CTECC should at least be able to "patch" any talkgroup to any talkgroup, including neighboring agencies.

TCSO finally told their units they could "slow it down" after most of them already got there. Elgin has had lots of problems in the past with large group gatherings. Nothing wrong with calling for help when you need it but I just wondered why TCSO was sending everything they had and Bastrop SO was just running normal calls. It was an another example of bad communication. Fortunately everything got under control and it turned out that the 2 taken to Brack were not Elgin officers as TCSO had originally assumed.
\--------------\
I saw film crew riding with TCSO last night on a traffic stop at Braker and I35. I assume this was the TV show COPS which is riding with TCSO officers. I wonder if they made it to Elgin? It should be an interesting program if they get enough footage from Travis Co to air it on TV.

Not sure what to think about APD getting a 2nd helicopter. I'm scared they will do like Air 1 and just fly in circles around the N Sub like Air 1 does now. I hope they have enough sense to keep a distance from each other. Sounds like we need to start listening out for and APD Air to Air channel

There was a question posted in the www.radioreference.com forms asking if Williamson County has specific "Scene" channels reserved for each agency. I've noticed that RRFD primarily uses EMS Scene 2 when dispatched to medical assists. Do the different FDs in the county have "primary/preferred" EMS Scene TGs that they use? For example, could I lock out EMS Scene 1 because that TG is reserved for use by Georgetown FD or WC Scene 8 because it's used by Cedar Park?

From: Robert
Topic: 2822 Message: 2822

For Tonights Fireworks over Town Lake (in Zilker Park), expect to hear some Interops communications:

Interop B - AFD
Interop E - EMS
Interop G - APD linked to APD Events 1
Interop F - Parks Police
Interop H - Command Post

Sounds like a good idea. Have a Safe 4th.
There were tons of grass fires last night and I expect tonight to be more of the same.

I-Call is to EDACS as Private Call is to Motorola. Esentially, it is when two units have a direct connection through the trunk system that only they can participate it, theoretically making it "private". Of course, you throw that out the window when you bring scanners into the picture.

I-Call is to EDACS as Private Call is to Motorola. Esentially, it is when two units have a direct connection through the trunk system that only they can participate it, theoretically making it "private". Of course, you throw that out the window when you bring scanners into the picture.

2831. New Airport in the Works

Yahoo group: CenTexComm
Date: 2005-07-16 07:20:50 UTC
From: Rick Parrish
Topic: 2831 Message: 2831

*[taken from the AOPA newsletter]

~ My ePilot ? In Your Area ~*
MAYOR WORKS TO MAKE CENTRAL TEXAS AIRPORT A REALITY
Mayor John Cowman of Leander, Texas, is determined to see that a new central Texas airport is built just north of his city. Last week, working with AOPA Regional Representative Shelly Lesikar and AOPA Vice President of Airports Bill Dunn, Cowman orchestrated a meeting between AOPA, Williamson County officials, the Texas Department of Transportation, several local pilots, and the Central Texas Mobility Authority to discuss options. Staff members from the offices of Congressman John Carter and state Rep. Mike Krusee also participated. The FAA has made it clear that it is committed to seeing this desperately needed general aviation airport constructed. Since the state was directed by the legislature in 2001 to build the new airport, one of the primary impediments has been a restriction on using state funds to provide the local matching funds required by the FAA. This legislative session AOPA worked with Cowman and Krusee to remove that restriction. At last week's meeting, airport sponsorship and ownership options were discussed. Finding a public sponsor other than the state would remove the funding restrictions and several other restrictions, including the need for local government approval, allowing the project to more forward more quickly.

I believe FD still simulcasts on 154.130 MHz, but I don't think PD normally simulcasts on 155.190 MHz.
They might when they need to coordinate with other agencies.

Myles

2833. digital on 154.800

Yahoo group: CenTexComm
Date: 2005-07-17 02:57:46 UTC
From: sly.debbie
Topic: 2830 Message: 2833

Can anyone east of Austin hear the p25 comms on 154.800? It is some sheriff's department but they don't talk very much and I can only hear them on a good outside antenna (and not always at that) over hear in Bryan. Anyway just trying to figure out who it is.
I looked in the fcc database but looks like a couple possibilities but they look too far away from me to even be able to pick up.

You are right but its not them. They still operate on that freq but its analog w/pl of 141.3
My work takes me to surrounding counties at times and I heard it fairly strong in city of Caldwell (Burleson co) but its not them either. I'm guessing its to the west of there like Lee, Milam, Bastrop county.
Yea I wanted to know if anyone east of Austin could hear them too.
They don't talk much at all so whoever it is, it is a small agency with not much to do and I haven't heard them id themselves.
I'll figure it out, it will just take some more listening...

I'm curious too how sensitive the P25 decoding is when you do get off frequency. Can you still decode a signal when you are slightly off frequency or is it pretty critical to be right on frequency?

I would imagine that with the current line of P25 scanners out there that require a pretty decent signal to even decode correctly, that being off frequency would totally kill any attempt at decoding audio.

2840. Re: [CenTexComm] digital on 154.800

Yahoo group: CenTexComm
Date: 2005-07-19 02:13:15 UTC
From: debbie.sly@verizon.net
Topic: 2830 Message: 2840

Well after doing a bit of listening last night I believe I have narrowed down who is on 154.800 using digital radios. Had a unit to check out at a convenience store in "Hearne" which is Robertson county. Fcc search reveals that Franklin is licensed to that freq, however that freq in the past has been pretty much dead and very short range. Thats why I ruled it out initially. The officer refers to the dipatcher as "county" but since Franklin is the county seat this could be the case. Looks like the one horse town of Franklin has some fancy equipment now!

BTW-Robertson county sheriff operates on 155.580 pl 141.3 and Hearne operates on 156.240 pl 141.3 and both are still there.
Any case it'll take some more listening to confirm for sure but looks like that who it is.
(ps-I'm not sure why I heard it better in Caldwell like I mentioned earlier as compared to here in Bryan.)

2842. DPS 159.210 Repeater on P-25 digital since Nov 2004

Yahoo group: CenTexComm
Date: 2005-07-21 19:11:20 UTC
From: Robert
Topic: 2841 Message: 2842

Yes DPS has been playing with digital on 159.210 since Nov 2004 - see this prior message. It actually should be 159.2175

http://groups.yahoo.com/group/CenTexComm/message/2568

From: "Robert" <trebor1159@...>
Date: Wed Nov 10, 2004 12:06 am
Subject: DPS tonight simulcasting 155.46 onto 159.2175 digital

This is the first time that I have heard DPS on 155.46 simulcasting onto 159.2175 digital.. you know it's

digital because a normal scanner is just
getting buzzing on 159.2175 or anything close to that such as 159.215 or 159.225. But I'm hearing him just fine with my digital scanner.

2843. Re: [CenTexComm] digital on 154.800

Yahoo group: CenTexComm
Date: 2005-07-21 23:50:44 UTC
From: sly.debbie
Topic: 2830 Message: 2843

I've done some more listening to 154.800 and heard a unit do a traffic stop on US190 and OSR. Which is on the Brazos Co and Robertson county line. No where near Franklin. So for now I am retracting my thoughts earlier about the digital comms belonging to Franklin Pd. It does have something to do with Robertson county though. My next thought is maybe the county constables have gone out on their own with these new radios. More listening is required.....Unfortunately Grimes county is on the same freq, they got a good signal here in Brazos co and they talk a great deal more, a 10-1 ratio. Plus no current digital scanner has a "digital only" mode so I have to listen to both.
Yea John if you're coming this way up 79, you get to pass thru Hearne and Franklin! hee hee

2844. Introduction, and question about antennas

Yahoo group: CenTexComm
Date: 2005-07-24 03:40:14 UTC
From: intelhawk
Topic: 2844 Message: 2844

Hi All,

I'm a newbie, and was excited to find this group!

I own an Icom IC-R10. I am happy with it, and seems to be a much better replacement for the old IC-R1 that I lost (maybe not a bad thing, I disliked the scanner).

Considering buying an antenna to mount on the top of the house, using a mast (I have a 2 storey house). I keep hearing good things about discones. Anyone have any thoughts? I live in North Austin (MOPAC & PARMER area) and would like to be able to more clearly here aviation at ABIA, and potentially Georgeotwn. Will a discone help me out with this?

Cheers,
Phil

What are you currently using for an antenna?
Yea discones are a good bang-for-the-buck antenna. They don't offer any signal gain and are omni-directional but they are relatively flat (unity gain across all bands). They don't perform very well below 100mhz though, even the ones with the so called low band element on top (but better than nothing on top). Like always run high quality coax and keep the length as short as possible. Be sure to install lightning arrestors, as discones are popular with lightning (so I've heard...hee hee)

PS -If your wanting to just mainly listen on one frequency band then a specialized antenna for that band will work better or even a directional antenna if the signals are primarily in one direction.

From: intelhawk
Topic: 2844 Message: 2846

Thanks for the response! I didn't know that discones loved lightning so much - point taken!

I currently only use the supplied rubber duck antenna with the scanner. But recently, I purchased an el cheapo telescopic whip from Fry's Electronics (I live WAY too close that place!), and the difference has been startling. I can pick up local ham activity much easier on 2 meter, and have also been messing around with shortwave broadcasts (can now pick up a shipping beacon in the Caribbean and pulled in Radio Australia a few nights ago).

My real interests are aviation radio comms, so I'm looking for the best solution to be able to listen to the activities around ABIA without having to drive down to the car park next to runway 35L! I can listen to some of the flights coming in on approach, but want more.

Cheers,
Phil

Topic: 2844 Message: 2847

I live about 10 miles as the crow flies from the ABIA tower. All I can hear on the VHF side is aircraft already in the air. Can't hear the tower at all. Even with a radio shack discone on the roof still no tower comms on the vhf side. On the other hand, if you tune to the UHF tower freqs you can hear the tower as they broadcast on both freqs at the same time. This has been my workaround for now until I get a better antenna.

Hmm, that sounds disappointing. I guess I'll do some more research. I hear the "scantenna" is fairly decent...

I was messing with it tonight while grilling in the back yard. I could pick up Continental comms betwene the aircraft and the dispatcher based at ABIA, as well as some clearance comms with the small telescopic whip I bought.

2853. Re: digital on 154.800

Yahoo group: CenTexComm
Date: 2005-08-01 19:34:05 UTC
From: navscanmaster
Topic: 2830 Message: 2853

To end this debate, the Digital Comms on 154.8000 MHZ is the Grimes County Sheriff's Office. It now doubles as the Navasota Police Dept's Dispatch with 155.7900 MHZ as the secondary. Most of the county and city cars now have ASTRO radios. CH 1 as programmed in these radios is 154.8000 Analog with 141.3 PL. CH 2 is 154.8000 in P25 mode. They are tagged as GRIMES and GRIMES D respectively. One of the investigators that is a radio programmer said that the S.O. tower at Anderson has both P25 and Analog transmit capability. Plus, you might notice time to time that the Unit maybe on CH 2 talking to dispatch. Dispatch does not transmit in P25, but can hear it. Primarily, it is the county deputies talking back and forth. No, the county is not licensed for digital emissions, but the radios are programmed with that digital channel. My father at Navasota PD had carried an XTS-5000 handheld, but didn't like it because the Channel line-up had always had CH 3 as 154.9500 MHZ, now car-car is CH 4. Ch 3 in the new lineup is the old Navasota PD Primary 155.7900 MHZ

From: DSK
Topic: 2830 Message: 2854

Thanks for the info navscanmaster, while that is some news I don't think that is the whole picture. I live in Brazos county, right in between Grimes and Robertson. I can hear both. While Grimes may have some p25 equip, what I am hearing IS Robertson county, that is some agent related to the sheriff.
If this is solely the case then why are Grimes county units pulling people over and running various traffic in Robertson county??? Unit #'s I hear are 25xx type. Also when I get closer to Grimes county line I can no longer (very weak) hear the p25 on 154.800 and stronger on the northern end towards Robertson co? The p25 I hear is a repeater, its always a unit talking to "county". I've never heard (yet) two units talking to one another.
I have also heard doubling of p25 and analog. The current Grimes county analog 154.800 is always much stronger than the p25 on 154.800 and covers them up (from my home listening post)

Question for you--is Ch.2 you spoke of (154.800 p25) I take it that is a repeater talk around (simplex)? If it is simplex then it maybe tough for me to hear them in p25 mode. I have yet to hear any p25 to come out of the Anderson tower.

If this is the case then both Robertson and Grimes co are on the same freq and running p25.
Sly

From: navscanmaster
Topic: 2830 Message: 2855

I did notice a while back that 154.800 was licensed in Robertson County, and thought it was odd to have two transmitters so close to each other on the same frequency. When I was working in the Jail, which shares control room quarters with Dispatch in Grimes County, we used to catch skip from Goliad County often. Even had a dispatcher run a 28 for a Constable in Goliad County, who are also 1400 series, gave the return, and then realized she didn't have that number on duty. But we never caught any skip from Robertson County. I don't know if they catch it from us. But I think that it is kinda ironic that the first two digital VHF agencies in the area share the same frequency. Grimes County plans in the near future to license a new narrowband pair to go with a full-time digital repeater and a full-time analog repeater. Problem is getting the remaining grants to build-out. However, I might add to whoever may be interested, though off topic, Navasota Fire Department is within a month from bringing their new repeater online. I don't have a clue whether tone-out will remain on simplex 154.430 only, simulcast until pagers are reprogrammed, or just be on the repeater. However, if you want to include it in a scan list, it is 155.055 out, 158.925 in. None of us at the department know yet what PL will be used. If you get any more info on the Robertson County digital, please update. If I get any more on Grimes, I will certainly post.

I know--where's the coordinator?? Ha ha
Yea the unit #'s I here on the Robertson county digital don't match the unit #'s I hear on the original freq 155.580 which is still in use. So I'm thinking that only a certain division have them right now (like constables maybe?) Unfortunatley I don't know anyone up there in Robertson county for more info. I'll just have to listen harder.
I wish there was a way to filter out different digital users on the same freq or at least for now filter out analog users on the same freq. Surely there's some extra data bit sent out that would work for such
I wonder how the the "real" radios do it, is their radio in an "open" squelch mode when in digital?? Seems like if they can't then there's going to be probs when Grimes county gets more active on digital on 154.800.
We'll give a listen on the fire stuff for Grimes.

Well, I don't know about Robertson County unit numbers, though if you know any please post them. To clear up any confusion if you think it may be Grimes units, here they are:
DPS Grimes - 2041-2045
DPS Waller (work Grimes County Regularly) - 2540-2547

First Responders - 730's
Game Wardens - 9100's
Grimes Constables - 1701-1703

Grimes Sheriff - 1401-1429
Grimes Jail/Dispatch - 1430-1479
Grimes Reserves - 1480-1499
Navasota Police - 9301-9323
St. Joseph EMS - M31, M32

These are the units that regularly use 154.800 MHZ.

Heard some 230x's today on 154.800 out of Robertson Co.However I don't know for sure what their title/rank is.
Not sure what the unit #'s are on their old (still in use) freq 155.580 but I know I don't hear any 230x's I like I hear on the new one. Their orig freq (155.580) is hard to hear in Brazos co.

hmmm. the only 2300 series I know are Houston area DPS. Maybe I'll do some asking around. And to update, the 154.800 P25 in Grimes County is on a repeater as well as the analog. Dispatch gets a readout of the unit number transmitting only when the unit is transmitting in P25 mode. Look out for 1400 series units. The signal was very strong here this morning. The digital signal even broke the 141.3 squelch in my dad's patrol car when I was talking to him. Of course his Maxon radio didn't decode it, but it was loud and clear as far as buzzsaws go.

From: Adam Johnson
Topic: 2823 Message: 2860

We also have a group of radio resources that we refer to as "I-Call" here in Travis and Williamson County. These are the NIPSPAC channels (Nation Wide interop channels)... They are basically the "Inter-City" of 800mhz. Any public safety agency with 800mhz would be able to communicate with another via these dedicated frequencies. If you hear our public safety folks talking about "I-Call" (usually associated with a geographic area like North, Northwest, South, etc) that is what they are referring to. We do have repeater capability on the I-Call channels, however they are not trunked. They are dedicated frequencies and can be used for direct, radio to radio (no-repeater) communications or we can activate a repeater and increase the performance range.

It sounds like the terminology of I-Call and what we call "Private Call" are sideways. I do know that water/waste water and other non-public safety agencies on our system don't routinely use the NIPSPAC frequencies... I am not sure they even have the capability on their radios.

We use these channels to communicate with Williamson County EMS units here at Austin/Travis County EMS. So far the system has worked well on several occasions.

In EDACS Public Safety Trunking, ICall is a MA/COM trademark for individual, unit to unit calls through the trunked system. ICalls are set up by dialing the Logical ID number of the Callee by the Caller, or by having this call pre stored in repertory memory. ICalls in the Bell County system are used to alert individual radios, such as the E/R of different hospitals, and the radio used to open the gate at the fuel depot.

NPSPAC channels are used in Bell County to communicate with visiting users that have non EDACS radios in 800 and that comply with the regional public safety plan.

The latest thing is for non 800 counties to install 800 Mhz Interop base stations to allow roaming users to communicate with local entities.

2862. Problem with Austin/TC I-calls (being mis-numbered)

Yahoo group: CenTexComm
Date: 2005-08-11 13:24:59 UTC
From: Robert
Topic: 2823 Message: 2862

And herein lies the problem with why it can get complicated. Williamson Co does have the same I-call frequencies and they are numbered as they should be country wide. Austin's I-calls are mis-numbered from the rest of the country:

1) 866.0125 which is Austin's I-call Central

2) 866.5125 which is Austin's I-call ch 1

3) 867.0125 which is Austin's I-call ch 2

4) 867.5125 which is Austin's I-call ch 3

5) 868.0125 which is Austin's I-call ch 4

So..... Say there is a big incident at Lakeline Mall. And Austin/Travis Co wants to communicate with someone on the Williamson Co system and they decide "let's use I-call Ch 1". Austin and Williamson County will not have the same channel 1. Austin had to be different. It would be nice if they had a talkgroup where the two systems could be patched. So far I have not seen that.

From: Aaron Slaughter
Topic: 2823 Message: 2863

I'm assuming you are referring to the NPSPAC channels. The Texas State Interoperability plan has changed a number of times as to the correct alpha display for the channels. Each 800 system will eventually be named the same. Austin, as well as every other 800 system in the CAPCOG region is in the process of changing all the names. The will be called:

866.0125 8CALL
866.5125 8TAC 1
867.0125 8TAC 2
867.5125 8TAC 3
868.0125 8TAC 4

Actually Robert, Austin first had channels labeled as ICALL, ICALL-NW, ICALL-NE, ICALL-SW, and ICALL-SE. When the first interop plan was established, they changed to I-CALL, I-TAC 1 through 4. You can't blame Austin when it's the State that couldn't decide what to call these channels. Everybody had their own naming system.

Expect these to get more use, too. In Elgin, we've got these on our "B-Zone" in our 800 radios on the Bastrop County system. It'll be our only method of communication with TCSO units (particulary Baker Sector units) as we start annexing more and more westward (currently, our city limits extend into Travis County to Klaus Ln, right next to Elm Creek subdivision in Baker 20's).

Mike :)

2865. I-Call / NPSPAC

Yahoo group: CenTexComm
Date: 2005-08-12 09:31:45 UTC
From: adam.johnson@ci.austin.tx.us
Topic: 2865 Message: 2865

I am far from a radio expert... I am merely an end user. For the technicalities and specific frequencies, I rely on the radio shop. :) That being said... We do have the capability to communicate with Williamson County via I-Call & now with our new radio templates, we can go directly to their system and talk on several of their Inter-Op, Scene and Helo talkgroups from our radio equipment.

Bottom line... We do have the capability to communicate with Williamson County. I was merely trying to relay some information to you guys about our use of the term I-Call (which is not for secure radio to radio "private call" as was mentioned in previous emails).

My console here at CTECC does now have the ICALLs labeled:

ICALL
ICALL-1 (NE)
ICALL-2 (SE)
ICALL-3 (SW)
ICALL-4 (NW)

My handheld has an additional "Direct" channel that corresponds with each ICALL.

Take care.

In Wilco on our Radio Display we have Tac 1 and I call the only thing we hear on the channels lately has been the Austin radio Shops testing the radios,
On several Calls we have talked to Starflight, Air 1 and a APD LT on our SO Tac Channels.

2867. Parks PD, Aviation and Marshals - Austin Public Safety

Yahoo group: CenTexComm
Date: 2005-08-26 15:34:18 UTC
From: Robert
Topic: 2867 Message: 2867

Word on the street is that Austin Park Police, ABIA police (Aviation Public Safety at the airport) and the City Marshals will now all merge into Austin Public Safety all reporting to Bruce Mills. This means a new paint job on the cars, new patches and the cars will NOT look like APD. They will have the dash cameras tho. Not sure how that will affect talkgroups. Maybe they will all be dispatched from the same place, which is not at CTECC.

Has anyone been playing with the new BC396D handheld? I know Wes has one and is very pleased with it.

2868. Incompatible radios are contributing to major public safety problems.

Yahoo group: CenTexComm
Date: 2005-08-31 19:07:33 UTC
From: Robert
Topic: 2868 Message: 2868

This is what I was scared of.

From www.radioreference.com <http://www.radioreference.com/>

There are numerous reports coming out of New Orleans area that incompatible radios are contributing to major public safety problems.

Quoting The Times-Picayune:

"On Tuesday, looters could be seen carrying away whole shelves of merchandise from stores in New Orleans with no police in sight. A shortage of boats left people stranded on their roofs a day after the storm passed. State, local and federal rescue workers, all supplied with different radio equipment, were having trouble communicating with one another."

and...

"The problem is being compounded, officials said, by a breakdown in the ability of public agencies to communicate with one another, said New Orleans City Council President Oliver Thomas.

"The most frustrating thing about this whole thing has been communication," Thomas said. "We have to devise a better system." Yeah, haven't we heard that before (9/11 ??)

8/31 1:17pm

Just a heads up, armed looters have taken over one of the medical centers in New Orleans where the injured people were being sent. They are holding the entire staff of the hospital hostage and firing at the National Guard. An FBI SWAT team has just been flown in (from Baton Rouge I believe) and they are just now getting situated.

This is what I was scared of.

"The problem is being compounded, officials said, by a breakdown in the ability of public agencies to communicate with one another, said New Orleans City Council President Oliver Thomas.

"The most frustrating thing about this whole thing has been communication," Thomas said. "We have to devise a better system." Yeah, haven't we heard that before (9/11 ??)

A lot of the time (if not most of it) the problem is not needing better systems. It is knowing how to use the current system correctly. It is frustrating from the listener's standpoint to hear an event going on and know that two agencies (like Ft. Worth and Arlington) have talkgroups set up so they can communicate. But since there is obviously a lack of training of both officers and dispatchers on this fact, they use the "delayed phone line information passing system". And even when agencies switch to NPSPAC and RMA channels, almost always (in my area), few know how to accurately do so. I've been wondering when it will become an issue with using what is already available and training on what is available rather than "we need new systems".

They need to hire some us who love and live with communications in mind :)! Interoperability worked better in the days of Intercity it seems. It's a shame too because technology has far surpassed the use of two frequencies (Intercity) and could benefit those who learn how to use it.

Thanks for the New Orleans information. Speaking of New Orleans, I just heard the HF Salvation Army Net pass 14303 kHz as the (amateur radio) frequency New Orleans EOC is up on now. Unfortunately 14300 is the Maritime Net and it is bleeding over onto 14303 pretty strongly, but there is communications on 14303 too.

From: commscan
Topic: 2871 Message: 2871

Hi Group,

I posted the following e-mail to my local DFWScan Yahoo Group earlier and thought it might be of some interest to those with HF capabilities. It has been edited (I cut out the stuff that was related to another e-mail I was replying to). The 7257 kHz frequency has been very active with actual S&R ops over the last few hours. The USCG is using this frequency (CAMSLANT callsign) for air evacuations of patients and people with medical conditions I believe. I've heard most going to Clearwater CGAS in FL and Mobile, AL. I'm getting too much interference to listen closely on this frequency right now. I imagine it'll go away (I hope) before too long. Anyhow, here's the e-mail from earlier:

. There is an interesting net frequency passed (came from the Salvation Army Team Emergency
Response Net . or SATERN) frequency 14265 kHz a little while ago. 7266 LSB (actually off frequency on 7265.7 kHz due to net operator's older radio being off frequency) is running Health & Welfare phone messages from Texas residents to those in the hurricane affected areas. 7290 LSB, as early posted by another member, is also doing the same. I think the 7290 LSB frequency is being used nationwide now to relieve some traffic on 14265 USB.

One last thing worth mentioning is, the USCG HF frequencies have been very active. 8983 USB and 5696 USB have been pretty busy with evacuations and other operations. And according to a few MilCom (mailing list) posts, the following BICE HF frequencies are also being used for rescue operations. The following information I've confirmed as being used by BICE (old US Customs), but I'm copying and pasting the following information from http://www.wunclub.com/newsletter/v10/n07/mla.html.

U.S. Immigration and Customs Enforcement (ICE)
==========
The COTHEN (Customs Over the Horizon Enforcement Net) HF radio system seems to have replaced the older JTF designated systems.

5732.0 Scan 1
7527.0 Scan 2
8912.0 Scan 3
10242.0 Scan 4
11494.0 Scan 5
13907.0 Scan 6
15867.0 Scan 7
18594.0 Scan 8
20890.0 Scan 9
23214.0 Scan 10
25350.0 Scan 11

All of these frequencies are in USB (upper sideband, or on older HF receivers, the beat frequency oscillator . BFO . switch or knob).

If anyone catches any good traffic, please let us know!

Brian Scott

2872. New Scanner Purchase - Pro-96

Yahoo group: CenTexComm
Date: 2005-09-02 13:52:28 UTC
From: jacksjr1962
Topic: 2872 Message: 2872

After being away from the hobby for a year or so, I'm getting back in so to speak, and thinking about purchasing a Pro-96. I have a Pro-93 that works fine for Williamson County (I'm in the 620-183 area), but need something for APD (I'm going to be annexed in a few years).
My intention was to go up to Radio Shack at Parmer & Mo-pac and get one - possibly today. Does anyone have any advice that I should know about?
Thanks,
Frank

2873. What's the latest on the scanner to buy

Yahoo group: CenTexComm
Date: 2005-09-02 14:43:13 UTC
From: Robert
Topic: 2872 Message: 2873

The Pro-96 handheld and the Pro-2096 base are both on sale for $449.99 ($50 off) so it's a semi good deal for the radio shack scanners. But, for that price the handheld Pro-96 doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289 http://www.pro96.com/ or software (http://www.starrsoft.com/software/win96/default.asp)

However, both are limited since they are first generation models. For instance, the City of Austin system supports I-calls and these radios do not.

The newest hottest thing out right now is the Uniden BCD396T handheld. It's quite a bit smaller than the Pro-96. This radio runs on 3 AA batteries. It has the latest technology but the initial units did have some problems so which I think are being worked out now. You may want to call the dealers and see if the one you would order is newer or has been on the shelf awhile. There has already been a firmware upgrade (which you can do yourself) but more importantly was an issue with the print on the scanner itself rubbing off. http://www.bearcat1.com/item0047.htm Hobby Radio Stop has it for $499 including shipping. (Cash, personal check, money order price) But if you need to use a credit card, http://www.bearcatscanner.com/ has it for $517 including shipping. http://www.usascan.com/files/bcd396T.cfm <http://www.usascan.com/files/bcd396T.cfm%20has%20it%20for%20519.95> has it for 519.95 $including shipping.

These companies are out of state so you are not charged Sales Tax which is a considerable savings.

Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283> http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283 for $16.99. It is very distinctive and has 800 MHz printed on the side of it in Orange.

Topic: 2872 Message: 2874

Thanks Robert, that's good information to have.
I have seen on some other message boards about reception issues and the different "tower" locations. How would I program the scanner related to the different banks? As I travel about town, would I need to program the different towers' control channel(s) into different banks, or could I program them all into one bank? or do I even need to have all of the different towers programmed in?
I already have the 800mhz antenna.
I live out northwest (183/620 area) and work down by the Capitol. Does anyone have experience with reception in these areas?
Thanks for all the help.
Frank

All you really need to do is to program in the 2 simulcast towers. They broadcast all of the talkgroups from all of the outlying repeater sites. Program the two simulcast towers in separate banks.

Reception on the BCD396 is very good countywide. I can't speak to the Pro-96 since I don't have one.

2878. RE: [CenTexComm] Military planes

Yahoo group: CenTexComm
Date: 2005-09-02 19:08:44 UTC
From: commscan
Topic: 2878 Message: 2878

Hi John & Group,

While I can't hear the traffic in your area, I would tend to say it is almost surely Katrina related traffic. Have they been bringing in mass evacuees from the affected areas to Austin like they've been doing in Houston, San Antonio, and my area, D/FW? There has been a massive influx of medical patients being flown into Navy Ft. Worth and almost all of the N Texas EMS services have been staging over the last two days to take medical victims. We have no more room in hospitals, and hospitals even farther out (like E Texas) are reportedly filling or filled up.

They may be supply aircraft or even National Guard troops heading to or from New Orleans. We've also had a few of those type (as well as out own 181dt AW C-130s) coming through Navy Ft. Worth while en route.

Brian Scott

Ft. Worth, TX

To: Central Texas Communications List
Subject: [CenTexComm] Military planes

Does anyone know what was going on around 10 AM this morning (Friday)? I didn't have my scanner handy. I saw at least 20 military planes circling into ABIA. It looked like a number of large cargo type planes followed by smaller planes. Because of the sun all I could see were silhouettes, but was able to make out the color (drab green) on some of the planes.

I'm guessing it's Katrina related.

John

2879. Evacuation Resource Center, located at the Delco Activity Center

Yahoo group: CenTexComm
Date: 2005-09-03 00:11:26 UTC
From: Robert
Topic: 2879 Message: 2879

I heard on the way home that Burger Center is already filling up. They will next start using the Austin Convention center and then AISD's Delco Center @ 4601 Pecan Brook Dr. by the STARflight hanger. This is currently being set up for medical .. They have all the PIO's enroute there now one group is on Interop A.

They will also be using Palmer Special Events Center (that they WERE tearing down).. as a medical Evac facility to have helos coming in from Houston and all areas taking patients to area hospitals.

http://www.austinisd.org/misc/hurricane_katrina/
Beginning Saturday, September 3, at noon, victims of Hurricane Katrina seeking assistance in Austin should go to the Evacuation Resource Center, located at the Delco Activity Center, 4601 Pecan Brook Drive, from 8 a.m. to 5 p.m. daily.

The Evacuation Resource Center is a first-stop for evacuees to check-in and obtain information about shelter and other emergency assistance designed to ensure their health, safety and well-being. Services in this process will be identified through coordination with the Austin-Travis County Office of Emergency Management and participating local, state and human service organizations, including mental health and emergency medical triage and support.

Individuals seeking shelter must first check into the Evacuation Resource Center before being admitted to the American Red Cross shelter located at the Toney Burger Center.

Call 211 or 512.973.9201 (if using a cell phone, or outside Texas area code)
Individuals who are unable to visit the Evacuation Resource Center should call 2.1.1 for information on securing community resources.

211 Texas links individuals to organizations providing food, clothing, shelter, health education, support groups, special transpiration, and provides referrals to:

a.. health and human services agencies,
b.. community organizations, and
c.. disaster relief services
United Way of Central Texas operates this service.

2880. Evacuee radio traffic in the clear (not digital) and not trunked

Yahoo group: CenTexComm
Date: 2005-09-03 14:56:35 UTC
From: Robert
Topic: 2880 Message: 2880

The first group of refugees are starting to arrive this morning from ABIA to the Delco Center (Ed Bluestein and Manor Rd)

EMS is using some of the I-call channels so even if you don't have a digital scanner you can monitor this traffic since it is in the clear.
866.0125 I call central (should be used when they start occupying The Austin Convention Center)
866.5125 I-call NE (where the Delco center is)
867.0125 I-call SE (where ABIA is) Traffic on this frequency now
867.5125 I-call SW (where Tony Burger Center is)
868.0125 I-call NW

As expect though, everyone is on separate talkgroups. Park Police using Interop A and H, AFD using Fire North, Cap Metro using their Comm 3, APD motor units are doing security and are on the Motors talkgroup and on L&W (or Highway Enforcement talkgroup, and ABIA is using their own talkgroups. They are all just having to use cellphones to call each other to talk to each other instead of getting on one common channel These above frequencies are also all that is available for the police in New Orleans as their trunked system has been down since the storm. Every generator to run their system was all on ground levels (below sea level) and is now under water.

2881. Control Channels in Same Bank

Yahoo group: CenTexComm
Date: 2005-09-03 22:13:56 UTC
From: Frank E Jacks, Jr.
Topic: 2881 Message: 2881

Can I put both of the two Austin Simulcast Towers' control channels in
the same bank?
Are there any negative aspects to trying this?
Frank

No, Frank. It will only lock onto one control channel per bank.

From: Frank E Jacks, Jr.
Topic: 2881 Message: 2883

Thanks, that's what I was afraid of.
In the old days, I had a bank dedicated to my home area in northwest Austin;
another bank dedicated to my work area in downtown Austin;
another bank dedicated to only AFD and EMS (with Firecom, STARFLIGHT, etc);
another bank dedicated to Travis County Sheriff;
a bank dedicated to the airport and airlines only;
a bank dedicated to media, AISD, malls, etc;
a bank dedicated to Lake Travis;
a bank dedicated to winter activities (snow plows, etc);
a bank dedicated to Cedar Park;
and a bank dedicated to Williamson County.
It looks like I'm going to have to re-think my bank allotment.
It's exciting getting back into the scanning hobby, but a little daunting with this new Austin/Travis county system.

2884. Listening most of the day to incoming refugee traffic.

Yahoo group: CenTexComm
Date: 2005-09-04 05:19:08 UTC
From: Robert
Topic: 2884 Message: 2884

It's been very interesting listing. Aircraft have been arriving all day long they are putting them all at the Austin Convention Center. They decided not to use AISD Delco center. One of the craziest things I first heard what when AFD decided they wanted to use talkgroup:
1163 AFD Firecom C03

Ok that's fine.. but then they realized a bunch of radios did not have this talkgroup and had to call the radio shop and have them come out on a Saturday morning and reprogram all their radios.. ???? do what ???? this is a talkgroup and it can be patch to any other talkgroup. So even if they don't have this specific talkgroup they could find one that they do have and patch it to this one. Either that or they could have gone to one of the unused talkgroups and there are many.. Blue 1-16 was available and everyone should have it already; All of the interops were available. A-H This is a prime example of how they have this big fancy radio system and don't even know what it can do. Apparently there must be a very select few that know how or can patch talkgroups and who knows whey they never think of this. I'm even wondering why the radio shop did not tell them that it could be done. They even have the Red channels which I thought were designed for this very event to have common talkgroups. oh..well. you can lead a horse to water but.....
they still don't know how to use the radio system. Not sure why EMS is using 867.0125 instead of the trunked channels but that's fine with me. Maybe that's what they were using in New Orleans so they just kept with it.

Also if you locked out the convention center talkgroups, you might want to put them all back in. Very interesting listening.. It's been going on all day and I think they finally go their radios reprogrammed and most of the bugs worked out. OH they ran out of food and wheelchairs but other than that, it seems to be running smoothly. They are using office chairs for wheelchairs. One women even brought her dog on the plane and no one even detected it until they tried to take it into the convention center. No on a carrier, on her lap. All people are bussed from the airport to the convention center. AFD motor units escorts them through intersections, so they don't have to stop at red lights.. most of the people arriving have gone 10 hours without food.

Regarding the scanner programming of towers, Wes is correct. The city has Simulcast 1 towers which are supposed to be towers that are within the city limits and The Simulcast 2 towers are supposedly all in the county. The scanner will only look for 1 control channel (tower) per pass and after it finds it, it will then jump to the next bank and look for another control channel (tower). I do put all the Remote Intellirepeater sites in one bank and that way when the radio looks into that bank it will stop at the first strongest control channel and search for active talkgroups on that one. There are many talkgroups that are only on Simulcast 1 towers and others that are only on Simulcast 2 towers.

Any chance of getting an example of how your banks are programmed...with the towers, frequencies, and talk groups...for us newbies? I can't tell a remote intellirerepeater from a local...:)

Any help is greatly appreciated!

Thanks
Mike

From: Robert
Topic: 2886 Message: 2886

How I set up my scanner (from www.radioreference.com)

Bank 1: Towers located in the city
101 Simulcast 1 866.16250* 866.28750* 866.41250* 866.56250* 866.71250 866.81250 866.92500 867.08750 867.11250
867.31250 867.33750 867.57500 867.60000 867.82500 867.85000 868.10000 868.12500 868.36250 868.42500 868.62500 868.68750 868.95000

Bank 2: Towers located in the county 102 Simulcast 2 866.13750* 866.31250* 866.38750* 866.58750* 866.73750 866.83750 867.16250 867.18750 867.41250
867.63750 867.68750 867.95000 868.05000 868.27500 868.32500 868.55000 868.57500 868.85000

Bank 3: are the Intellirepeaters which only repeat traffic when a radio can get this site better than the above 2 103 Marble Falls IR 866.88750 867.28750 867.80000* 868.15000 868.75000
104 Honeycomb IR 867.26250 867.72500* 868.17500 868.77500
105 Burleson Manor IR 867.87500 868.22500* 868.50000 868.92500
106 USGS Shingle IR 867.66250 867.92500* 868.40000 868.80000
107 Bastrop County 866.23750 866.95000* 867.23750 867.55000
108 Fayette County 866.78750 867.05000* 867.47500 867.97500
201 Davis IR 866.86250 867.13750* 867.77500

Bank 4: Williamson County. Trunked Analog System001 Primary 854.96250 854.98750 855.21250 855.71250 855.98750 856.96250 856.98750 857.96250* 857.98750
858.96250* 858.98750 859.96250* 859.98750 860.78750 860.96250* 860.98750

Bank 5: What I did in this bank is put in the inputs to all the Austin/Travis Co Trunked frequencies. Inputs are 45 mhz less than what is displayed above, so 866.1625 is 821.1625 i put them all in.. and i use this bank when I'm close to something. such as the Bitter End Fire. I can monitor this bank and everything is much clearer since it's all going directly from their radio into my scanner.. no repeater to try to pick up and no delays and he signal is very clear.

2888. Reprogramming on a holiday weekend

Yahoo group: CenTexComm
Date: 2005-09-04 16:47:24 UTC
From: Glenn Morris
Topic: 2888 Message: 2888

On Sun, 2005-09-04 at 09:24 +0000, Robert wrote:
> I'm even wondering why the radio shop did not tell them that it could
> be done.

If their radio shop is an independent contractor, I know. I had over five years with Motorola. The first three were servicing PD/FD systems.

First, do you have any idea what it costs to call out a tech on a weekend? Especially for non-emergency (non-contract) calls.

Second, most shops charge on a "per radio" basis for reprogramming. If the customer, who has paid for training on the system, insists that they want talk-groups added, so be it.

Third, the radio shop manager/owner was probably not even informed and the tech on duty is almost always told "Do not argue with the customer. Do what they ask. Write it up. Get a signature. We'll handle the billing." It is easier on the tech not to have to make in-field decisions like this if he doesn't have to. It gets him in trouble more often than not because he is not told all of the contract beyond "It is your job to make it work when it doesn't."

Regards,
Glenn

I-35 divides east/west
2222/290 divides north/south

Adam - Northwest (jonestown/lago/etc)
David - Southwest (oak hill/pedernales)
Baker - Northeast (includes the part of travis county WEST of 35 NORTH
of 183 near pflugerville)
Charlie - Southeast (setco)

Mike :)

2892. New Orleans Cont ...

Yahoo group: CenTexComm
Date: 2005-09-05 01:14:18 UTC
From: commscan
Topic: 2892 Message: 2892

Hi Group,

VR-59 Ops (384.5) is asking/reporting to their incoming aircraft that a USCG helicopter was shot down in New Orleans today. The Ops reported their news said it crashed.

On a similar note, FOX 4 (I believe) News reported National Guard troops shot and killed 5 out of 8 snipers who were shooting at US Army Corps of Engineers workers.

2893. 3873 LSB Emergency Net

Yahoo group: CenTexComm
Date: 2005-09-06 00:11:16 UTC
From: commscan
Topic: 2893 Message: 2893

Hi Groups,

The Gulf Coast Emergency Net, set up to pass priority traffic such as name, addresses, phone numbers, and situations requiring rescue ops, has moved to 3873 kHz LSB.

There really has been a problem with redundancy of emergency messages though. The same messages, which appear to be received via e-mail, are being put out over the net numerous times. I'm not sure how these messages are received or sent, but this has been a regular problem with emergency traffic being passed. It appears that stations come up on frequency to advise of a search & rescue type message they've received but do not know that the message has already been passed up to a few hours ago at times. It really slows things down for the net controllers. Is there any way these messages can be cleared out once the net controller gets them? Maybe there could be a website that the radio operators could go to so they could see and determine if it has been dispatched already?

These are interesting ops to listen to. Two of the newest ones (baring the personal information passed) had to do with a college dorm with 12 girls trapped on the 4th floor w/o food and water. If I were stranded, I think I know where I'd like to be .

Many other messages/traffic has to do with senior citizens trapped in a senior building, a Chinese family trapped in their home and still waiting for rescue, and a huge number of medical related scenarios involving trapped people.

If you have the ability to listen, it would be interesting to hear. While the media has reported rescues have slowed down now (and they may have), it seems like traffic (or rescues) have picked up on these SATERN emergency nets.

The Mississippi EOC, Baton Rouge EOC, and many other EOCs (many from Texas) are all on the net. Belle Chase's operator was evacuated out today, so it sounds like the New Orleans area is lacking in radio operators/contacts now. Since most of the rescue traffic is for rescuing people inside of New Orleans, I guess the traffic is passed along from the net controller, EOCs, or whoever receives the traffic must be getting passed to law enforcement and other S&R agencies?

The daytime net (which isn't always really used during daylight) is 7285 kHz LSB.

2894. Talkgroups and freq used in conjunction with Evacuee's at Austin Convention Center

Yahoo group: CenTexComm
Date: 2005-09-06 11:46:49 UTC
From: Robert
Topic: 2894 Message: 2894

I would like to see all the talkgroups together so agencies realize they can "share" use of the talkgroups.. For instance, I think they should all use the Interops or the Reds or the Blues, that way EMS, Fire, volunteers, COA, and everyone realizes that anyone can use these common talkgroups and it would get them more comfortable using them. APD could be on the event channel but can't because parks police which is helping with security doesn't have this talkgroup. Fire and EMS are using their respective talkgroups which are not shared with APD or city agencies and of course none of these agencies have the airports ops and none of the public safety has the City manager talkgroup or the health dept or Information Technology. If they were all together, then if EMS needs a PD office they just flip their radio one or 2 clicks and they are on their channel. this way they have no direct contact, they have to call command post and get them to relay. If an officer has someone go into a seizure, they have to do the same thing, get the command post to relay to EMS.. why not just flip one or two clicks to the one EMS is using and call them directly that way they can direct them into the area where they are at.. direct communication. Also no none of the agencies using the building have directly contact with the convention center people so they keep having to walk over and find the person they need to talk to or call them on the cell phone. They could patch one of the interops to the Convention Center main. What's even more weird and funny is how all this is taking place inside one building and yet they are all using digital trunked radios broadcasting all over the city.

On page 1 of the Sun., Sept. 4 New York Times is an aerial photo of a parking lot at the New Orleans convention center. There are 7 helicopters on the ground. At one side of the parking lot, "hand" painted on the surface in figures about 25-feet high, are the numbers: 257.8. How's that for a high-tech way to notify pilots what frequency to use?

from http://www.2theadvocate.com/stories/091005/new_communication001.shtml and http://www.radioreference.com/forums/showthread.php?t=20689

Louisiana should be the test site for a new communications system that won't break down during a disaster, the head of homeland security for the Louisiana Senate said Friday.

Despite problems during past disasters, such as the Sept. 11, 2001, terrorist attacks, people die unnecessarily because leaders and emergency workers can't talk to each other during a crisis, Sen. Robert Barham said.

Even 11 days after Hurricane Katrina came and went, "You still can't get into the 504 area code (by phone) with any reliability," said Barham, R-Oak Ridge.

"There is a certain inertia in both the state and federal governments," Barham said. However, "We've got to solve this problem."

The rebuilding of the New Orleans area following Hurricane Katrina is a good opportunity to install a communications system that will be usable after an attack, storm or earthquake, he said.

This is part of an article; Basically one of the major problems with relief assistance trying to come in to New Orleans is their inability communicate with the local authorities. Why ?? because they decided on a digital ProVoice system that is compatible with no one else. It's the same set up in San Antonio. When will anyone realize that the more secure your radio system, the less anyone who wants to come in and help is able to do so. SA should scrap their system now before something bad happens.

This might clarify the San Antonio, New Orleans and Bell County trunked radio systems comments:

http://www.radioreference.com/wiki/index.php/Hurricane_Katrina#Louisiana

Personal experience - in 6 years there have been 2 extensive system failures, in Bell County, both caused by lightning. One blew up the protectors on the T1 lines between a transmitter site and the control point. Communications were not lost, but the dispatchers had to use their backup radios. The second failure, 2 years ago, July 3rd had two lightning strikes, the first destroyed the receive antenna and tower top amp at the control point site along with multiplex and T1 circuits, the second destroyed the ALI lines on the 911 incoming circuits causing loss of caller ID information. Calls still came in, but without address info. With the main site deaf we placed a peripheral site in bypass and continued to operate with reduced coverage until we reconfigured antennas at the main site (used a transmit antenna for receive without the benefit of a tower top amp) and restored the copper T1 links between 2 of the sites. Over two hours in the dark. NPSPAC repeaters shared the same blown up antenna as the trunked repeaters. (and still do).

From what I understand, in New Orleans, one rack of combining equipment got wet, and the backup power generators were flooded. When the batteries at the sites ran down the sites went dark. Another problem was that while the walkie talkies could still be used in talk around mode, they had no means of recharging batteries. Hope folks can learn from the failures and prevent them from happening next time.

Best regards,

Steve

Another cause of failure:

http://www.wirelessestimator.com/breaking_news.cfm

Most towers are built to withstand 80 or 90 mph wind, maybe more in the Gulf Coast area. The survivability of a tower is a function of $$$$$. I suspect most are not willing to commit the resources to make a tower hurricane / tornado proof.

Interesting - neither the generators or towers or T1 circuits have anything to do with the brand of equipment that they support.

Steve

From: commscan
Topic: 2901 Message: 2901

Hi Groups,

There has been a radiological (dirty bomb) exercise going on over the last few days.

Richland Hills, Grapevine, & Arlington have all been mentioned over the last few days on this radiological contamination exercise. All of these FDs (and I'm sure more) have been participating. "Go ahead and call FBI, CIA, FEMA, and whoever" was just relayed from Command to Ops.

This is a repeater operation so many of you should be able to hear it if you're interested. And the new 21200/21168 shelter TGs on the FWPS system, while not necessarily a part of the WMD drill, are definitely used by the same users (Command, Ops, Recon, etc.) as the NPSPAC 1 (866.0125) frequency.

Also, I cannot remember if I mentioned this. W-TLK3 (2928) has been the primary security TG for the Will Rogers Coliseum shelter and C-TLK3 has been carrying related traffic from SWAT units working Will Rogers. I've only been seeing SWAT radios on C-TLK3 too.

I hate to do this, but chances are good I won't be able to reply to any e-mails on this topic. I just won't be able to keep up with my e-mail like I wish I could over the next few weeks (and I'm already behind in many e-mail replies as it is).

Austin is the next city this exercise will be (or may be now) occurring in. I don't know if this is being simultaneously conducted in multiple cities but these guys and gals have mentioned "when we get to Austin next .".

2903. Katrina Re-Identifies Need For Emergency Communication

Yahoo group: CenTexComm
Date: 2005-09-15 03:58:27 UTC
From: Robert
Topic: 2903 Message: 2903

After surviving Hurricane Katrina's initial blow, the radio communications system for the New Orleans police and fire departments dissolved as its radio towers lost their backup power generators in the ensuing flood. Some of the equipment could have been brought back up quickly, except that technicians were blocked from entering the submerged city for three days by state troopers who were themselves struggling with an overwhelmed radio system from a different manufacturer. 'I didn't get a chance to plead my case,'' said Jan Edwards, service manager
for the New Orleans radio system's maker, Tyco International Ltd. subsidiary M/A-Com Inc. While Edwards and his team were detained on its outskirts, emergency workers inside the city were mostly limited to a handful of CB-like ''mutual aid'' radio channels, which were quickly overwhelmed.
Four years after the 2001 terror attacks exposed the need for more robust, interconnected communications during such calamities, with nearly a billion dollars appropriated by Congress for the task last year, the United States still lacks uniform systems that can keep all emergency responders in touch.''We're no better off than we were then,'' Louisiana state Sen. Robert Barham
said last week.
With regular phone and cellular service knocked out in Katrina's wake the New Orleans mayor's office had to cobble together an Internet phone link with the outside world _ first responders were simply unable to share essential information. Federal emergency management officials claim they didn't know for days about thousands of people camped out, thirsty and hungry, at the New Orleans
convention center. Rescuers in helicopters couldn't talk to crews patrolling in boats. National guard commanders in Mississippi had to use runners to relay orders. On Tuesday, Democrats on Capital Hill urged Congress to devote $5 billion a year to upgrading communications equipment for the nation's first-responders.
Sen. Mary Landrieu, D-La., said the hurricane exposed a ''totally failed communication system.'' But many experts say doling out federal monies is far from enough. Some advocate creating a national wireless data network _ with its own dedicated emergency frequencies _ that police, firefighters and all other responders could plug into immediately after a catastrophe.
Such a system wouldn't be immune to damage but could be quickly repaired, says one of its advocates, Reed Hundt, who chaired the Federal Communications Commission from 1993-97.
''You drive the new antenna in on the back of a truck or you carry them in on choppers if they're knocked out or drowned and you can get your network back up in hours,'' he said in an interview.
Hundt says he's suggested such a project, but the White House has ignored it.
The Department of Homeland Security did not return phone calls seeking comment on the issue.
Since 2001, the federal government has given $8.6 billion to states for equipment, first responder training and disaster exercises. Last year, DHS gave the states $2.1 billion, of which $925 million was spent on or earmarked for communications equipment upgrades. The department, however, does not tell states what to buy, though it stresses that any system deployed in the field should be able talk to another agency's system, known as ''interoperability'' in industry parlance.

Complaints of difficulties in communicating across agencies have been frequent after major disasters _ including the Oklahoma City bombing of 1995, the 2001 terror attacks and the southern California fires of 2003. Other reasons emergency responders have trouble talking to each other include turf wars among agencies and interference from cell phones on some frequencies.
But one of the biggest hurdles is time and money, said Adrienne Dimopoulos, spokeswoman for Motorola Inc., a longtime public safety radio supplier. ''It takes a long time to design them, it takes a long time to implement them. They're costly,'' she said.
New Orleans bought the M/A-Com system in 1992. Four years later, Louisiana State Police bought its statewide system [big mistake] from Motorola Inc. The two systems have occasionally been bridged to integrate communications during major, planned events such as the 2002 Super Bowl. The statewide system did stay up after Katrina hit on Aug. 29, while New Orleans' was off the air just a few hours later.
In addition to generators disabled by floodwaters, the city network's primary tower, located atop the Energy Center building, was knocked out when debris struck a radiator, springing a leak.
That forced local agencies to communicate over a handful of 'mutual aid''channels.
''There might be two or three channels for the area, and there are 4,000 people trying to talk,'' said Chuck Shaughnessy, M/A-Com vice president of operations. ''It tries to be controlled chaos, but it's usually not very controlled.'' According to documents posted on the Louisiana State Police Web site, officials were long cognizant of the interoperability problem with New
Orleans' police and fire departments and formed committees to come up with a ''totally interoperable'' system. Planning had barely progressed, however, when Katrina hit.
But system compatibilities in emergency communications alone cannot fairly be blamed for delays in rescuing the flooded or getting food or evacuation to stranded refugees. The much-criticized federal response to Katrina shows that even the latest equipment is no guarantee of smooth communications, said John Pike, director of GlobalSecurity.org ''They had all the radios in the world. They had complete interoperability,'' Pike said of federal emergency officials. ''That was not a hardware problem. That was a people and procedure problem.''

Associated Press writers Stacey Plaisance in Baton Rouge and Jennifer C. Kerr> in Washington contributed to this report.

How would Austin relate to this? With the Old UHF system, APD had direct cababilites on almost every frequency, (Adam direct or 460.100 direct) so a power outtage like this from a storm would not have made a huge difference. With the new digitial trunked sytem they have now, I'd be willing to bet that less than 10% of the radio users know how to go to one of the only 5 direct channels common to the entire Austin/Travis Co area. The city would be in kaos with police, fire, sheriff, EMS, power crews, tree trimming crews, garbage men, and everything from Williamson county and Everything from Caldwell co, and Bastrop Co and all on 5 NSPAC frequencies. You would have more channels if you went to Walmart and bought a 23 channel Family service radio. Money well spent.
I hope perhaps people will learn from all this. The cell phones and the trunked radios are great. when they work. but what is plan B? Remember when they jerked the 155.34 radios out of all the hospitals. Smooth move. Let's rely 100% on phones and repeaters. If a storm strikes tonight knocking out the trunked system and all cell phones, Austin EMS could not talk to any hospitals at all. I guess the ham radio operators would have to start riding every fire truck, every police car and every ambulance to communicate. Either that or someone with a CB or Family service radio.

From: Steve Bosshard (NU5D)
Topic: 2903 Message: 2904

Wouldn't it be nice if there were an 'open' standard where one brand of system could back up the other. If I understand correctly, one vendor charges license fees to other vendors in order to use compatible technology, making compatible systems (project 25) difficult at best. That is my understanding, but I may be wrong. In trunked systems everyone does pretty much the same thing, differently and without compatibility.

Disparate systems can be bridged together on a limited basis, but if one system is dead in the water (no pun intended) users of that system are in trouble.

Maybe folks can learn from this tragedy.

Steve

To my ancient way of thinking the answer to this problem is to retain the new technology systems for everyday use with all their benefits but to set up a low frequency (30mhz) conventional system network for an emergency back-up and interoperability. Such systems have exceptional range, and simplicity of operation. It means all units and dispatch centers have to have equipment that is not used most of the time but is instantly ready for emergencies. Fortunately such old technology "spare tire" equipment is not costly and would be a small fraction of the cost of new sophisticated systems marketed for supposed interoperability. This is not a very exotic solution but I'm convinced it would work and work well. Walt22

2907. Austin/Williamson County communications to change

Yahoo group: CenTexComm
Date: 2005-09-16 13:28:47 UTC
From: ExLngHrn@aol.com
Topic: 2907 Message: 2907

First responders to link systems
Communications systems for first responders in Travis and Williamson counties will be linked using $6 million in federal grant money that was awarded Thursday.
Peter Collins, chief information officer for the City of Austin, said digital upgrades will allow emergency workers and law enforcement personnel in Travis and Williamson counties to talk to each other. Communication breakdowns were blamed for chaotic responses to both the Sept. 11, 2001, attacks and Hurricane Katrina, he said.
Austin officials applied for the grant, Collins said, but Williamson County will get most of the money -- $5.5 million -- to replace its analog communications system with a digital system like the one used by Austin and Travis County. Austin will use about $500,000 to upgrade software. Williamson County will provide $1.8 million and also must pay to replace radios throughout the county.

2908. Please Williamson Co - don't go digital

Yahoo group: CenTexComm
Date: 2005-09-16 15:15:23 UTC
From: Robert
Topic: 2908 Message: 2908

Oh please Williamson Co - I beg that you do not go digital. Please.. this is part of the problems they had in New Orleans.
I don't see any reason to go digital at all. Williamson Co spent years getting their current system working like they want and it works really well for them. I fear that they think "digital" means secure but it does not. Scanners will be able to monitor and you should talk to some cops on the street in Austin before you decide to spend $5.5 million. Williamson Co is very spread out and I don't think it will be that effective for them to go digital. They have so many little communities that may not be able to afford it: Weir, Thrall, Andice, Taylor, Florence. Plus, since we are about to go through rebanding, this really doesn't make sense knowing that everyone on 800 is going to have to move and spending money a year or two before the rebanding occurs. Please do not listen to the salesmen. I would rather see them spend the money to link all the little towns and get towns like Leander linking to their system.

From: Myles Barkman
Topic: 2908 Message: 2912

Nextel is going to pay for everyone's (except scanner monitors) radio reconfiguration.
Whatever radio system Williamson Co is using now should have no problem being able to be refarmed and the addition of P25 causes no additional difficulty for refarming.
Some smaller (read older) 800 systems may be too obsolete to be refarmed. How Nextel handles them having to scrap old radios for new ones, I do not know.

Rebanding ... the postcard version ...

Public safety users with licensed channels in 866-869 mhz will negotiate
a planned swap with licenses in 851-854 mhz held by or to be acquired by
Nextel. Nextel will exchange existing (used) equipment with refurbished
(used) equipment if the existing equipment can't handle moving down 15
mhz in the 800 mhz band. Nextel will continue to operate their iDEN
network with channels in the 854 to 869 mhz range instead of 851 to 866 mhz.

Public safety users with licenses in 854-866 mhz range don't need to
move - but will have to continue to cope with licensed Nextel iDEN
channels interspersed through out this range.

I think the intent here was to take the 866-869 mhz public safety band -
which was sandwiched between Nextel iDEN channels below 866 mhz and AMPS
analog cellular above 869 mhz - and move it down the band - away from
these noisy neighbors.

Thank you Rick. Now that you have explained it, it is coming back to me.

I used to work for Motorola in WDC (and overseas) but left them in 1992. I kept a lot of my contacts until the sold off 99% of their C&E service centers. Almost all of my buddies took the very nice "go away" package Motorola offered and either retired, moved to Montana or found employment with the PD/FD that used to contract Motorola.

Since then, my contacts with the Public Safety two-way work have dwindled to only being a scanner and one old buddy who now services a taxi/limo company and tries to stay current with the changes. (His company is being moved from their current 800 freqs to new 800 freqs. They started the move two weeks ago.)

Thanks again,
Glenn

2916. Austin, San Antonio, & Houston Journey

Yahoo group: CenTexComm
Date: 2005-09-19 06:16:43 UTC
From: commscan
Topic: 2916 Message: 2916

Hi Group,

I'm heading to Austin on Tuesday, 9/20, on the first leg of a three stop "Journey" of sorts. I'll be heading to San Antonio the following day, 9/21, and then to Houston the day after that. I'm wondering if anyone from any of these cities might be able to help me with some frequencies for certain venues I'll be going to. The first, in Austin, is called The Backyard. I was there two years ago but never had a chance to look for frequencies. The second venue is called the Verizon Center (I think) in San Antonio (actually a small suburb of SA named Selma). The venue in Houston (or The Woodlands) is the Cynthia Woods Mitchell Pavilion.

I'm hoping that some list members may know of some frequencies used at any of these venues. It is really difficult to look for frequencies while being at a concert. I've still never found the frequencies used around my own area's popular venue for many shows (The Smirnoff Music Centre . old Coca Cola Starplex).

If anyone can help out, I'd greatly appreciate it. Thanks in advance .

Brian Scott

2919. Parts / component suppliers

Yahoo group: CenTexComm
Date: 2005-09-20 01:30:32 UTC
From: Tom
Topic: 2919 Message: 2919

Hello, all -

Being somewhat new in the Austin area (I'm a Colorado expatriate), I'm looking for a local electronics parts supplier to feed my habit... Radio Shack seems to be slowly phasing out their parts stock, and Fry's pricing is outrageous! (I'm paying for shelf space far in excess of the actual value of the parts...)

Are there any electronic part / component suppliers in the area that have a decent selection and reasonable prices? Not only resistors, capacitors, transistors, etc., but connectors, hardware, and the like.

I can go mail- or internet-order via Mouser, et.al., but I'd prefer to have somewhere local to go on a Saturday morning...

Thanks -

Tom

2921. ACL Fest will have more cell towers

Yahoo group: CenTexComm
Date: 2005-09-20 03:50:17 UTC
From: Robert
Topic: 2921 Message: 2921

ACL fest is this weekend - not sure what will happen Weather Wise.
They have set up some temp cell towers in Zilker park for the festival: Cingular has 3 towers, ATT and Sprint have each set up a tower.

Security working the event is BW3 ?? Does anyone have frequencies for them?
They may just be using simplex radios at the event this year. except for transportation vans which may use a UHF trunked system.

Last years frequencies: (all parks ops are still on 453.325) not make the move to 800 digital yet.

460.8625 primary freq talkgroups will be here until this freq is busy and then it will go to
the next frequency.
460.7375 then
464.4500
464.300 busses? .461.150 464.725, 461.425, 460.7625, 460.8125, 460.8375)
Also heard activity on and it may be part of the above system.
463.7000
461.0875
461.2750
461.5750
Also active are 461.3125, 464.500 464.55, 469.5,469.55 461.3375 461.3875
465.6875 466.0875 467.2125
Parks 1 453.325 Ground Crews that work for Parks Dept
Parks 2 453.575

2923. Hays Co now on LCRA talkgroup 06-011

Yahoo group: CenTexComm
Date: 2005-09-22 14:45:46 UTC
From: Robert
Topic: 2923 Message: 2923

Hays County is now on LCRA Talkgroup 06-011. I assume they are still simulcasting on 155.865.

They were on 02-141 Not sure why they switched.

The LCRA Emergency Operations Center is on 02-154 and will have an 11:30 on air briefing on that talkgroup.

Remember, their radio system extends all the way down to Matagorda Bay, so it might be some interesting listening.

I just got a page that TxDOT is converting I-10, I-45 from Galveston and Hwy 290 all lanes to outbound traffic only. I hearing reports of major delays.

Tx Dept of Heath sent a request to EMS agencies requesting ambulances to help evac people from nursing homes etc. Their memo said to bring you cell phones. Yeah right.. the cell phone circuits in Houston are jammed.
Bring your SAT PHONES.

There is a steady stream of helicopters coming into the Austin area either going to area hospitals or ABIA. I'm hearing many of them on 155.34

ATCEMS Comm was on this frequency yesterday trying to do "Flight Following"
They need a separate dispatcher just for that.

Everyone be safe and enjoy the listening.

My guess was "race relations" (you know, zebras are black and white).
There seemed to be a lot of traffic about SPHS which made me wonder if
something's going on.

The area around Deerpark Middle School is chaos.

Oh, there's traffic on 155.475 MHz around NW Austin.

SPHS is being used as a shelter for hurricane evacuees.

155.475 is a nationwide police mutual aid frequency. Not sure if TxDPS uses it around here, but in the Lubbock area, it's a back channel called "USA."

You are correct. Specificlly Zebra are off duty Patrol officers.
Most of the non patrol officers have permenent callsigns that they
use all the time. The patrol officers call signs are based on there
shift/sectors/beat, so there are overlaps.

George

2940. RE: [CenTexComm] ACL 2005 Frequency List

Yahoo group: CenTexComm
Date: 2005-09-24 10:30:10 UTC
From: commscan
Topic: 2924 Message: 2940

Thanks for the Austin City Limits list. I had to cut my trip short due to Houston not really being a place I could've gone after leaving San Antonio. I never did get any frequencies for Austin's Backyard or San Antonio's Verizon Center. But I did have some good fortune and was able to make my way into both venues, pass security, and without any employee tag hanging around my neck by just acting like I belonged there as I walked through the gates (a few hours early) where employees enter. I got to sit through the sound checks at both shows and even meet some of the band members from Journey, one of my old-time/all time favorite bands from the era when I was (attempting to) growing up. I had a great trip even without listening to the radios at the venues. I have to admit though, it killed me everytime I heard radio traffic going on and was not able to tune it in. This rang especially true when I was wondering if it was related to me and my friend. We probably stuck out like a sore thumb. We were the only ones not working :).

2941. Just In Case ...

Yahoo group: CenTexComm
Date: 2005-09-24 13:32:34 UTC
From: commscan
Topic: 2941 Message: 2941

Hi Group,

I received a reply to the message I posted earlier regarding sneaking into the two concert venues. I just wanted to clear up this fact in case anyone was wondering :). I did buy tickets to all of the shows I went too. I don't think I made that clear. I was just able to slip in early and get the extra show (sound check) at each venue. "I'm not a crook" :).

Brian Scott

2942. Interesting activity over Austin today

Yahoo group: CenTexComm
Date: 2005-09-24 22:49:02 UTC
From: Phil
Topic: 2942 Message: 2942

Heard a fighter aircraft doing some tight manouvers over my hourse today (NW Austin), went outside with the scanner and saw what looked liked like an F-16 doing circles fairly high over the town, with some flare-like contrails here and there.

Just checked the News8Austin website and saw thew article below... Didn't hear anything on the airbands, though.

A fighter jet seen streaking over south-central Austin Saturday afternoon was chasing away a small, private plane that wandered into the no-fly zone established for President Bush's visit, an Austin-Bergstrom International Airport spokeswoman said.

Airport officials could not say if the small, Cessna-type aircraft was forced down or if the pilot would be questioned.

Several Austinites saw the incident when a fighter jet flew circles and popped flares around the plane.

I went out to the airport to see if Air Force 1 would show, and sure enough it did. While I was out there trying to take some video I heard the tower try to contact that guy, he wasnt responding. The controller then said they were dispatching an F-16 for him , to please respond. Don't know if he ever did, but I'm sure it was a mistake, and he probably wasnt even listening for the controllers, or totally off freq. Right before AF1 landed they advised everyone within 30 mile of the airport that they couldnt not enter/leave airspace for 10-15 min.

I was wondering what he was up to. My daughter and I were out
shopping in Round Rock and saw/heard the jet.

2948. Pro-96 & problem with Austin/Travis County System

Yahoo group: CenTexComm
Date: 2005-10-01 18:26:55 UTC
From: tcolgan1964
Topic: 2948 Message: 2948

My new Pro-96 has a problem with the A/TC system. Imagine, if you would, someone talking, but at irregular times and frequent intervals, a syllable or syllables got dropped. The sound would be very choppy and difficult to understand, right. That's what the Austin system sounds like.

I loaded the TX/LA system info from the V-folder.

I've not changed any other settings from the defaults.

The LCRA and Williamson Co. systems are OK.

Here're the particulars on the scanner:

S/N: C027297
CPU: 1.3
DSP-APP: 1.2
DSP-VOC: 1.0.

Your suggestions are very welcome. If I can't get this taken care of, the scanner goes back next week.

Thanks for your time.

Why would you imagine that it won't work? It works for several
others... just taking the scanner back won't solve the problem.

What antenna are you using?

I know you're on the default settings, some folks here have a set of
"tweaks" that works for them - I'll leave it to them to post them out.

You also don't mention where you are.

Mike :)

And rather than just relying on the V-folder info, have you tried programming either of the simulcast towers using the information from RadioReference.com?

I rarely, if ever, rely on preprogrammed information. Try programming the Simulcast 1 and Simulcast 2 sites, each in a separate bank.

2954. Pro-96 and Pro-2096 & the Austin/Travis County System

Yahoo group: CenTexComm
Date: 2005-10-02 18:37:10 UTC
From: Robert
Topic: 2954 Message: 2954

The most popular software for the Pro-96 and Pro-2096 is Win 96 from www.starrsoft.com
if you have that software, you can try loading up the data file that I created for Austin.

It's in the Files section at:
http://groups.yahoo.com/group/CenTexComm/files/

austin.p96
Pro-96 Data File You must have Win96 from www.starrsoft.com
to use this file. You run that program and open this data file.

Save it to your computer and load up the Win 96 program (you get a free 30 day trail if you haven't tried it before)
and open the austin,p96 file that you downloaded and try loading that onto your scanner. You can always change it back to what you had as long as you save what you had loaded on there first.

I do not use any V scanner or auto dump files since you are liable to fill your whole radio with just the first 50 talkgroups which will be convention center and water/wastewater.

Your radio may need the 2 on-line updates (available on-line, and via the Radio Shack stores, which I recommend, since they have the connectors) and the firmware update for the 9600 baud that the digital systems use. This means your scanner must make a trip to Ft. Worth for the free upgrade.

I don't recall the upgrade numbers, but (after convincing the clerk that you are telling the truth) the on-line upgrades only require a few minutes. The firmware upgrade requires 2-3 weeks.

2956. Re: Pro-96 and Pro-2096 & the Austin/Travis County System

You can find information about the upgrades on the Pro-96 Yahoo group. The following are a few reference messages from that site.

Messages 674, 3198, 4166

It's on the RS site:

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?P=&D=soft&T=htm

(that's gonna get chopped and look ugly - you'll have to copy/paste)

It's # 200-0526, about 10 from the top of the list.

2957. Uniden Announces BCD996T Industry's First GPS-Enabled Scan ner replaces the BC796D; base version of the BCD396

Yahoo group: CenTexComm
Date: 2005-10-03 05:59:26 UTC
From: Robert
Topic: 2957 Message: 2957

Uniden Announces Industry's First GPS-Enabled Scanner

New Mobile Model Features Close CallT Technology and APCO 25 Capability In a Desktop Design

Fort Worth, Texas, September 1, 2005 - Uniden America Corporation, a leading manufacturer of wireless consumer electronics, today announced a new mobile digital scanner, the Bearcat BCD996T. This model introduces the first-ever GPS-enabled scanner, allowing the product to automatically select nearby radio systems for scanning. The BCD996T also offers APCO 25 digital capability, allowing consumers to monitor the activities and signals of city and government service departments, and features advanced scanner technology in an in-dash or mobile mount design.

The GPS-enabled feature offered by the BCD996T provides automatic system selection, which permits the scanner to turn system reception on or off depending on the user's location, and allows the user to define the scanner display to show location-based information.

In addition, when a GPS unit, not included with this scanner, is connected to the BCD996T, it will alert at areas of special interest, such as dangerous intersections, school zones, or general points of interest.

Featuring APCO 25 capability, Uniden's BCD996T is poised to further enhance Uniden's offerings to public safety and increase interoperability between agencies using different types of radio systems. Uniden's BCD996T will not permit users to monitor sensitive, encrypted signals from national and local security services.

The Bearcat BCD996T also offers Close CallT RF Capture Technology, Dynamic Memory Management, Fire Tone-Out, and Multi-site programming as well as 6,000 channels and a frequency range of 25 MHz to 1.3 GHz (excluding cellular and UHF TV frequencies). This new model is slated to hit retail shelves in spring 2006 and carries a MSRP of $849.99.

"The BCD996T, the first GPS-enabled model in the scanner industry, is another milestone in the evolution of scanning," said Paul Opitz, product manager at Uniden America Corporation. "These new features will provide an efficient way for agencies that need compatibility in multiple geographic areas to use the scanner without having to reprogram the equipment for each location."

About Uniden

Uniden America Corporation, the North American subsidiary of Japan-based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, VOIP telephones, Bearcat® scanners, FRS/GMRS radios, marine radios, CB radios, and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells its products through dealers and distributors throughout North, Central and South America.

2958. Fwd: Cool BC780 mod!

Yahoo group: CenTexComm
Date: 2005-10-03 21:54:21 UTC
From: Myles
Topic: 2958 Message: 2958

I sent this email out over three years ago. Doesn't look so silly now.

--- In HoustonScan@yahoogroups.com, "Myles Barkman \(work\)" <kg5ai@e...> wrote:
Was up late last night and figured out a cool mod for the Bearcat 780. Looking inside the unit, it appeared to have all the workings of a GPS unit but it wasn't activated.
I found a green wire and clipped it, and this is what it can do now:
The scanner can now tell where you are and automatically scan all the trunked public safety systems in a 10-mile radius of your location as well as conventional public safety frequencies!
As an extra unexpected bonus, it automatically can pull the data from the trunk site computers and displays the true alphanumeric tags as they are displayed on the radios used by the Sheriff's Department and other users.
I was thinking that this was the coolest thing ever but that with all this new stuff, 500 channels would not be enough for everything I could hear now.
Not a problem. I solved this by taking the CPU out of the scanner and turning it around 180 degrees.
This gave me 10 times the number of channels and talkgroup capability.
I would strongly advise NOT to do this mod yourself unless you are familiar with surface mount technology and have the proper equipment and training to deal with small parts.
You will most likely destroy the radio if you try this.

Perhaps the folks at the Harris County Communications Technology Center would be so kind as to offer their services by doing this for people. I'm sure that they want as many people to be able to listen into their system and know what all the talkgroups are. They might even clue you in to future talkgroups and do the mod that will let your scanner monitor digital systems. I haven't figured this one out and probably won't look into it until next year. I have too much to play with as it is now!

Sent: Saturday, October 01, 2005 13:27
To: CenTexComm@yahoogroups.com
Subject: [CenTexComm] Pro-96 & problem with Austin/Travis County System

My new Pro-96 has a problem with the A/TC system. Imagine, if you would, someone talking, but at irregular times and frequent intervals, a syllable or syllables got dropped. The sound would be very choppy and difficult to understand, right. That's what the Austin system sounds like.

I loaded the TX/LA system info from the V-folder.

I've not changed any other settings from the defaults.

The LCRA and Williamson Co. systems are OK.

Here're the particulars on the scanner:

S/N: C027297
CPU: 1.3
DSP-APP: 1.2
DSP-VOC: 1.0.

Your suggestions are very welcome. If I can't get this taken care of, the scanner goes back next week.

Thanks for your time.

From: commscan
Topic: 2969 Message: 2969

Hi All,

I'm listening to the Gulf Coast Hurricane watch Net this morning on 14325 kHz. It's been relatively interesting. One thing I have been hearing on this net but not seeing on any of the network news stations this morning is the tornado activity in Florida. The NWS and NHC (as well as local storm spotters/SKYWARN personnel) have confirmed a few tornados that have touched down in Florida. Since the hurricane is hitting now, this would be a good time to listen if you're able to. Propagation isn't great in N. Texas but it is decent .

2970. Aurora Colorado Reverts BACK To Analog From Digital

Yahoo group: CenTexComm
Date: 2005-10-24 20:47:58 UTC
From: Robert
Topic: 2970 Message: 2970

Let's hope this is a trend that will continue.

Let this be a message to Williamson County, If it's not broke, don't fix it.

Aurora, Colorado sidelining troublesome digital police radios
Wednesday, October 19, 2005

Aurora | The police will be switching their radios, again.

Despite months of tinkering with the $12 million radio system and bringing in consultants, the city is still unsure what has caused the system to drop and garble calls.

The police plan to switch from M/A-Com's digital radios to the old analog system.

"Right now the system is not very good, so we think it will be an improvement," said Don James, president of the Aurora Police Association. Over the past year, the digital system has caused officers to miss calls and have trouble communicating with each other and the dispatch center.

"We've tried a bunch of things and it hasn't completely cleared it up," said Mark Pray director of information technology for the city.

In May, city officials said the radio system was operating at a 99-percent success rate, and the remaining problems could be attributed to interference from cell phone towes. The city hired Colorado Springs-based Pericle Communications to investigate why the 800 MHz system was dropping or garbling 2.4 radio transmissions a day. Pericle could not find the cause but did conclude cell phone tower interference was insignificant. The consultants also said the fundamental design of the digital system was sound.

The study observed 2,044 instances of interference on one channel during a 24-hour period, making the frequency useless for a total of 65 minutes a day and giving any call a 10.6 percent chance of being garbled or dropped during the busiest hour of the day. The study recommends M/A Com replace antennas and reexamine its digital system while police switch back to an analog radio system.

The $47,100 study and any repairs to the digital system will come out of the remaining balance on a contract between M/A-Com and the city.

Pray said the city is unsure when the digital system will be working.

James said switching back to analog wouldn't be a problem for police officers already familiar with the system but reconfiguring almost 1,000

radios would be a hassle.

City council will discuss the radio system at its informal session on Monday.

2971. 396T In Austin Texas

Yahoo group: CenTexComm
Date: 2005-10-29 20:41:07 UTC
From: josephsdavis13
Topic: 2971 Message: 2971

I live in Austin Texas and have a BCD-396T also and I am wanting to talk with others in Austin concerning the BCD 396T radio.

I have not had any problems with the battery charging. However, I am curious as to how well radio is performing in Austin on the digital APCO P25 network. Currently I have version 1.7 firmware install that came with the radio. I have had my radio for about 5 days now and I programmed the radio using the BCD396T program software form Uniden's web site. So far this software for the Austin Area works well and I am receiving a lot of information. I did have to make some adjustments to the AGP and squelch and auto P25 settings for better radio performance. Can you please share with me about any problems that you have had and what are some things that I might want to lookout for.

Thanks

josephdavis13

San Antonio/Bexar County has an EDACS system, but they encrypt the
control channel. SAPD is on the "Blue" system exclusively, so you can
scan the system conventionally. Many of the surrounding counties are
scannable.

I don't know what the future holds for the area, so I don't know if I
would suggest buying a digital scanner.

From: Myles Barkman
Topic: 2975 Message: 2976

You won't find anything in the FCC database under 450.025. The signal is on 450.020 MHz.
Similar signals are on 450.010, 450.980, 450.990, 455.010, 455.020, 455.980, 455.990 MHz.
They are called TSL, Transmitter-Studio Links. It is data being transmitted from the broadcast transmitter, back to the studio.
Check here for more about TSLs:
http://en.wikipedia.org/wiki/Transmitter-studio_link

Thanks for the info Myles. Would you happen to know the protocol and
baud rate of the signal?

Interestingly, I searched 450.000 to 451.000 and no listing with FCC.
I would think TSL's would need to be licensed.

tnx
Bruce

I think you can also find some of these signals around 950 mhz. Some of them can be voice.

Sure they are. Not sure what search engine you are using, but just type in the following freqs and do a TX state search using this search site: http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/freq_st.hts

2980. check lists for additions or corrections

Yahoo group: CenTexComm
Date: 2005-11-16 23:18:05 UTC
From: Myles Barkman
Topic: 2980 Message: 2980

Going to be taking a trip from Houston to New Braunfels and Fredericksburg areas shortly.
Wonder if anyone in those areas or in-between can check the lists I have and offer any corrections or shed some light on some questionable entries.
One list is for the trip to New Braunfels:
(Added as attachment since it's not on my webpages)
If attachments are not allowed, I'll add it in some files section.

One list is for the New Braunfels area:
http://home.houston.rr.com/freqzone/freqs/newbraun.html

The last list is for the Fredericksburg area:
http://home.houston.rr.com/freqzone/freqs/fredburg.html

Thanks for any and all help.

2982. Austin Police Association Press Release

Yahoo group: CenTexComm
Date: 2005-11-19 00:56:45 UTC
From: Robert
Topic: 2982 Message: 2982

This could all get very interesting. The radios are quiet so far. No extra surveillances going on.

From: http://www.austinpolice.com/

Austin Police Association Press Release

Austin Police Officers are gravely concerned with the termination of Officer Julie Schroeder. The Officers of the Austin Police Department knew Chief Knee would respond to the loudest critics of the Department and this incident proves Knee is a weak chief.

This incident has also proven we have created a kangaroo court with the Citizen Review Panel. The CRP lost its credibility when information was illegally leaked to put political pressure on a weak chief.

This incident has forced Chief Knee to respond to the critics not on the facts, but based on political pressure.

This action today by Chief Knee proves what we have long suspected: that he no longer has the heart, guts or backbone to defend those in uniform who constantly face violence and death at the hands of wanted criminals and dangerous, armed, drug dealers. Today's firing has literally removed the last vestige of confidence that the rank and file had in their leader.

When Julie Schroeder fired her weapon, she believed that not only was her life in danger but that of her fellow officer.

This is the last in a long string of injustices that we will accept from this chief. We are tired of seeing careers and lives ruined as this administration leaves another police officer hanging out to dry. Instead of making political threats and rattling sabers I will say that this union has no place left for the proper respect that should be due to the Austin Chief of Police.

It is our duty from this day forward to work toward one goal: the removal of Stan Knee as Chief of Police in Austin, Texas.

Austin Police Association wants your opinion:
1. Do you approve of Chief Stan Knee's overall past job performance as APD Chief of Police?
YES, I approve NO, I disapprove
2. Do you agree with Chief Stan Knee's decision to terminate Officer Julie Schroeder after the Rocha incident, despite the Internal Affair's investigation findings that she was not in violation of APD Policies,
as well as being cleared by a Grand jury in this case?
YES, I agree NO, I do not agree

2985. Having trouble monitoring LCRA; not following talkgroups

Yahoo group: CenTexComm
Date: 2005-12-05 03:05:09 UTC
From: Robert
Topic: 2985 Message: 2985

I'm wondering if LCRA hasn't changed some of their towers. In the Austin area with Austin tower (near Westinghouse Rd going to Georgetown) and the one by Lago Vista, I'm not able to follow the talkgroups. I've tried both the Radio Shack Pro-96, Pro-2096 and the Uniden BC296D. I'm hearing them sometimes and other times it is not following the trunking. I'm thinking they are either not using all the frequencies or perhaps may have added some. Also i'm hearing what I know is Capitol Metro showing up on other talkgroups so I know it's not following it correctly. Is anyone else having problems?

2987. Any Unusual Airband Activity This Afternoon?

Yahoo group: CenTexComm
Date: 2005-12-06 03:38:45 UTC
From: Phil
Topic: 2987 Message: 2987

On the way home from work tonight (approx. 5:20PM) I watched two 747's, flying really close to each other high over north Austin. Through the binoculars, the leading aircraft seemed to have the same paint scheme as Air Force One, the other a plain white paint scheme. Left the scanner at home (typical) so not sure if they were active it all. It was a pretty neat sight, as both a/c's left some nice contrails.

Anyone pick up anything?

Robert,

This is one of the problems I have been trying to solve for one of the wrecker guys.

Does TCSO Charlie come out on any crosslink? If so, what is it?

Any truth to the rumor that they dispatch Charlie on the Baker talk group?

Thanks

russell

From: Robert
Topic: 2036 Message: 2990

I'm not sure why TCSO moved off Baker Talkgroup and onto the Charlie talkgroup for all Eastside units
The west side is still on Adam and simulcast on 155.310. The Charlie talkgroup does not have a simulcast VHF frequency.

It's now almost 9pm and road conditions are getting worse. Cars are starting to roll and they can't get the big heavy ambulances to the scenes.. Lots of screaming on the radios. very interesting. Please be careful out there.
DPS just said that San Marcos has 15 accidents from Mile marker 215 to MM 218. Lots of TxDOT traffic on LCRA talkgroups.

Yahoo group: CenTexComm
Date: 2005-12-10 14:52:21 UTC
From: Aaron Slaughter
Topic: 2985 Message: 2992

Any updates on this? I've been listening to the Creedmoor site this morning from Lockhart and I get traffic on the LCN1 - 5, but after that, my scanner (pro-94) attempt to scan and lock on a channel, but I don't get any audio. I'm trying to search manual, but kinda hard keeping up the channels.

I agree with Robert, seems they have either changed frequencies or changed the LCN on the sites. I don't have a radio or scanner with the capabilites to run etrunker to look into this. Is there anyone around that can run etrunker to see what is going on?

From: Robert
Topic: 2985 Message: 2993

Actually I fixed my own problem on the LCRA system.
when monitoring with a Radio Shack Scanner Pro-9x Such as the Pro-96
The frequencies have to start in channel 01 and cannot start in channel 00 and must then be in the correct order.
For some reason, the first channel in each bank starts with 00 and you just have to put in a conventional frequency into that bank such as 154.950. I made the correction and seem to be hearing them ok. If you are still having trouble, go back and listen to the last several frequencies in each tower to make sure they are being used. If you suspect they are not being used then try locking them out and see if that makes a difference.

I also tried to put several towers in the same bank, knowing that I couldn't hear both on the same pass but that didn't work either because (back to the above) the first freq had to be in the 01 slot.

I am looking at buying a radio shack pro 2051 trunk tracking scanner for a christmas present.
Is this one a good choice?
They are going for $150.00 at the shack.

I have two Pro-95 and I'm very pleased with them. That is what I
used exclusively before Austin went digital.

I bought them about three years ago when the "Blank Looks Store" had
them on sale. One minor problem: The LCD has started to bleed a
little from the bottom.

Listening to San Antonio

During the past year 2004 it was stated that no scanner could trunk track the San Antonio EDACS ProVoice system to monitor all public safety and city services communications for the City of San Antonio and Bexar County. All Police, Fire, EMS, SO, etc operate on this system. Since the development if the Uniden BCD 396T, can this scanner monitor this EDACS ProVoice system?

Radio Reference shows a site 109 for American Electric Power EDACS System in Columbus. It also shows 855.3375 as an American Electric Power and Light licensed frequency in Columbus, but the nearest other stations on 855.3375 are in Beeville and Refugio. The LCN might have changed for this TRS site. Just my guess though.

Date: 2006-01-02 06:40:51 UTC
From: Russell Adams
Topic: 3006 Message: 3006

How does Austin FD handle fire ground comms? Do they use simplex freqs? What freqs are associated with Dir 16? I also see Dir 14 & 15 under Zone F. Anybody got a typical scenario where units arrive on scene to fight a multi-alarm fire? For example, first units on report size-up (on FireCom X). They request additional alarm(s) on ___? They are assigned a command channel ____? Is staging on a separate channel? How the FF's inside talk out? Is the trunked system suitable for the short range comms?

What happens if a second incident occurs simultaneously? Are there enough simplex channels available, if any? How do they keep from interfering with each other? Please lay it out for me.

Thanks,

Russell

From: russell stanphill
Topic: 3007 Message: 3008

Mike,

This is exactly how I have programmed my scanner for use with the Austin system.
Enter the same control channels in each bank. Set the bank for closed mode.
Enter the APD talk groups in bank 0, the AFD talk groups in bank 1, etc.
Then you can quickly select which operation you want to listen to by hitting the bank number to include or exclude it from the scan.

To save you a lot of typing, I will be happy to email you my file or meet with you to upload your scanner. Contact me off group at my email address.

Did you ever get an answer to your questions? AFD is supposed to run Fireground operations on B1 with them using B2 as staging.. so the next big alarm will be on B3 using B4 as staging.. so you may hear most of the primary traffic on the odd numbers B channels. Also, supposedly the "command post" and dispatch is supposed to monitor the "safety" talkgroup in case someone gets into trouble (but I have never heard anyone use it at all) Then they are also supposed to monitor "Dir 16" which is supposed to be Direct - not using the trunked system. I also have never heard this used on a fire scene. In fact, I have never heard any of the agencies using direct frequencies at all. Let me know if you ever do hear anything. It does seem to work ok for them using the system on the fireground. What I haven't quite figured out is how they do the Metro North and Metro South, which is supposedly county units I guess. or Firecom N or Firecom S which are supposedly patched and being used by the city units. I live north and all I ever seem to hear is traffic on Firecom North and never on Firecome South, so I'm not sure how that happens. I also do not know what Direct 14 and Direct 15 are for.

3019. Is the pursuit worth it?

Yahoo group: CenTexComm
Date: 2006-01-19 04:25:42 UTC
From: Trebor1159
Topic: 3019 Message: 3019

The pursuit went on for about an hour and was carried live on Houston TV. They have to make the decision if they are gonna stay and pursue the vehicle or just break off.. Considering they had helicopters, the safe thing to do would be to let the helicopter watch the suspect and BACK OFF and let the suspect get stopped somewhere and then move in take him down.
I don't see the point of aggressively chasing him for an hour endangering other motorists. This particular pursuit ended up in a head-on collision with a passenger vehicle with an infant on board. The driver of the passenger vehicle also had to be transported. Was the hour long pursuit necessary?

Last Thursday a vehicle was car jacked here in Austin. The suspect displayed a weapon and took the vehicle. It was spotted a short time later and APD aggressively pursued the vehicle (since the driver was known to be armed) They even launched STARflight (Air 1 is never available) to call the pursuit supposedly using the method previously described. But Commanders decided to terminate the pursuit before STARflight could get over the vehicle. Then the next night, Friday night, the same vehicle was spotted again and APD started the pursuit again. Again they called STARflight and again terminated the pursuit before the helicopter could spot the vehicle. In fact, STARflight was within 30 seconds of being over the vehicle when they were told to cancel. Why did they keep doing this and calling the helicopter and then changing their mind? If they call the helicopter, then perhaps they should know what they want the helicopter to do and let them get in place before they call it off. Otherwise make the decision that it's just not worth the danger and not pursue the vehicle at all.

Anyone could watch this pursuit that occurred in Houston today and perhaps decide that it could have been done much safer. The Houston police officers did not have good things to say about what happened today and said had they been allowed to run him off the road, then they would have ended it much sooner than it did. It's a good opportunity to sit down and look at it and decided what could have been done better. I think using the helicopter is a great idea, I just wish they would follow through with it and do it correctly. I don't see any reason to continue it for over an hour.

The suspect also went through a tollbooth and it seems like they could have stopped it right there by stopping all the cars at the tollbooth and basically block the freeway (toll lanes) that way. I'm sure if it went on that long and through 3 counties there was massive communication problems in that Houston Police might not have the capacity to talk to the toll road people or to DPS or any of the other agencies.

Although it was incredibly interesting to watch, I just don't think the pursuit should go on that long. They should learn that the helicopter can be put to use to stop the vehicle without having the suspect get into high speeds or dangerous driving. I'm more worried about the cops all trying to get there first. You have to decide how imporant it is to get this car stopped. Are you willing to risk other injuries? are you willing to do what DPS does and bump him to get him to spin out. or ram him like I have seen DPS do. shoot the tires? It all seems very dangerous. so If you aren't willing to do all that.. then perhaps the best move is to back off and let the guy go. That is not what happened in Houston today.

Topic: 3019 Message: 3022

There were several chances to stop the pursuit and in fact if you happen to have seen the video when the suspect was turning around on the SW freeway to go down the entrance ramp a HPD Vehicle is seen stopping so the suspect can drive down the up ramp. IF he had continued there would have been a collision between the HPD vehicle and the suspects vehicle at less than 30 MPH. The head-on with the inocent people occured less than 100 ft away at a higher speed.

The chase was started by Harris County, and involved Montgomery County (dark pickup with camper), TX DPS, and City of Houston.

I never understand the complaint regarding communications. The dispatchers for each agency were communicating with each other. The supervisor's were communicating. You want the individual officers to communicate with each other? You will have chaois on the radio when that happens. Each will want to be in charge and each have different radio procedures. It's best to leave well enough along and let the supervisors and dispatchers communicate.

Each agency involved with the chase except for possibly Montgomery county have 800 trunked radios. The City of Houston has the ability to patch to the 800 trunked. The City of Houston Helicopter has a Harris County trunked radio. Texas DPS has a Harris County trunked radio.

A shotgun out the side window of a Police car would have stopped this chase within minutes. Ramming the car into the K-wall of the freeway would have stopped this chase. As long as the pursuits make the news they will continue and most likely increase in numbers. Civilians getting injured if an officer makes a bad decision on when to become agressive. Usually the chase will end in a crash anyway and someone does get hurt. It's better to chose the when rather than wait for the when.

One thing I noticed is that the chase proabably would not have ended where it did if the "innocent victim's" car had not been tailgating the guy in front of him. From the position (very close and to the left) the "innocent victim" was trying to rush the car in front. Most collisions happend because someone isn't paying attention.

Just a heads-up if anyone is interested. On Jan 29, 06 at POK-E-JO's, 2121 W. Parmer Ln. 6:00 PM, there is going to be a gathering of people that are interested in monitoring scanners. (police, SO, fire, ems, & ect). There will be stories told i'm sure and frequencies exchanged. This is the first time to try a gathering that some of us are aware of, so not sure what to expect.

If you or someone you know might be interested, pleas show up.

PS: Radar we need you cause: "YOU THE MAN" when it comes to knowing frequencies and talk groups!

*** Radar is better known to us as Fireman Mikey

3034. Del Valle Question?

Yahoo group: CenTexComm
Date: 2006-02-21 14:41:55 UTC
From: commscan
Topic: 3034 Message: 3034

Hi Group,

I have a quick question. Is the city of Del Valle have its own police department or is this part of Austin PD's turf) or jurisdiction). I looked online to try to find out but haven't had much luck. Is there a website that lists the cities covered by Austin PD, or for that matter, Travis Co. SO? I'd really be interested in knowing who has their own PS officials and who is covered by Austin or TCSO. Thanks .

Del Valle is unincorporated, but is being rapidly annexed by the City of Austin. In the annexed areas, Austin PD and FD handle emergencies. In the unincorporated areas, TCSO provides law enforcement and Travis County ESD #11 (known as Travis County Fire/Rescue, formerly SETCO) provides fire protection. All of Travis County is covered by Austin/Travis County EMS for EMS response.

Which other communities were you wondering about?

3036. Del Valle

Yahoo group: CenTexComm
Date: 2006-02-22 07:51:15 UTC
From: David Litsinger
Topic: 3036 Message: 3036

At one time several years back, the Garfield area of Del Valle was incorporated, but found it was too expensive and too much bother so un-incorporated. FYI, the DV school district covers just about anything east of I-35 outside the city of Austin, all the way down to Hays County LIne, and some area north of the river along FM969 east past weberville. Also FYI, some of the Del Valle mailing area and addresses are actually across the county line in Bastrop Co (east along FM812 - Jacobson Road around FM2430 area). Have a friend that lives out there in Bastrop Co, and has a DV mailing address, and 247-xxx phone number which is also DV. Some of the fun part is trying to remember how far out on which road is incorporated into Austin, and what isn't.
Dave.

Not correct. The part of Travis County that's in the city limits of Elgin
is covered by Metrocare EMS as per the contract with Bastrop County and the
cities of Elgin, Bastrop and Smithville. Everything *else* is A/TC EMS.

Mike :)

3038. Radioreference.com question

Yahoo group: CenTexComm
Date: 2006-02-22 22:35:46 UTC
From: John Mayson
Topic: 3038 Message: 3038

I thought I would try the friendly confines of CenTexComm before tossing this on the RR forums. :-)

On a typical EDACS Analog/Pro-Voice TRS listing there's a column in the talkgroup section for mode. I see modes such as: D, M, A, etc. What do these mean? I guess "D" means digital, but what about "M" and "A"? I'm programming my scanner for Oklahoma City and don't care to program in talkgroups I can't hear.

John

If you scroll your mouse over the top black bar (DEC, AFS, MODE, etc...) a pop up will appear with the description of each mode

ie. D=Digital, A=analog, M=mix digital/analog, E=encrypted, X=analog encrypted

John Mayson <jmayson@...> wrote:

Trebor1159 <trebor1159@...> wrote:
Did you ever get an answer to your questions? AFD is supposed to run Fireground operations on B1 with them using B2 as staging.. so the next big alarm will be on B3 using B4 as staging.. so you may hear most of the primary traffic on the odd numbers B channels. Also, supposedly the "command post" and dispatch is supposed to monitor the "safety" talkgroup in case someone gets into trouble (but I have never heard anyone use it at all) Then they are also supposed to monitor "Dir 16" which is supposed to be Direct - not using the trunked system. I also have never heard this used on a fire scene. In fact, I have never heard any of the agencies using direct frequencies at all. Let me know if you ever do hear anything. It does seem to work ok for them using the system on the fireground. What I haven't quite figured out is how they do the Metro North and Metro South, which is supposedly county units I guess. or Firecom N or Firecom S which are supposedly patched and being used by the city units. I live north and all I ever seem to hear is traffic on Firecom North and never on Firecome South, so I'm not sure how that happens. I also do not know what Direct 14 and Direct 15 are for.

Subject: [CenTexComm] Austin Fire Ground Comms

How does Austin FD handle fire ground comms? Do they use simplex freqs?
What freqs are associated with Dir 16? I also see Dir 14 & 15 under Zone F.
Anybody got a typical scenario where units arrive on scene to fight a
multi-alarm fire? For example, first units on report size-up (on FireCom
X). They request additional alarm(s) on ___? They are assigned a command
channel ____? Is staging on a separate channel? How the FF's inside talk
out? Is the trunked system suitable for the short range comms?

What happens if a second incident occurs simultaneously? Are there
enough simplex channels available, if any? How do they keep from
interfering with each other? Please lay it out for me.

Thanks,
Russell

3041. what equipment i need to listen to the APD, fire, etc on their new trunking system

Yahoo group: CenTexComm
Date: 2006-02-24 15:17:51 UTC
From: Robert
Topic: 3006 Message: 3041

This includes the Uniden BC296D (handheld) and the BC796D (base) radio at about $520 each. You can easily do a search on the web (including www.ebay.com <http://www.ebay.com/>) for these radios

One of the Uniden vendors is www.usascan.com <http://www.usascan.com/>

Radio Shack carries the Pro-96 (handheld) @ www.radioshack.com <http://www.radioshack.com/> and search for the Pro-96 which essentially does the same thing as the Uniden handheld. Both have good and bad features. The Uniden has a total of 1000 channels that you can scan at one time, and it's price includes a battery pack that you pretty much have to deal with, the A/C adapter and limited programming software and a cable. The Radio Shack Pro-96 sells for $499.95 and that price doesn't even include the 4 AA batteries that you will need to run it with or an A/C adapter, the programming cable 20-289

http://www.pro96.com/

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&site=search> &category%5Fname=&product%5Fid=20%2D289&site=search)

https://www.greamerica.com/shop/cgi-bin/cp-app.cgi?pg=prod <https://www.greamerica.com/shop/cgi-bin/cp-app.cgi?pg=prod&ref=SCAN001> &ref=SCAN001

or software (http://www.starrsoft.com/software/win96/default.asp) but at least it does use regular batteries and not a battery pack. Regardless of what radio you get, you will need a good antenna. The ones that come with the handhelds are not that great. I recommend Radio Shack Catalog #: 20-283 (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG <http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-283> &product%5Fid=20-283) for $14.99. It is very distinctive and has 800 Mhz printed on the side of it in Orange.

The Radio Shack Pro-96 also has a necessary software upgrade that will have to be done if it is not already loaded onto the scanner. It can be found at:

http://www.radioshack.com/images/ProductCatalog/Manuals/2000526_DL_instructions.pdf

INTERESTING! Were are you located?
I know of a Tom Green Street here in Austin, though I can't imagine
what the LCRA would be doing there...
Have a relative in the LCRA who tells me that repeaters are
everywhere so it may be that it was one of those repeating a distant
communication...

3048. New Uniden BC296D User Needs Help with Entering Frequencies

Yahoo group: CenTexComm
Date: 2006-03-04 18:38:38 UTC
From: silly31freak
Topic: 3048 Message: 3048

All,

I have a Uniden BC296D that is a couple years old. Shortly after I got it, I went to a CenTexCOMM get-together at Whole Foods in North Austin, and one of the attendees was nice enough to upload all his frequencies from his 296D scanner into mine. Although it seemed to worked fine and has served me for many months, it did nothing to teach me how to program my scanner on my own.

I live near Buda, so am interested in Hays County mostly, but also Travis/Austin county scanning.

Anyway, I am in teh process of making updates to my frequency and talk group entries. Using www.radioreference.com, I see many listings for systems near me (LCRA EDACS and Austin/Travis County Motorola Type-2/APCO-25 seem to be the most prevalent) that I want to progrma in to my scanner.

I am using the Uniden Bearcat software that came with the scanner, which seems to be much better than trying to enter things using the scanner keypad.

I have a few questions for teh experts out there to get me started on my quest.

1) For a particular trunking system, e.g., LCRA EDACS, Austin/Travis County Motorola Type-2/APCO-25, etc., do I need to enter multiple sites if I am scanning from one location. For instance, the LCRA system has a 914 Creedmoor site and a 915 Austin site. Do I need to enter both sets of frequencies? Do all the talk groups come through on both systems? Is there an advantage to enterning multiple sites (possibly in multiple banks)? If I use different banks for the two sets of frequencies (Simulcast 1 and Simulcast 2 for example), do I need to enter all the the talk groups into each bank as well?

2) Is there a particular order I need to input the frequencies? I see red primiary control channels, blue secondaary control channels, and other frequencies with no designations.

3) If I find conventioal scanner frequencies that are also listed on the trunks systems, do I need to enter them as well?

4) Nay other ideas/suggestions wuold be appreciated.

Thanks for your time,

Mark

3051. Help with BC296D using supplied Software and how to program in general

Yahoo group: CenTexComm
Date: 2006-03-04 23:55:05 UTC
From: Robert
Topic: 3051 Message: 3051

I have uploaded the data file for the original BC296D/BC796D SSD into http://groups.yahoo.com/group/CenTexComm/files/. The file is called AustinTRS.ssd

Load it up and look over the settings. You will notice that the settings show CC Only Mode: and is set for Plan2. This is what Austin uses, so with this setting in place, you only need to program the one "buzzing" control frequency for each tower. It has been very consistent over the last several months. The control has not changed among the towers. For Simulcast 1 towers, which are mainly in the Austin city limits, the control has been 866.2875 for awhile now. However notice on <http://www.radioreference.com/modules.php?name=TRSDB&sid=2&d=trsinfo&opt=all_tg> that there are alternate control channels that It could switch to. So you have to enter the red ones and it strongly suggested that you enter the blue backup ones. You do not need to enter the black ones but I did anyway just in case. Motorola systems such as the Austin/Travis Co system don't have to be in any certain order but It is recommended that you put the red control channels first and the blue ones second.

For the Simulcast 2 towers which are mainly in Travis County (outside of the city) the control channel is 866.1375. I recommend you put these two sets in different banks as different systems have some similar and some different talkgroups and you will receive them equally as strong. For instance, all the water/wastewater and Convention center talkgroups, are only on the simulcast 2 sites and not on Simulcast 1 sites.

The other towers: Marble Falls, Honeycomb, Burleson Manor, USGS Shingle, Bastrop Co, Fayette Co, Creedmoor and possibly Davis (which is not currently being used) are called Intellirepeaters and will only repeat traffic if radios are in those areas and need help due to not receiving the Simulcast 1 or Simulcast 2 sites. The radios are programmed to first look for their "home" towers, either Simulcast 1 or Simulcast 2 and if It can't find them, it will go and look for Intellirepeaters. So the intellirepeatrs will only have limited radio traffic but it's at a slower baud rate so it will be much clearer. In the program, I put all the Intellirepeater sites into one bank so my scanner will do what their radios will do - that is just to find the strongest control channel and give you that tower. As an example you will probably hear a lot of Mustang Ridge and Travis Co Sheriff units on the Creedmoor Intellirepeater since those radios tend to be in the Creedmoor area and may get that stronger than the regular Simulcast sites.

Hays Co is on the LCRA system which is EDACS. I put that in Bank 10 so you can go in and put in the tower closest to your area if it's not already there. I'm not sure, but I think you have to have a non trunked frequency between each set of tower frequencies (perhaps someone can clarify). Also, in and EDACS system, the frequencies have to be in order. So be very careful and program them in the same order they are listed in: <http://www.radioreference.com/modules.php?name=TRSDB&sid=48> In other words, the San Marcos tower has 10 frequencies, put them in the exact order that they are listed.

The conventional frequencies are NOT part of the trunked system and must be entered separately, along with any other regular frequencies you want in that bank such as 155.865 for Hays County.

Good luck, let me know if you have any questions,

Robert, and yes I was at the HEB Central Market that day.

3052. LCRA in Bell Co ?

Yahoo group: CenTexComm
Date: 2006-03-05 01:41:19 UTC
From: Robert
Topic: 3052 Message: 3052

I heard a rumor that TXU wants everyone off their system except for just TXU. That means no Fort Hood, no Medical helos, no Red Cross and definitely no TxDot. I think LCRA is trying to see if they can get some of that business, especially a statewide contract with TxDot. It's just a rumor so who knows. As for the LCRA system, the LCRA rangers are definitely interesting to listen to and especially their I-calls.

Programming and Monitoring of the LCRA with BCD396T

I am having problems hearing the LCRA on my BCD396T radio. I am aware the system is an EDACS systems.

When choosing a system should I choose wide or narrow? I am using the default LCRA program files that came with the radio. I live in Pflugerville and work in Austin, I am not able to hear any radio traffic on the LCRA network in either location.

Can anyone give me some ideas on what I might do to receive the LCRA on my radio.

Thanks

Joseph

3060. Programming LCRA Part II

Yahoo group: CenTexComm
Date: 2006-03-17 13:57:15 UTC
From: josephsdavis13
Topic: 3060 Message: 3060

Ok, thank you for this very important information. This explains a lot. I went to Radio Reference.com and it did not show what type of EDACs' system is was like I have seen on other EDACs systems, i.e. wide or narrow.

I have also heard that the system frequencies must be placed in order as listed on the Radio Reference page. Would you please confirm this. Also if there is anything else I should take into consideration for programming the LCRA, would you please explain this too. Thanks for responding to my email and posting.

One last question, which LCRA systems should I hear? I have noticed that they are a lot of them. I also know that they are great distances a part.

Thanks

Joseph

3062. LCRA System Files For BCD396T Radio

Yahoo group: CenTexComm
Date: 2006-03-17 14:28:08 UTC
From: josephsdavis13
Topic: 3062 Message: 3062

I am a BCD396T radio user. Currently I have been informed that the LCRA systems preprogrammed into the radio were miss programmed, i.e. they were programmed as narrow and should have been wide.

I see that I cannot change the LCRA system from narrow to wide without recreating all of the LCRA systems. This appears to have to be setup during the creation of the system not afterwards.

I have been looking at the ARC396 software for the BCD396T radio. The software seems to be more friendlier programming system and changes seem that they could be made easier. Are there any reasons that I should not use this software with the radio? Will I void the warranty of my radio with Uniden?

Also is they anyone that is using the Uniden software that has the LCRA files, for the BCD396T radio, that would send them me. This would a great help because I would not have to reprogram and reconstruct all of the LCRA systems from scratch.

Thank you

Joseph

3067. Programming LCRA Part II

Yahoo group: CenTexComm
Date: 2006-03-17 15:45:03 UTC
From: Robert
Topic: 3060 Message: 3067

If you are using a Radio Shack Scanner to monitor Edacs, such as LCRA (Pro-96, 97, 2096), the first frequency must be on Ch 01 in that bank.(not channel 00) . Also there can be only 1 tower's frequencies in that bank. If you have another tower, it will not work.

This is different from the Uniden Scanners. There can be multiple towers in the same bank, but the frequencies for each tower have to be in order. And separate each tower by a conventional (non-trunked) frequency such as 154.950 intercity mobile. I think this is right, let me know if I'm wrong.

The tower closest to Pflugerville is the "Austin" tower which is up off I-35 in Williamson County almost to Georgetown at Westinghouse Road.

915

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=915&d=trsinfo','height=375,width=500')> Austin

01 935.21250*

02 935.67500*

03 936.20000

04 937.20000

05 938.22500

06 935.17500

07 936.72500

08 937.75000

09 938.67500

10 939.75000

11 935.23750

12 936.97500

13 937.46250

14 938.41250

The Austin - Dobie is on Dobie Mall/Dormitory at MLK and Guadalupe. This tower was set up for Capitol Metro and that's mainly what you will hear.
903

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=903&d=trsinfo','height=375,width=500')> Austin/Dobie

01 935.72500

02 937.95000

03 938.20000

04 938.92500*

05 939.93750

06 935.45000

07 935.75000

08 936.18750

09 937.21250

10 938.98750

The Creedmoor tower is located way south between ABIA (Airport) and I-35 near Mustang Ridge. Since the LCRA headquarters is located off Ben White, they hit this tower the most and they monitor a lot of talkgroups so this is a good tower to monitor if you are in range.

914

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=914&d=trsinfo','height=375,width=500')> Creedmoor

01 936.48750*

02 937.92500*

03 938.42500

04 938.72500

05 939.72500

06 936.65000

07 939.38750

08 936.91250

09 937.43750

10 938.38750

There seems to be a tower in Westlake Hills but we don't know the frequencies. *** If anyone can give us any more information on this Tower please come forward.

904

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=904&d=trsinfo','height=375,width=500')> Austin Area

02 936.91250*

Finally, there is a tower in "Lago Vista". Well not really. It's actually in Cedar Park off Cypress Creek and that tower gets a lot of the lake traffic with rangers on the water.

908

<javascript:Start('modules.php?name=TRSDB&action=site_info&sid=48&site_num=908&d=trsinfo','height=375,width=500')> Lago Vista

01 935.25000

02 936.67500*

03 937.70000

04 938.70000

05 939.70000

06 935.13750

07 936.96250

08 937.67500

All the towers are listed at:
http://www.radioreference.com/modules.php?name=TRSDB
<http://www.radioreference.com/modules.php?name=TRSDB&sid=48> &sid=48

To: CenTexComm@yahoogroups.com
Subject: Re: [CenTexComm] Programming LCRA Part II

Yes, they must be programmed in order.

Program the towers closest to you.

In a message dated 3/17/2006 7:57:49 AM Central Standard Time, jdavis86@... writes:

Ok, thank you for this very important information. This explains a lot. I went to Radio Reference.com and it did not show what type of EDACs' system is was like I have seen on other EDACs systems, i.e. wide or narrow.

I have also heard that the system frequencies must be placed in order as listed on the Radio Reference page. Would you please confirm this. Also if there is anything else I should take into consideration for programming the LCRA, would you please explain this too. Thanks for responding to my email and posting.

One last question, which LCRA systems should I hear? I have noticed that they are a lot of them. I also know that they are great distances a part.

Thanks

Joseph

From: W. Wanner
Topic: 3062 Message: 3069

I have the software that came with the 396t .. how can i get them to you?

admin@...

josephsdavis13 <jdavis86@...> wrote:
I am a BCD396T radio user. Currently I have been informed that the
LCRA systems preprogrammed into the radio were miss programmed, i.e.
they were programmed as narrow and should have been wide.

I see that I cannot change the LCRA system from narrow to wide
without recreating all of the LCRA systems. This appears to have to
be setup during the creation of the system not afterwards.

I have been looking at the ARC396 software for the BCD396T radio.
The software seems to be more friendlier programming system and
changes seem that they could be made easier. Are there any reasons
that I should not use this software with the radio? Will I void the
warranty of my radio with Uniden?

Also is they anyone that is using the Uniden software that has the
LCRA files, for the BCD396T radio, that would send them me. This
would a great help because I would not have to reprogram and
reconstruct all of the LCRA systems from scratch.

Thank you

Joseph

Thank you for your offer of help. I went ahead and recreated the
LCRA Systems from scratch using the wide band system setup. It was
a lot of work, but I can now monitor the LCRA System successfully.
Thanks for your help, have a great day.

Joseph

3071. Using ARC396 Software to Program the Uniden BCD 396T

Yahoo group: CenTexComm
Date: 2006-03-19 16:35:06 UTC
From: josephsdavis13
Topic: 3071 Message: 3071

Considering the problems that I had trying to change the LCRA Systems from narrow to wide and that I could not make the changes in the Uniden provided software.

I am considering using the ARC396 programming software. I have down loaded the free trial software and it seems to be more user friendly with creating systems and editing them.

I am looking for some feed back from users of the software about their impressions of the software.

Thank you,

Joseph

3072. Re: [CenTexComm] LCRA System Files For BCD396T Radio

From: W. Wanner
Topic: 3062 Message: 3072

I wish someone would post a LIST of WHICH EXACT channels need to be "fixed" or changed... anyone?

josephsdavis13 <jdavis86@...> wrote: I am a BCD396T radio user. Currently I have been informed that the
LCRA systems preprogrammed into the radio were miss programmed, i.e.
they were programmed as narrow and should have been wide.

I see that I cannot change the LCRA system from narrow to wide
without recreating all of the LCRA systems. This appears to have to
be setup during the creation of the system not afterwards.

I have been looking at the ARC396 software for the BCD396T radio.
The software seems to be more friendlier programming system and
changes seem that they could be made easier. Are there any reasons
that I should not use this software with the radio? Will I void the
warranty of my radio with Uniden?

Also is they anyone that is using the Uniden software that has the
LCRA files, for the BCD396T radio, that would send them me. This
would a great help because I would not have to reprogram and
reconstruct all of the LCRA systems from scratch.

Thank you

Joseph

3073. LCRA System Files For BCD396T Radio

Yahoo group: CenTexComm
Date: 2006-03-20 02:27:37 UTC
From: Trebor1159
Topic: 3062 Message: 3073

I have no idea how the BCD396T works nor am I familiar with the software.
But with the BCD296T software you just go in and change the bank settings to EDACS Wide Band.

These settings are for any frequency or tower that is part of the LCRA radio System.

From: josephsdavis13
Topic: 3062 Message: 3074

The bad miss programmed systems that I had were for the LCRA systems in Texas. These preprogrammed files are in the BCD396T radios when they are shipped. I had no way of knowing they were not correct until I posted some requests for information about them on this group web page.

The real lesson learned for me was to check Radio Reference.com and make sure the information in the scanner is correct. I know of one other person here in Austin Texas that has this scanner and he is partially blind and is depending on me for help with programming his scanner. We had to move to the BCD396T's when Travis (Austin Texas) went digital APCO 25. But it has been a great learning experience.

Do you know of anyone with the correct information entered, or do I need to double check every austin entry to verify if it's correct.. I'm trying to get a datafile together to post up that says "EVERYTHING YOU NEED FOR APD SCANNING" and just have them download that and program it into the scanner.. i already have all of the talkgroups programmed into the scanner properly, and just that is a HUGE help, let me know if you have the programming correct in yours... thanks!

If you would like I can send you my BCD396T program files that I have for the Uniden UASD Systems files. All of these work well and I have corrected and program myself. I have the following systems programmed:

Austin Police
Austin Fire
Austin EMS
Travis County Sheriff
Williamson County Sheriff
Round Rock, Fire, EMS and Police
Georgetown, Fire, EMS and Police
Cedar Park, Fire, EMS and Sheriff
LCARs most that can be heard
Starflight and Hospitals
Austin and Pflugerville schools and buses
Austin Independent School District Police
Capitol DPS
DPS
Bastrop County
Smithville Police, Fire EMS
Caldwell County
Hays County
University of Texas Police and Fire
Capmetro on LCRA

I can also enclose a quick key list too.

3077. Austin Digital Help

Yahoo group: CenTexComm
Date: 2006-03-21 16:44:57 UTC
From: fendelhessi
Topic: 3077 Message: 3077

Hello,

I have a PRO-2096 and have been using it successfully to monitor the Travis/Austin digital system. No problems, until a few days ago. I hear nothing on the system now. Other analog and trunked systems in Austin work fine. My PRO-96 handheld is having the same problem. Any suggestions on what may have happened? Have the control channel frequencies changed?

Thanks,

Jim....

There has been no change on the system.. try to manually go to the buzzing control channel and make sure you are hearing it.. make sure the radio is receiving the signal.

I can receive the control channel OK. It is at 99% Everything looks
good but nothing is decoded.

Help.....

My only other suggestion is to check the bank settings and make sure it is
set for Motorola system

And to make sure the control channel (buzzing) is not locked out.

Also make sure your talkgroups are not locked out.

From: fendelhessi
Topic: 3077 Message: 3081

Robert,

Thanks for the suggestions. The problem was that the scanner was set up to decode off of channel 866.1375mHz. I had been using that frequency for several months because it was the strongest at this location. Apparently, the system operators decided not to use that channel any nore, even though there is still data on it. Once I switched to 866.2875mHz and re-orinetated the receiving antenna, the scanner came alive!

Thanks again,

Jim in Oak Hill....

3082. There are ** 2 ** main sets of towers used by this system

Yahoo group: CenTexComm
Date: 2006-03-22 05:38:04 UTC
From: Robert
Topic: 3082 Message: 3082

Well yes and no. You have to look at the Austin towers at:
http://www.radioreference.com/modules.php?name=TRSDB&sid=2

There are ** 2 ** main sets of towers used by this system.

The first one is called Simulcast 1 and the current frequency of the control channel is 866.2875 These towers are supposed to be located primarily in the Austin City limits and contain most of the public safety traffic but do not contain some of the other traffic such as Convention Center, Water/Wastewater, Jail operations, Austin Energy, and city Public works

The second set of towers are Simulcast 2 and the current frequency of the control channel is 866.1375. These towers are supposed to be located primarily outside of the city limits and contain a lot of non-public safety talkgroups such as Convention Center, Water/Wastewater, Jail operations, Austin Energy, and city Public works but also have some of the public safety ones too.

In order to get the FULL experience and not miss anything, you should scan BOTH sets of towers and this should be done in separate banks. If you put them in the same bank, the scanner will just go to the first control channel and do that one and will ignore the other one. You can lock out any talkgroups that you don't want to hear but realize that just because you locked it out in Simulcast 2 doesn't mean that you need to lock it out in Simulcast 1 because that agency may not even have their radios set to default to that other Simulcast system. For instance, all the Convention Center talkgroups are on Simulcast 2 so you will have to lock all of them out if you don't want to hear them, but you don't have to worry about them in Simulcast 1 because they are not broadcast off those towers. So if you programmed the radio yourself and set your own talkgroups you can take those out of the Simulcast 1 talkgroup as they are just taking up space and you don't need them. All of this: the control channels and the talkgroups could change anytime but as of right now, it's been that way for about a year now. Also the system sucks so bad reception wise that just moving my radio a few inches will make all the difference in the world so if you aren't picking up one of the control channels, move the antenna a few inches and see what happens.

Subject: [CenTexComm] Re: Austin Digital Help

Robert,

Thanks for the suggestions. The problem was that the scanner was set up to decode off of channel 866.1375mHz. I had been using that frequency for several months because it was the strongest at this location. Apparently, the system operators decided not to use that channel any nore, even though there is still data on it. Once I

switched to 866.2875mHz and re-orinetated the receiving antenna, the scanner came alive!

Thanks again,

Jim in Oak Hill....

3083. A request

Yahoo group: CenTexComm
Date: 2006-03-22 23:48:41 UTC
From: Glenn Morris
Topic: 3083 Message: 3083

When replying to a post, could you all please trim out the excess content to leave just the part of the post you are replying to rather than the whole past e-mail with advertizing too? It would make your replies and this list a lot easier to read.

TIA
Glenn

3084. RE: [CenTexComm] A request

From: Russell Adams
Topic: 3083 Message: 3084

You know, that's kind of funny. I actually prefer the "top post" method because the most recent response is at the top when I'm moving through the messages in my inbox. I don't have to scroll to the bottom to read the new message.

Russell

What Glenn said. :-)

Also it's easier if you don't "top post" that is put your response on the top. It makes it hard to follow the thread.

The downside of top posting is when someone answers a paragraph-long
question with a simple "yes" or "no" so that you have to scroll down
just to find out what the answer was about.

John - I'll take mine with a cherry coke.

Maybe John likes posting top-less.

Off topic penalty ... (and speaking of going top-less) ... anyone tried removing the antenna on their PRO-96 while in the area of Guadalupe and 29th while monitoring Austin / Travis County? Signal is so strong, you don't need an antenna.

3096. BCD396T Uniden Programming Software - Tone Lockout

Yahoo group: CenTexComm
Date: 2006-03-26 17:42:49 UTC
From: josephsdavis13
Topic: 3096 Message: 3096

BCD396T Uniden Programming Software - Tone Lockout

List below is Uniden's procedure for monitor PL tones, in the one and off positions. I would like to know if this is correct. I have seen in other programming software it would be the opposite, on to listen to PL tones and off not to.
I would appreciate some help with this question.
Tone Lockout
This setting lets you see and change whether the scanner stops on the channel if the selected tone is included with the transmission.
Double click on the displayed setting to change it.
☐ ON - the scanner does not stop on the channel if the selected tone is included with the transmission.
☐ OFF - the scanner stops on the channel only if the selected tone is included with the transmission.

Thanks
Joseph

Wanting To Monitor DPS

I live in the Austin Metro area I want to monitor the DPS. I can hear the dispatch talking to the DPS officer, but I can never hear the DPS office requesting or reporting anything to the dispatch. I have also setup the listed PL tones. Can you please give me the correct frequencies for this area. I have gotten information from Radio Reference.com, but I am not having any luck.

Thanks

Joseph

just remember this with DPS. In MOST cases, 155.4600 and 155.4450 are the primary dispatch channels with DPS statewide. They are almost always half-duplex, just the same as Texas Law 2, or Intercity. The units talk in on either 154.680 or 154.695, PL is 162.2. These frequencies are not repeated. Dispatch responds on 155.460 or 155.445. This is done because one dispatch transmitter may reach several counties in the region, and dispatch can hear all of these units even while they are transmitting. If they have an emergency message, or are giving a return and have a trooper give an emergency message, they and other troopers are not having to wait for info until the other guy stops transmitting. In some areas that are out of reach of an area transmitter, there are repeaters on 159.210. They repeat any traffic heard on 154.665 with the correct PL for that repeater. They also rebroadcast the dispatch traffic that those on 155.460 or 155.445 would hear closer to dispatch. An example is 159.210 PL 151.4 in Huntsville. Any trooper in Walker County is repeated locally and heard on CH 19 on Conroe's console. But they also hear all the traffic from 155.445 coming out of Conroe over this repeater. Sorry if this was a lengthy message, but it should cover just about everything.
To listen to the troopers, program in 154.680 for Austin with a PL of 162.2. You must be within ten miles generally to hear them. On some occasions, they may open the duplex into a repeater, but that is only for chases, or searches, or major events.

3100. DPS In Austin Texas and BC396T tone settings and Direct frequencies

Yahoo group: CenTexComm
Date: 2006-03-26 23:14:30 UTC
From: Trebor1159
Topic: 3100 Message: 3100

DPS Austin Base transmits on 155.46 from I-35 near Rundberg.
The DPS mobiles talk on 154.680.

Sometimes, and I have posted it several times, they run 155.46 in the full repeater mode, so you CAN hear the mobiles being repeated on 155.46 but this is rare and mostly you have to listen to both frequencies.. You will have to have a good antenna to hear them on 154.680 They tend to hang around on I-35 in that same area but can really be heard all over the county.

If you can pick up the New Braunfels relay, you can try to monitor 159.210 which repeats the mobiles if they are on that channel. sometimes they are and sometimes not. They have another mobile relay in Paleface (near Hwy 71 at the Burnet Co Line) but most troopers don't know it exists.

Sometimes the mobiles will go car to car on 155.46, but again you have to be very close to hear them.

DPS Capitol Bureau is on 155.445 and it is a full repeater so you will hear base and mobiles.. They are at Congress and 15th just north of the Capitol.
The mobile input is 154.695 but all traffic is repeated on 155.445.

There was an earlier question about BC396T and the Tones.
This setting lets you see and change whether the scanner stops on
the channel if the selected tone is included with the transmission.
DPS uses a tone of 162.2
So,based on what you posted, If that setting it set to ON then the scanner will not stop on the channel if the
selected tone (162.2) is included with the transmission.
And, If the setting is set to off then the scanner will stop on the channel only if the selected tone(162.2) is included with the transmission.
This seems opposite from the norm which may explain why the BC396T has been so complicated for everyone and why no one on here will respond to your questions about programming it.

I'm trying to identify the "direct" frequencies used by Austin and Travis County that are not part of the Trunked System. This means that those of you with non trunking scanners, may also still be able to hear some stuff.
I am hearing a lot more references to "direct" frequencies from the Trunked System. I have heard both APD and EMS say "Switch to B". And Today I heard Austin Energy Crews refer to "Direct 1". Here is the list I have so far of frequencies that are licensed but not trunked They may be digital or analog or not even being used at all. Let's see how many of these we can identify. They could be being used by Austin Energy or they could be being used by APD for tactical operations. Let me know what you hear. They will be very low power and only have a range of a mile or so depending on terrain but are great for car-to-car tactical

operations.

866.0375 Morse Code ID This may be all that is on this frequency
866.0625

3102. BCD396T Quick Keys

Yahoo group: CenTexComm
Date: 2006-03-29 00:50:44 UTC
From: josephsdavis13
Topic: 3102 Message: 3102

When using the BCD396T Quick Keys to monitor programmed systems, and for an example, you have five systems currently being scanned.

Instead of turning each system off one by one, is there a one or two key strokes method that can be used to turn off all scanned systems at one time? So far I have seen nothing in the manual that will allow this.

Thanks

Joseph

3103. APD Events Talkgroup 991 like a stuck microphone

Yahoo group: CenTexComm
Date: 2006-03-30 06:12:32 UTC
From: Robert
Topic: 3103 Message: 3103

All 3 of my trunked scanners are locking up on APD Event Talkgroup 991. There is no talking. It's like a stuck microphone although earlier I could hear bits and pieces of sounds almost like frequency hopping. I don't think it is anything going on. I don't know of any events going on tonight anyway that would need a talkgroup. I think it's some sort of glitch in the trunked system. It has been like that from about 5pm to midnight and beyond. Is anyone else getting it ?

I did hear some earlier traffic on talkgroup 1041 which is labeled as "APD Talk 12" but It was broken and I dont' know who it was or what they were doing.. that is the first time I have heard any of the APD Talks with any voice traffic on them.

Actually, I posted a response on DFWScan where Joseph also posted his problem with the PL features on the 396T. Didn't notice until now that he also posted here. So I'll repeat my post here in the hopes it clears up some confusion about this rarely needed feature.

The key word here is "lockout".
PL Lockout "On" means you do *not* want to hear transmissions with a certain PL tone being used. So if you programmed a PL lockout of 162.2 on 155.460, you will never hear DPS come through the radio. If someone else happened to transmit with a different PL tone on there, or even no tone at all, you would hear them.
"Off" means you *want* to hear transmissions with just that certain PL tone used (normal CTCSS mode).

Using PL lockout mode is really only useful if there is a certain user on a frequency
that is irritating and you do not want to hear them, but there are other users on the frequency, possibly with different PLs that you want to hear. Not something that I tend to use often.

Myles

I heard quite a bit on APD Talk 15 yesterday regarding the 500 blk
of Congress. I also had locked up on Event 1 with what sounded like
a stuck mic on Tuesday.

It had something to do with apprehending a pan handler with a baby in
a stroller. One officer was inside 515 Congress (or close by, inside)
giving the info to another on the street. Apparently, this is a
recurring deal with the toddler getting sunburned in the stroller.

3108. Round Rock Student "Protest" Round Up

Yahoo group: CenTexComm
Date: 2006-03-31 17:37:13 UTC
From: Russell Adams
Topic: 3108 Message: 3108

Round Rock is rounding up student "protesters" from several Round Rock high schools on RR Tac 4. Apparently, the "protest" has broken down into groups of students running from officers. Under age kids are being processed at Round Rock High School, of age kids are being turned loose. Several students are being charged with evading. There is a little action on Georgetown PD channels.

3111. Bell County EDACS System

Yahoo group: CenTexComm
Date: 2006-04-03 01:34:49 UTC
From: Steve
Topic: 3111 Message: 3111

Overheard on amateur radio was a conversation between the owner of the company that maintains the above mentioned system and another ham. Simply stated, the system is going to start a slow migration to Pro Voice. No mention of ESK and I did not barge in on the conversation to find out. Not good news but I'm sure that the owner will make his $$$ off of it and be quite happy. Not to mention full access!!

Becarefull....The formentioned person is a part of this list....
You do not see the whole picture....He owns a communications company who is contracted to maintain that system.He is paid for his labor and technical skills. His access to the system is a by-product of his job. I know this person and he is one heck of a person who I have in the past have had his help in amateur communications.

Just think that if YOU were in his shoes?

3116. Seeking Red Cross Frequencies

Yahoo group: CenTexComm
Date: 2006-04-05 17:35:47 UTC
From: josephsdavis13
Topic: 3116 Message: 3116

Seeking Red Cross Frequencies

I am looking for the Red Cross frequencies for Conventional radio systems and Talk Group ID's and frequencies for Trunk Radios systems for Travis, Williamson and Bastrop Counties.

I have checked with Radio Reference and have found some for the LCRA system, Talk Group ID's and frequencies for trucked systems for various Communities served.

I have not seen any for Travis and Williamson Counties trucked systems.

I have also not seen any frequencies for conventional radio systems for Travis, Williamson and Bastrop Red Cross.

Thank you,

Joseph

They also have some 47-ish MHz frequencies. I have never heard the
Red Cross on the radio be it a trunked system, conventional, etc. I'd
imagine they rely more on cell phones and such today.

I agree that they may rely on cell phones. But I am thinking during the first initial hours after a natural disaster such as a Tornado. The cell phone services could be over loaded or damaged from the storm. Using radios are more efficient in coordinating rescue and positioning resources.

I have their LCRA talkgroup and their conventional frequencies in my
scanner just in case. But in over a decade of scanning, I have never
heard them. :-(

Remember, the Red Cross is a disaster relief organization that usually comes in after first responders (fire, police, EMS, public works, and utilities) have at least begun initial response and mitigation.

Yes, I know, but they still must coordinate with the First
Responders, EOC's and Community Leaders at some point.

They could send advance staff in to make coordination of
resources. I am looking at all aspects, because all things do not
sometimes go according to plan. There are a lot of reasons why
policies in writing will not be followed.

3122. This weekend's "festivities"

Yahoo group: CenTexComm
Date: 2006-04-07 04:44:55 UTC
From: Glenn Morris
Topic: 3122 Message: 3122

I hope that you all have your PD and EMS freqs dialed in for this weekend. I've heard from two different sources that the SAPD are expecting trouble this weekend with the marchers who support the criminal aliens. They're keeping their preps low key so as not to alarm anyone or stir up more trouble. (Since when do the police worry about offending criminals?) The same may well be true for Austin. Be careful.

Unfortunately, here in San Antonio, I can not listen to my tax dollars at work. I'll have to watch the news and keep an eye/ear out for helicopters and sirens.

Glenn

BCD396T Advanced Scanner Director UASD V1.4.11

If you decide to upgrade to the new BCD396T Advanced Scanner Director UASD V1.4.11, backup your radio configuration and systems files.

When installing the new BCD396T Advanced Scanner Director UASD V1.4.11 it will also install Uniden's basic configuration and system files with your files, mixing them together.

Joseph

3127. Austin Texas BCD39T Support Group

Yahoo group: CenTexComm
Date: 2006-04-08 18:20:36 UTC
From: josephsdavis13
Topic: 3127 Message: 3127

Hello, my name is Joseph and I am looking for other owners and users of the Uniden BCD396T scanner that live in the Austin, Texas and Travis/Williamson Counties that use the radio. I would like for us share information about programming and radio adjustments to help get better use of the radio that we have purchased.

I have visited and joined some sites about the BCD396T radio, and have not seen a lot information or users in Austin, Texas Metro area, for this radio.

This region uses the APCO25, EDACS, Motorola Type II Smartnet and Conventional systems to name of few.

I have setup two users groups,
http://groups.yahoo.com/group/396TAUSTINTX/ and
http://groups.yahoo.com/group/BCD396TAUSTINTX/.

Scanning in this region has changed in the last 36 months and the methods of Conventional scanning has moved toward Trunked Systems. Information needed to monitor and program the systems into the BCD396T scanner are needed to allow hobbyists to enjoy the hobby without frustration.

My hope is to make available a pool of information about how to get the most out of the BCD396T scanner for the Members of the groups that will help everyone.

My back ground is United States Army Retired, Amateur Radio Operator (KD5KLY). I have used radios of all types since 1975 and have been scanning since then too. I work with computers providing support and repair for the State of Texas.

Sincerely ,

Joseph

http://www.radioreference.com

Built, owned and hosted here in Austin, I believe. Everything you
need to get your scanner programmed.

Mike :)

From: josephsdavis13
Topic: 3129 Message: 3129

Austin Texas BCD396T P25 Users

If you elect to use the new firmware version 1.11.03 and want to use the "Adjusting AGC Parameters (Unofficial)". Make sure that you have the "Adjusting
the P25 level set to manual" not auto or default.

My BCD396T works and sound great after new firmware upgrade. My audio quality has never sounded this good since I have had this in August of 2005.

Lastly take your time and read over the information, I feel you will be happy.

Special Events 1 is the incident commander; there are several chiefs, motors, L & W units, several other divisions, Air 1 and a dedicated dispatcher.

From: Mike Reed
Topic: 3132 Message: 3132

DPS has issued an advisory that they are not street legal - they meet
the definition of motor vehicle, but do not meet the requriements to
be registered in the state of Texas.

See <http://www.txdps.state.tx.us/director_staff/public_information/pr052005a.htm>
for more information (the text is copied below):

Mike :)

COPY:

To be legally operated on a public street or highway, a motor vehicle
must have a certificate of title and be properly registered with the
Texas Department of Transportation (TXDOT). In general, TXDOT does not
authorize the issuance of certificates of title for mini motorcycles.
Therefore, the mini motorcycles are not eligible for registration. The
main reason is that the majority of mini motorcycles lack a
manufacturer's certificate of origin or equivalent document which is
required for titling. Also the vehicles do not meet the equipment
standards required by federal and Texas law. In addition, only
DPS-approved moped models may be registered in Texas. Currently, no
mini motorcycle model is on the list of approved mopeds.

Some buyers have been told that mini motorcycles can be legally
operated on low speed streets because they qualify as "motor assisted
scooters" under Section 551.301, Transportation Code. However, under
Section 551.301, a "motor assisted scooter" must have a "deck" on
which the operator can stand and an engine not exceeding 40 cc. Mini
motorcycles not only lack a deck for standing, but most models have an
engine displacement exceeding the 40 cc limit.

Because mini motorcycles cannot currently be titled and registered,
they cannot be legally operated on public streets and highways.
Moreover, because mini motorcycles are "motor vehicles" they cannot be
ridden on sidewalks.

3136. BCD396T Display Arrow

Yahoo group: CenTexComm
Date: 2006-04-16 03:37:21 UTC
From: josephsdavis13
Topic: 3136 Message: 3136

BCD396T Display Arrow

On BCD396T display there is an arrow that points up on the right side of the display. This arrow will also point downward if the function key is held while pressing down the volume knob. I have not found the correct combination of keys each time.

Can anyone say for sure what this will do and how it works? I have found nothing in the Manuel so far.

Thank you,

Joseph

If you are searching/scanning one way in the memories, it will point up. If you turn the knob, it will reverse direction and the arrow will point down.

Hey, is the LCRA trunking system an antiquated system? I never hear anything but the hayes county SO and some capitol metro people mostly.. also, where do I get the firmware upgrade for my 396t?

Thanks!
admin@...

josephsdavis13 <jdavis86@...> wrote:
Austin Texas BCD396T P25 Users

If you elect to use the new firmware version 1.11.03 and want to use
the "Adjusting AGC Parameters (Unofficial)". Make sure that you have
the "Adjusting
the P25 level set to manual" not auto or default.

My BCD396T works and sound great after new firmware upgrade. My audio
quality has never sounded this good since I have had this in August of
2005.

Lastly take your time and read over the information, I feel you will
be happy.

Joseph

I have upgraded the firmware, and i have changed it from narrow to edacs standard/wide, i have both the austin listings programmed, but I'm closest to dobie.
I still only hear the hays co sheriff office, I never hear san marcos or anything else.. are you hearing them?? What could i be doing wrong, i'm sure it's programmed right.. i use arc396 to program it.

Can you please tell me where Dobie is?

This link below is a map of all the LCRA towers. The closer you are to a tower the better you will hear information from it. If you are too far away you cannot pick up anything. You may have not did anything wrong. I live in Pflugerville, Texas, just out side of Austin, Texas. I can pick Capmetro on the LCRA Tower. I also hear the LCRA Rangers for the Austin LCRA. Please visit the Radio Reference web page that I sent you and look over all of the LCRA sites and pick the locations close to you to program you radio.

From: W. Wanner
Topic: 3062 Message: 3143

hey, do you have the whole list for the LCRA trunking system? My 396 only came with a couple of the talkgroups programmed.. also I don't ever hear anything on the LCRA group..
josephsdavis13 <jdavis86@...> wrote: If you would like I can send you my BCD396T program files that I
have for the Uniden UASD Systems files. All of these work well and
I have corrected and program myself. I have the following systems
programmed:

Austin Police
Austin Fire
Austin EMS
Travis County Sheriff
Williamson County Sheriff
Round Rock, Fire, EMS and Police
Georgetown, Fire, EMS and Police
Cedar Park, Fire, EMS and Sheriff
LCARs most that can be heard
Starflight and Hospitals
Austin and Pflugerville schools and buses
Austin Independent School District Police
Capitol DPS
DPS
Bastrop County
Smithville Police, Fire EMS
Caldwell County
Hays County
University of Texas Police and Fire
Capmetro on LCRA

I can also enclose a quick key list too.

I need to double check every austin entry to verify if it's
correct.. I'm trying to get a datafile together to post up that
says "EVERYTHING YOU NEED FOR APD SCANNING" and just have them
download that and program it into the scanner.. i already have all
of the talkgroups programmed into the scanner properly, and just
that is a HUGE help, let me know if you have the programming correct
in yours... thanks!

dobie is a mall at guadalupe and 24th.. on the scanner it will say if it's not picking up the control tower.. do you ever hear any of the police agencies listed on the lcra talkgroup list?

josephsdavis13 <jdavis86@sbcglobal.net> wrote:
Can you please tell me where Dobie is?

This link below is a map of all the LCRA towers. The closer you are to a tower the better you will hear information from it. If you are too far away you cannot pick up anything. You may have not did anything wrong. I live in Pflugerville, Texas, just out side of Austin, Texas. I can pick Capmetro on the LCRA Tower. I also hear the LCRA Rangers for the Austin LCRA. Please visit the Radio Reference web page that I sent you and look over all of the LCRA sites and pick the locations close to you to program you radio.

From: W. Wanner
Topic: 3129 Message: 3148

I actually found a really great way to program in LCRA, instead of having each tower as a group, I used the arc396 program to import all the systems and talkgroup id's into 1 LCRA group, and it's working great for me.. i'm getting different stuff off the dobie, n.austin and creedmore towers.. I also talked to a guy last nite that explained if there isn't a user on the system monitoring .. say the san marcos PD from the dobie tower, it doesn't come across there.. but I'm getting alot more PD talk from the creedmore tower.. and yeah, those guadalupe ISD security guys are a trip..hah

I would like to know how you accomplished this because I was told
that all LCRA Systems frequencies had to be in the correct order to
receive a data from them. Is this something that the ARC396
programming software offers over the Uniden programming software?

3151. LCRA is EDACS

Yahoo group: CenTexComm
Date: 2006-04-22 00:01:20 UTC
From: Trebor1159
Topic: 3151 Message: 3151

The Uniden Scanners such as the BCD396T allow you to put several LCRA towers in one bank, but the Radio Shack scanners supposedly only allow one active EDACS system (which is what LCRA is) per bank. In either case the frequencies do have to be in correct LCN order (as listed on www.radioreference.com) And, as I learned the hard way, the first channel has to be in the position 01 in the Radio Shack scanner's bank. (the bank starts with channel 00 and it cant be that one)

While you are correct that the LCRA system is an EDACS system, you
are incorrect in stating that Uniden scanners allow more than
one site per "bank".

EDACS (and LTR) systems use a Logical Channel Number organization.
That means each frequency is assigned a logical channel number and
the Control Channel grants a channel based on the channel number
(LCN) not the frequency. Just as a side note, Motorola systems
also use channel numbers, but they are predefined. In any case
LCN 1 is LCN 1; the frequency assigned to LCN 1 at one site may
not be the same frequency at another site, even for the same
system. Hence no scanner can have more than one LCN 1 in a "bank"
since there is only one channel 1 in each "bank". Also, please
note that the BCD396T does not have "banks" at all; however the
same rule applies to systems. Each EDACS Trunking system in a
BCD396T can only have one LCN 1.

Now the BCD396T came with the LCRA as a predefined set of systems;
however, Uniden made an error and set them up as EDACS Narrow as
opposed to the correct classification of EDACS Wide (EDACS
Standard). This can be corrected with a little work and an
ASCII editor (such as Notepad). Either the first or second line
of each "*.USD" file will start with "SystemCT,EDN,...", all you
have to do is change that line to "SystemCT,EDW,..." and the
system will be changed to EDACS Wide.

3153. Extended Online Control BCD396T UASD Programming Software

Yahoo group: CenTexComm
Date: 2006-04-23 01:27:07 UTC
From: josephsdavis13
Topic: 3153 Message: 3153

Extended Online Control BCD396T UASD Programming Software

I want to share and remind users of the BCD396T UASD Programming Software, of the capabilities to capture Trunked System ID's when the scanner is the ID Search mode.

I live in the Austin Texas Metro area and monitor the Austin / Travis County Public Safety System (APCO 25). I have used Radio Reference to help in programming my scanner. Lately I have been leaving the scanner connected to the computer running the software and allowed it to logged all the unpublished talk group ID's not yet published in Radio Reference.

I have been most successful in capturing new ID's during the end of the month pays, weekends and any publicized community event like the MS150 Bike Ride. The program allows you to save the new talk group ID's and print them and update the Trunked system that you found them in.

Lastly as a suggestion I have a new channel find file that I made for each of my systems. They are setup for ID Search mode and quick keys. I did this so that I would not have to edit the system from ID Scan to ID Search and back again.

Happy Hunting

Joseph

3154. Scanner repair

Yahoo group: CenTexComm
Date: 2006-04-29 04:37:30 UTC
From: Steve
Topic: 3154 Message: 3154

Anybody know of a good scanner repair shop in the Killeen-Waco-Austin area? My BC245XLT has a bad hum when the charger is plugged in. I can kill the hum if I push down on the top of the case. Must be a broken connection in that area. Thanks Steve

3155. TxDot on 151.085 is testing something

Yahoo group: CenTexComm

From: Trebor1159
Topic: 3155 Message: 3155

Should be a nice weekend, lots going on: Eeyores Birthday in Pease Park, UT Blanton Museum opening, Poppy Fest in Georgetown

Saturday morning 10 am Radio Service keeps saying Test 1,2,3,4,5 on 151.085 It sounds like the repeater is linked to something.
I had heard a rumor that TxDot was playing with a 700 Mhz repeater in Cedar Park.. been trying to find that. it could be that or it could be something Toll Road related (still do not know what they will use for the Toll Roads)
Anyway, let me know if anyone knows what is going on.

From: Trebor1159
Topic: 3156 Message: 3156

151.715 and 151.655 were used at UT's Blanton Museum this weekend. I also heard Traffic on 150.73 while I was outside waiting to go in but then never heard it after that.

Georgetown's Poppy Festival "operations" was on 467.925

Eeyore's birthday festival down by Pease Park was using GMRS/FRS radios with medical on 462.600

All were found using my Pro-83 signal stalker function.

3159. BCD396T Data File ?

Yahoo group: CenTexComm
Date: 2006-05-08 19:06:37 UTC
From: Robert
Topic: 3159 Message: 3159

Could someone post a data file to the files section for the BCD396T?
I have had several people asking for one.

http://groups.yahoo.com/group/CenTexComm/files/

The Metro Traffic Plane (used to be Joe Taylor) that is usually on
450.9625 and 455.9625 is no longer using 461.750 but seems to now also
be on the UHF trunked system used by Austin Comm College and KEYE on
452.825 and 452.675 possibly still talking to KEYE.

3162. BCD396T Data File ?

Yahoo group: CenTexComm
Date: 2006-05-08 21:17:48 UTC
From: Robert
Topic: 3159 Message: 3162

The BCD396T should have come with software to program the radio. There should be a DATA file where the Austin information would be saved to. I was wondering if someone who has a data file of the Austin tower information that works with the BCD396T program could upload it to the files section.

STAR Flight To Celebrate EMS Week 2006 With Open House Event

Celebrating over twenty years in our community, professionals from the STAR Flight helicopter program will celebrate EMS Week 2006 with an Open House at the Travis County STAR Flight Hangar facility on Wednesday, May 17.

STAR Flight (Shock Trauma Air Rescue) began operation in 1985, to provide Advanced Life Support response and transport in the outlying areas of Travis County. In 1993, STAR Flight enhanced its operations to include helicopter rescue, land / water rescue, wilderness / SAR (search and rescue), and fire suppression.

A familiar fixture within the EMS, fire and law enforcement communities, the STAR Flight helicopter program provides 24 hour / 7 day operations to Austin, Travis County and nineteen surrounding counties - more than 16,000 square miles. The STAR Flight mission includes medical, rescue, fire assists and investigations, and law safety assists - the only air medical provider in Texas with such diverse capabilities. Since its first day of operation in 1985, STAR Flight has:

logged almost 14,000 flight hours
recorded over 68,000 take-offs and landings
traveled over 1,300,000 miles
transported nearly 19,000 patients

The STAR Flight program flies two new Eurocopter EC-145 helicopters. The new aircraft were placed in service on April 19, 2006. STAR Flight's usual flight configuration includes three crew members - pilot, flight paramedic and flight nurse. STAR Flight can carry up to two patients, and recently added capabilities for transporting premature infants with specialty hospital team members.

There are two STAR Flight helicopters, STAR Flight 1 and STAR Flight 2. One helicopter is on duty at all times. Austin-Travis County's STAR Flight is the only public safety air medical provider program in the country to be sanctioned by CAMTS, the Commission on Accreditation of Air Medical Transportation Systems.

Please join us at our Open House! The public is invited to attend.

STAR Flight Open House
Wednesday May 17, 2006
5:00 - 8:00 p.m.
STAR Flight Hangar
7800 Old Manor Road

3171. National emergency system on verge of collapse

Yahoo group: CenTexComm
Date: 2006-06-14 21:59:11 UTC
From: Robert
Topic: 3171 Message: 3171

Good article about Austin EMS. I remember when they had the 2 tiered system using ALS and BLS ambulances and they claimed "that" was the best system in the country. Now they are saying this is, so who knows. What the article does not say is that Pat Crocker had disagreements with the EMS commanders about understaffing in a Statesman article about a week ago. We are very fortunate to have the Heart Hospital here. The patient does get the best care. They just spend a lot of money doing it.

National emergency system on verge of collapse

Reports cite Austin/Travis County as bright spot.

By Mary Ann Roser
<http://www.statesman.com/news/content/news/stories/local/06/mailto:maroser@statesman.com>
AMERICAN-STATESMAN STAFF
Wednesday, June 14, 2006

A series of reports released Wednesday on the state of emergency health care in America depicts a strained and fragmented system that is unprepared for a disaster and in bad need of attention, coordination and money.

Austin/Travis County's emergency medical system is singled out as a bright spot in the reports by the Institute of Medicine. But the local system still "struggles when hospitals are crowded, and we still have patients boarding in the emergency department" overnight when hospital beds are scarce, said Shirley Gamble, who chaired a committee that wrote one of the reports. She is chief operating officer of the United Way Capital Area in Austin.

With hospitals across the country struggling daily to keep pace with 911 calls, the health of the system does not bode well if a disaster, terrorist attack or flu pandemic should occur, officials said.

"There's a crisis in every aspect of hospital-based emergency care, in EMS and hospital-based emergency care for children," Gail Warden, chairman of the overall committee that produced the three reports, said at a news conference in Washington on Wednesday. The system is "going to collapse without intervention from Congress."

The reports, totaling 816 pages and taking two years to produce, examined hospital-based emergency care, emergency medical services and emergency care for children. Warden, retired president of the Henry Ford Health System in Detroit, called them "the first in-depth study of emergency medicine in 40 years."

Chief among the recommendations is coordinating emergency care on a regional basis so that EMS and hospital emergency departments work hand-in-hand to

provide consistent, quality care and to ensure that patients are taken to the hospital best equipped to care for them.

The reports cites Austin/Travis County for having such a system.

The local EMS system has united 13 fire departments and runs a unified 911 system with uniform protocols. Its communications are coordinated with local hospitals so patients get to certain hospitals for heart attack, stroke and other conditions, said Dr. Ed Racht, medical director Austin/Travis County EMS.

"It's flattering they would use us as an example," he said.

Only three other U.S. jurisdictions were highlighted as models in the reports: San Diego, Palm Beach, Fla., and Maryland's statewide EMS/trauma system.

"There is as much as a 10-fold difference in survival in cardiac arrest in some communities," rates that range from 5 percent to 50 percent, Gamble said.

Her report asks Congress to spend $88 million over five years on demonstration projects to promote greater coordination and accountability of emergency medical care.

The reports also ask Congress for $50 million to help reimburse hospitals for patients who can't pay for their emergency care and $37.5 million each year for the next five years to address weaknesses in providing emergency care to children.

"The emergency care system . . . has provided fantastic care for the country, but it is not providing the level of care people think that it is, and it verges on the edge of collapse" in many places, Gamble said in an interview.

The biggest problem, Warden said in an interview, is a lack of coordinated care among hospital emergency departments and EMS at the local level, which has caused overwhelmed ERs to divert patients in ambulances to other hospitals. Other problems include increasing financial pressures because of high demand from government-insured and uninsured patients; a dwindling number of specialists willing to be on call after hours in emergency departments; too few hospital ER and hospital beds to accommodate patient demand and population growth; a lack of regulation and accountability to ensure high standards of care; and patients without access to primary care using the ER for worsening medical conditions.

Austin is among the communities with problems finding specialists to staff its ERs. The report recommends that certain hospitals be fully staffed with on-call specialists, an idea being promoted by Dr. Pat Crocker, chief of emergency medicine at the publicly owned Brackenridge Hospital and Children's Hospital of Austin.

Interesting report. Thanks, Robert. I've had two Austin emergency room experiences in the past year & I have learned that it's better to let EMS bring the patient than to "do it yourself." They "waltz right in" while "walk ins" sit & wait. I don't know how universal this is, but next time I'm calling EMS.

As a paramedic I can assure you that I've put many, many patients in a chair in triage straight off my stretcher.

Ambulance does not equal "waltz on in." Typically, their patients have had a more acute presentation. From working at Brack I can tell you that some of those brought straight back by EMS do in fact get put in triage, too...

Mike :)

Programming the BD796D

I have noticed looking at program files that I have down loaded form the internet, for the BD796D that the talk group ID's are 6 digits long and have zeros as the first numbers even through some are listed only as 3 digits and have no zeros in them. Is there a reason for this and is it necessary?

That is actually not completely accurate. EMS patients are triaged
the
same as walk-in patients, particularly those with minimal complaints.

And while our prices are very reasonable, compared to others in the region, you will also have a decent size bill that may or may not be paid by your insurance company if your complaint didn't fit their criteria of an illness/injury requiring EMS transport.

Then there is the other issue of utilization... While you are being transported to avoid a wait, there could be someone else in your neighborhood who really needs EMS that ends up having to wait for the next closest unit to respond.

Of course I am responding to this assuming that you were being honest/serious... and there is a good chance that you were only kidding. :)
So if that's the case, please disregard.

Ultimately, the hospital makes the call as to the patient's status. Patients are assigned to ER beds or the waiting room based on their symptoms, complaint, and presentation -- not by the mode of transport.

The real advantages in activating 911 for EMS (and fire department responders) come from two things:
1) Early identification and ER notification for life-threatening matters (strokes, major trauma, and heart attacks come to mind)
2) For medical emergencies, much of the treatment EMS provides is the same treatment that the ER would perform. This is particularly critical in situations where airway compromise is imminent (asthma and allergic reactions come to mind).

In short, getting an EMS ride to the ER for your two-week old toothache most likely won't result in any quicker visit with the doctor. It will result in another bill -- and most importantly, it means that ambulance may not be available to provide life-saving care for a true emergency.

However, it's always better to err on the side of caution. If you think you need EMS, call us.

And as usual, Wes has put it much more eloquently than I. :-) I guess that's why you are the lawyer, huh?

I agree that you should always err on the side of caution and call EMS if you are having an emergency. Just know that if you have a complaint that would have landed you in the waiting room as a walk in patient, you will most likely land there anyway.

Absolutely, beyond any shadow of a doubt call us if you need us...

Hey Maury,

Couldn't agree more... It is very frustrating to be stuck in a waiting room. I had one of those career altering experiences a few years ago at a local ER. Kidney stone that had me wishing someone would let me borrow a knife and do some self surgery. I got stuck in the waiting room for about 45 minutes... Without a doubt the longest 45 minutes of my life.

If you (or anyone else here) ever has any questions about something we are doing (or not doing) at EMS... Especially on the Communications/Dispatch side... feel free to drop me a line anytime. My email address is adam.johnson@.... I'd be happy to answer any questions you have; if I don't know the answer, I'll find it.

Take care!
Adam

3182. Texas LCRA Wild Cards

Yahoo group: CenTexComm
Date: 2006-06-18 02:06:43 UTC
From: josephsdavis13
Topic: 3182 Message: 3182

I may not be telling you professional scanner enthusiast anything about this problem resolved. I have been having problems hearing the Texas LCRA systems for the last year since I brought my BCD 396T scanner.

Today I saw where UPMAN from Uniden was explaining how to use agency two digit wild cards for the LCRA system to monitor all systems. This process worked very well and now I am receiving all types of information. It was simple I went to the LCRA Radio Reference site and looked up all the 2 digit agency numbers for the LCRA for all sites and placed them in the channel bank with a dash, (02-)

I just want to pass this on because it the past I have read where others have had similar problems.

Thanks

Joseph

3183. Monitoring San Marcos and Hays County By LCRA

Monitoring San Marcos By LCRA

This information might be old news to some. I am able to monitor all San Marco and Hays County public services with a combination of LCRA sites using a template with the Talk group ID's of Hays County.

When I am in Austin Texas in the basement at work can monitor very well. When I return to Pflugerville Texas I can continue to monitor San Marcos and Hays County with different LCRA sites that I setup.

In the interest of sharing and giving to help to others that have help me I will send the Texas LCRA files that I have to anyone wants them.

Thank you,

Joseph

3184. What Austin tower are you hearing the San Marcos talkgroups

Joseph, are you hearing the San Marcos talkgroups off the Creedmoor tower or somewhere else?
With the LCRA system, it depends on what mobiles are tuned to that tower. Sometimes I hear them on the N Austin (Georgetown) tower and sometimes not. We still need to identify the tower out in Westlake Hills
904 Austin Area02 936.91250* anyone doing any computer scanning?

If you have a pro396 file, post it in the files section.

LCRA is at:
http://www.radioreference.com/modules.php?name=TRSDB&sid=48

I placed my Talk Group templates for Hays County and San Marcos into the following LCRA towers and these towers are displayed when any Hays County and San Marcos Talk Group is talking:

Austin
Heletsville
Bastrop/ Luckenbach
Fredericksburg 2
Llano
Austin/Dobie
Bay City
Seward Junction
Flatonia 2
Boerne
Blanco South
La Grange
Elgin
Doss

I am not getting any data off the Creedmoor tower. I have found if a manually turn to different frequencies I can here radio traffic and I not sure they is happening.

I've found the Correct LCN for the Creedmoor site. Check
http://www.radioreference.com/forums/showthread.php?t=40633

On a side note.... Travis Co SO West is patched into 314 (02-072) on the LCRA system tonight 10:43pm

From: josephsdavis13
Topic: 3188 Message: 3188

My updated BCD 396T programmed with the new LCRA information on the Creedmoor site is working great. I can receive Hays County, New Braunfels, Gillespie County and the Cities of Klye and San Marcos and Wimberley from my office in down town Austin, Tx.

3189. Re: [CenTexComm] What Austin tower are you hearing the San Marcos talkgroups

From FCC records, would appear to be the Cedar Valley site, listed as site 140 in RadioReference, just with a different control channel.
Tower is on Hwy 290 halfway between Cedar Valley and Dripping Springs, near CR 185.

Motorola Trunked System Wild Cards

I want to program Motorola Trunked systems with wild cards to find
other talk groups for the following trunked systems:

Motorola APCO 25
Motorola Smart Net Type 2

Thanks

Joseph

It seems this tread has two people asking a question. I will answer both.

I am receiving the San Marcos information the Creedmoor site and the Austin and a couple of others two.

The other sites that I am receiving the San Marcos information on. I have copied and pasted the same Talk group information into the other sites. When San Marcus shows up on my radio it will show the different sites that I have copied and pasted the Talk group information into.

3195. LOWER COLORADO RIVER AUTHORITY

Yahoo group: CenTexComm
Date: 2006-07-11 03:13:46 UTC
From: Trebor1159
Topic: 3192 Message: 3195

LCRA has tons and tons of sites.. they have cameras. telemetry and other monitoring sites. they licensed everything but are not using everything they have a license for. The best source for active sites is http://www.radioreference.com/modules.php?name=RR&sid=48

Site #915 is called "Austin", but it is actually on I35 near Westinghouse Rd closer to Georgetown.
I am not aware of any LCRA tower site in Jarrel

Site #140 is listed as "Cedar Valley" but only shows the 1 control frequency. You can't monitor with just that. You would need the rest of the frequencies off that tower.. anyone out there computer scanning the data channel with trunker or whatever ?

Finally I'm still confused as to what Joseph was talking about. He said " I placed my Talk Group templates for Hays County and San Marcos into
the following LCRA towers and these towers are displayed when any Hays County and San Marcos Talk Group is talking":
Austin
Heletsville <- Hallettsville is south of I-10 and no way can be heard in Austin
Bastrop/ Luckenbach <- 2 different towers. Bastrop is pretty far and Luckenbach is even Further
Fredericksburg 2 <- no way can this tower be heard in Austin
Llano <- no way this tower can be heard in Austin
Austin/Dobie
Bay City <- almost to the coast; absolutely no way this can be heard in Austin
Seward Junction
Flatonia 2
Boerne
Blanco South
La Grange <- not in Austin
Elgin
Doss <- beside Fredericksburg and no way can it be heard in Austin
This is not the way the scanner works. You don't put in the talkgroup and have the scanner tell you what tower you are monitoring.
You put in the towers that are near you. (not Bay City, Hallettsville, Lukenbach, Llano or Doss) and you see what talkgroups you get off of those towers. Joseph also said he can hear "Hays County, New Braunfels, Gillespie County and the Cities of Klye and San Marcos and Wimberley"
but if he is in Austin, he may (from time to time) hear these talkgroups like New Braunfels but not on a regular basis. This would only be if a radio tuned to one of those talkgroups is in the Austin area.

That is one hell of a lot of frequencies but I wonder if any of them are used. They were all granted in 2002 so it may be for a future system. Beats me. I guess these need to be checked out.

Yes that is true, but if the tower exists, it would be in Bell
county. From the FCC Database:
2.1 MI S OF PRAIRIE DELL
JARREL, TX BELL County
So it would be in Bell County, just north of Jarrel. Since
Jerrel is the closest town, it is used as reference.
If this is site is established as an active site, it will be
listed on RR as in Bell Co.

I've been working on getting accurate LCN's for all the sites that surround Caldwell County for www.radioreference.com It's been no easy task and there are many, many more sites that need updating. Mainly, we need to get better accurate site locations. As Robert pointed out the site labeled "Austin" should be Round Rock or Georgetown. If anyone has a etrunker capabilities or a scanner that can decode the control channels (like the RS pro-2067) This is how I got the updated site around me. Using the 2067 and another scanner in manual mode with all frequencies listed by FCC. It's seems like a long and painstaking task, but it really only took me about 10 minutes to get each site in the correct order.

I've been working on getting accurate LCN's for all the sites that surround Caldwell County for www.radioreference.com It's been no easy task and there are many, many more sites that need updating. Mainly, we need to get better accurate site locations. As Robert pointed out the site labeled "Austin" should be Round Rock or Georgetown. If anyone has a etrunker capabilities or a scanner that can decode the control channels (like the RS pro-2067) This is how I got the updated site around me. Using the 2067 and another scanner in manual mode with all frequencies listed by FCC. It's seems like a long and painstaking task, but it really only took me about 10 minutes to get each site in the correct order.

3210. APD UHF channels

Yahoo group: CenTexComm
Date: 2006-07-12 21:18:45 UTC
From: Aaron Slaughter
Topic: 3210 Message: 3210

I did a quick search of the posts, but didn't find anything...

Is APD still simulcasting on any of the old UHF channels?

I know EMS still pages on 462.975 and AFD on 453.275. I also occationally hear another Old Firecomm, but I never get back to the scanner quick enough to see which one.

3211. APD no longer simulcasting on UHF channels

Yahoo group: CenTexComm
Date: 2006-07-12 21:47:13 UTC
From: Robert
Topic: 3210 Message: 3211

No, APD is not doing any more simulcasting on any of the 460 mhz frequencies although there are still some active 460 repeaters, which makes you wonder what they are keeping them for.

Travis County SO is not simulcasting on any of their old VHF either.

EMS does simulcast on 462.975 so corporate first responders (such as IBM) with UHF radios can contact Austin EMS

I'm also told that they can't have pagers on trunked systems and EMS is still clinging to their pagers so that's another reason they still have 462.975. The old Firecom's 453.xxx are still used occasionally for Knox boxes and such. (I thought they "had" to abandon their old frequencies? Apparently not

Topic: 3213 Message: 3213

Good evening,
I ran across 935.700 which is pretty much licensed out to LCRA except a few other locations way out of our area. Which site is using this frequency for their control channel?
With T4win I am showing LCN order of 1 to 6.
Could this be burnet or austin?

If the information from radio reference is good then I am trunking the LCRA Council Creek location with the Control Channel is 935.700.
I have found the following trunk groups showing up.
05-031
02-155 (patch)
02-073
02-074

Not bad for up here in Nolanville

From: WR1TX
Topic: 3214 Message: 3220

I had planned to use at the very least Beldin RG-213 with N connectors, but I may go with LMR-400. The Yagi I plan to buy will be commercial grade and will have at least 7 elements and up to 15. I've been online shopping today for 900 MHz Yagis and I have seen some pretty decent deals out there. Nothing on eBay that's decent, but I expected that.

Along with a ChannelMaster (aka Radio Shack or similar) rotor and on a 30-ft pole, I should do all right I think!

A discone wouldn't help at all. They have no gain. They're just
broadband, omni-directional antenna. A Yagi would be great, but at
those frequencies you'll need good coax.

3221. TXU BELTON

Yahoo group: CenTexComm
Date: 2006-07-17 02:53:17 UTC
From: Glenn Blum
Topic: 3221 Message: 3221

Good evening,
All the references I can find about txu belton gives me 12 frequencies. Isnt it only 4?
Lcn3=936.4375
Lcn4=936.4625
Lcn6=939.9500
Lcn8=937.6625

My control channel monitor shows only these lcn's.The frequencies I added in from the references.
Does anyone trunk TXU Belton can confirm this?

Thanks,

Glenn

3222. Trying to monitor LTR 452.675 Austin Community College

Yahoo group: CenTexComm
Date: 2006-07-21 16:40:34 UTC
From: Trebor1159
Topic: 3222 Message: 3222

I would like to try to hear ACC (Austin Community college) Police on their LTR trunked system.
I hear them on 452.675. When I search that frequency the only system I come up with near Austin is this one:

http://www.radioreference.com/modules.php?name=RR&sid=2104
Temple Tx LTR Standard Analog
001Confirmed LCN

04 452.00000

08 452.0750

12 452.37500

16 452.67500

20 463.40000
But I do not necessarily think this is the right system because this one is in Temple and also on 452.675 I hear a garbage company that comes all the way from San Antonio every night and I can hear them saying they are in San Antonio and hear them driving all the way up to Austin. So it must be linked to another system down in San Antonio. I understand the Radio Shack Scanners will not monitor LTR properly. If I use a Uniden BC296D It might work. Does anyone monitor or know know to monitor them. Again this may be the wrong system, but perhaps someone out there who is computer scanning can help out.

So for this one I put them in and skip spaces ? like 01 and 02 and 03 are skips so does there just have to be any unlocked frequency in there or can it be blank and locked out ?

3223. Re: [CenTexComm] Trying to monitor LTR 452.675 Austin Community College

> Antonio and hear them driving all the way up to Austin. So it must be linked

They're probably linked. I used to monitor an LTR system (might have
been this one) and I'd hear taxis in San Antonio, garbage collection
in Killeen, etc.

> to another system down in San Antonio. I understand the Radio Shack
> Scanners will not monitor LTR properly. If I use a Uniden BC296D
> It might work. Does anyone monitor or know know to monitor them. Again
> this may be the wrong system, but perhaps someone out there who is computer
> scanning can help out.

LTR works a little different that Motorola and EDACS. For one there's
no control channel. The trunking information is encoded before (or is
it after?) the voice transmission. Also users have a home channel.
You could program 452.675 as a conventional and hear ACC PD there most
of the time.

> So for this one I put them in and skip spaces ? like 01 and 02 and 03 are
> skips so does there just have to be any unlocked frequency in there or can
> it be blank and locked out ?

I don't think the frequency as to be zeroed. It just can't be tagged
as trunked in your scanner. But you do need to skip, much like EDACS.

Thats true.
They way I look at it, is you purcahse into this or any wide coverage system that is controled by a private party you have certain options you can buy into. I would think that if you were a small police or fire dept you wouldnt need 1500 square miles of coverage.This allows operators/users to get the best value for their money.
I have been monitoring the council creek location for a week now and I have logged 48 trunk groups and I know that all the trunk groups listed on Radioreference I wouldnt see.However I have logged trunkgroups that are not listed.
Does anyone have a updated list of trunkgroups for LCRA?
Thank you,

Glenn Blum

Have visited site and THANKS for info. Seems we should monitor AM as they are just using a keyed format. (Appears to all depend on freq to identify specific bird.

Alas RS scanner won't accept freqs! (Pro 96 and Pro 91.) Have gotten around this by programing Pro 96 for 172.0-173.0 MHz in AM mod.
(Yes, I have Extended Freqs enabled...)

Very interesting to me and I'm doing all I can to monitor.

From: Russell Adams
Topic: 3184 Message: 3237

Site number 140 is an unconfirmed site number for the Cedar Valley site. I picked 140 out of the air (no pun intended). I was out that way with no equipment and picked up the control channel only. I haven't had a chance to head back there with Trunker and more than one scanner. Once I get back out there I'll snag the real site number and the LCNs.

Another person made reference to this site some time last year either here or on RadioReference. He had the same control channel, but never made it back with the LCNs, freqs, etc.

From FCC records, would appear to be the Cedar Valley site, listed as site 140 in RadioReference, just with a different control channel.
Tower is on Hwy 290 halfway between Cedar Valley and Dripping Springs, near CR 185.

From: Russell Adams
Topic: 3192 Message: 3238

If you check out the lat/lon of the call sign, it shows this site to just west of Mopac, south of 2222 near Austin Country Club.

http://maps.google.com/maps?f=q
<http://maps.google.com/maps?f=q&hl=en&q=30.32325,+-97.79983+(LCRA+%5BWPMI700%5D)&ie=UTF8&om=1>
&hl=en&q=30.32325,+-97.79983+(LCRA+%5BWPMI700%5D)&ie=UTF8&om=1

You can actually see the tower if you switch to "hybrid" and zoom in close enough. Google is your friend.

Has anybody tried to check out the other "Austin Area" site 904. The license says the transmitter is at 2021 Guadalupe on top of a building, right next to UT. There are tons of other transmitters at or near this site. This one might be pretty easy to peg (emphasis on "might").

From: Trebor1159
Topic: 3192 Message: 3239

The Dobie Mall/Dorm site at 2021 Guadalupe is valid. This is a student dormitory but has some small shops at the bottom including a movie theater. The site was mainly put in when Capitol Metro started using the system. I figured out all the frequencies for the site sitting in a small parking lot behind the Bob Bullock Museum for about 2 hours.

The other site is where the antenna towers are located is the Westlake Hills area. I did not think there was a transmitter there. If there is, then no one has been able to get the right frequencies or order.

Harmon said is hearing a tower that has the same configuration as:
211 Concrete
<javascript:Start('modules.php?name=RR&action=siteInfo&sid=48&site_num=211&d=','height=375,width=500')>
01 935.38750 02 935.97500 03 937.95000 04 938.50000 05 939.88750

Perhaps there is a tower closer to Austin that has this same configuration since the actual Concrete tower is South of Interstate 10 along Hwy 183

3246. LCRA sites all being updated on radioreference.com

Yahoo group: CenTexComm
Date: 2006-08-16 17:58:45 UTC
From: Robert
Topic: 3246 Message: 3246

For those who monitor LCRA, there are tons of changes being made. There are a lot of new people with scanners and they are submitting a lot of changes. Hopefully it's all correct. You can check:

http://www.radioreference.com/modules.php?name=RR <http://www.radioreference.com/modules.php?name=RR&sid=48&d=&opt=all_tg> &sid=48&d=&opt=all_tg

Please post any confirmations or updates and please do the same at www.radioreference.com <http://www.radioreference.com/>

Their Forums section has a lot of discussion both about the LCRA talkgroups and about the Austin/Travis Co System. I tried to get everyone to post on here also too but it's hard to get everyone on the same page. The LCRA Austin 1 tower is gone and is now being called Georgetown??, In addition, they have added "Cedar Valley" off Hwy 290 just outside of Dripping Springs and a "Lake Austin" tower out in Westlake. They have also added more frequencies to the Austin/Dobie Tower. The "Lago Vista" tower is also gone, and now they have one listed as "Leander". Seward Junction is also gone. I'm not sure if all of these are correct so that's why everyone needs to monitor and try and confirm that they can "follow" the conversations. Remember, LCRA and Austin Travis Co have licensed a lot of frequencies on a lot of sites, but not all of them are active. Just because it's on the FCC data base, does not mean it is actually working.

I have had a lot of people ask me about the "APD Talk" talkgroups. Aside from a few people hearing them at some special functions, they are not being used regularly and I still do not know who came up with all of those listings. It definitely was not me. I have spoken to several APD officers and none of them have even heard of those talkgroups nor is it programmed into any of their cars.

3249. Radio Shack Pro-96 or Pro-2096 new DSP 1.3 upgrade is available

Yahoo group: CenTexComm
Date: 2006-08-23 11:59:19 UTC
From: Robert
Topic: 3249 Message: 3249

If you have a Radio Shack Pro-96 or Pro-2096 a new DSP 1.3 upgrade is
available on RadioShack.com Support:
<http://www.radioshack.com/product/index.jsp?parentPage=search&summary=summary&te\
chSpecs=techSpecs¤tTab=summary&cp=&custRatings=custRatings&features=featur\
es&accessories=accessories&productId=2036238&origkw=scanner+download&support=sup\
port&kw=scanner+download&tab=support>
<http://www.radioshack.com/product/index.jsp?parentPage=search&summary=summary&techSpecs=techSpecs¤tTab=summary&cp=&custRatings=custRatings&features=features&accessories=accessories&productId=2036238&origkw=scanner+download&support=support&kw=scanner+download&tab=support>
you have to copy and past the entire URL above if it does not take you
there directly.

To find out what your radio has now.. turn it off and back on and when
the greeting message appears press the number 3 and look at the 2nd line
to see what DSP-APP says.. this will be an update to 1.3. Once you get
to the page click on the 2nd down loadable Product Update.

3253. 936.4375 shows active TXU in Belton

Yahoo group: CenTexComm
Date: 2006-08-30 23:51:51 UTC
From: Trebor1159
Topic: 3252 Message: 3253

Going to:
<http://www.radioreference.com/modules.php?name=RR&stid=48>
and Searching All Texas Identified Frequencies by Frequency:
I do not find 936.4375 matched to any of the LCRA towers
I do however find it matched to the TXU system, so jumping to the list
of TXU towers:
<http://www.radioreference.com/modules.php?name=RR&sid=1466>
I find it located on a Belton tower:
205 Belton 01 935.91250 02 936.41250 03 936.43750 04
936.46250* 05 936.96250 06 939.95000
07 938.96250 08 937.66250 09 936.90000 10 937.47500 11
937.42500 12 939.96250
Belton could be considered "Central Texas" since you didn't specify
where you had heard the control channel from, it could be anywhere from
San Antonio, up towards Temple/Belton and out west past Gillespie Co,
So that would be might guess.
Of course it could be an unidentified tower from any agency. Does the
control channel sound like other LCRA control channels? I can't hear it
near Mopac/Parmer.

The only problem is this:
http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=1926698
The FCC says other. Maybe it is TXU and they reconfigured the Belton location.
T4win is showing 936.4375 as control channel #3
with other channels as follows;
3 (control)
4
6
7
8
9
17
19
20
24
29
Mostly channels 4,6,8 are utilized.
Thanks,
Glenn

Glenn,

As others have pointed out this is a TXU channel. Another hint
that it is not an LCRA is that LCRA uses a EDACS Standard (9600)
CCh, not the narrow band (4800) one.

3259. 4800 edacs control channel saga

Yahoo group: CenTexComm
Date: 2006-08-31 20:31:57 UTC
From: Glenn Blum
Topic: 3259 Message: 3259

Louis and rick,
Under Trunkpcr control channel screen 936.4375 shows only 4 channels and this is after a full day of trunk searching.
LCN no. 3 936.4375 (control channel)
LCN no. 4 ?
LCN no. 6 ?
LCN no. 8 ?

All the trunk groups show as TXU or Ft.Hood. So this is in my area. The only problem is the signal strenght is around S-1 but I get a good recovery rate.

Here is a screen shot of it working in action (if I can send it to the group open):

3260. 936.4375 (TXU BELTON)

Yahoo group: CenTexComm
Date: 2006-09-02 00:54:12 UTC
From: Glenn Blum
Topic: 3260 Message: 3260

After a day or so of trunking I have determined that 936.4375 is the proper control channel for the TXU Location in Belton Texas.
The following Logical channel order and frequency;
LCN 3 = 936.4375 (control channel)
LCN 4 = 936.4625
LCN 6 = 939.9500
LCN 8 = 937.6625

I am surprised since that location is only a few miles away I get a very low signal strength.

Glenn
Nolanville,Texas

This may or may not be related....

I'm picking up an EDACS 4800 control channel from Lockhart on 936.4125

It's showing LCN 14 on unitrunker. I searched the database and TXU shows a license with this frequency in Bastrop County. I'm monitoring it, but so far no traffic.

Arron,
How did you get unitrunker to select EDACS! I cant get it to allow me to select EDACS. The Trunker group is very little help.

When you tune to an EDACS frequency, Unitrunker auto selects it. If you are referring to talkgroup/user format. Select "Options" then choose "Hex" under display mode

Hi Glenn;

As Aaron said - you don't need to select the type of trunking system. Just tune your radio to the control channel. The program figures out the rest. The only things you need to worry about initially are (1) which sound input to use eg. line input vs. microphone input, (2) what sample rate to use - a rate of 44100 works fine for most folks; and (3) signal polarity (either inverted or normal). The only other setting that might effect decoding is the option to turn the decoder off (make sure it is turned on).

The next public beta implements auto-polarity so in the future you'll only need to worry about (1) and (2).

If for example, you're currently decoding a Motorola system and you "bump" the radio over to an EDACS control channel - the program detects the change - saves your trunking data - starts decoding the new control channel - and loads any existing data associated with this new signal.

3266. Batteries for Communications Purposes

Yahoo group: CenTexComm
Date: 2006-09-04 05:40:32 UTC
From: WR1TX
Topic: 3266 Message: 3266

I may have brought this up before, and this might be an off-topic subject in some circles, but here goes:

Where can I find a reliable deep cycle or gel cell battery (or batteries) in Central Texas for communications purposes whether it be for transmitting or receiving? The same question goes for chargers for these batteries.

Any help would be appreciated; the info gathered will be applied toward my portable and possibly bicycle mobile applications.

3267. Communications Batteries Clarification

Yahoo group: CenTexComm
Date: 2006-09-04 06:10:28 UTC
From: WR1TX
Topic: 3267 Message: 3267

As a addendum to my original questions about deep cycle and gel cell batteries and chargers for them, I should state that the batteries will be used for HF purposes (5-100 watts output) and VHF-UHF purposes (50/35 watt output high, 5 watts low).

I hope that clarifies my original questions.

This may be of subject also, but AA scanner batteries are in use here.
Find 1800mAH are MUCH better than 1000mAH examples.

I advise you to find the highest AH or mAH you can find for your
application.

3271. Interesting patrol car

Yahoo group: CenTexComm
Date: 2006-09-16 02:30:42 UTC
From: John Mayson
Topic: 3271 Message: 3271

I was driving down Parmer and right on the Travis/Williamson line I
saw a dark blue Dodge Charger (?) with "Sheriff" written on the side,
but in a color about 1 nanometer different from the rest of the car,
so I could only see the word looking at the car at a certain angle.

Since the patrol car had someone pulled over driving east, I'm
suspecting the car belongs to WCSO. Anyone know?

I know I saw the article in Austin paper about TCSOs new little unit, but I am pretty sure I saw the same vehicle working a wreck on 1431 around Vista Oaks, just east of where Sam Bass comes out. That is way the heck away from the Travis County line.

I was assuming WCSO had "borrowed" a car to try it out. I know Dodge is doing a big push on this car to get business. When I was visiting my brother in New Jersey last month there was a story in the paper about several police departments trying out the new car.

From: Robert
Topic: 3274 Message: 3274

I took pictures of the Mobile Command Post (RMC-1) at the ACL
Festival. Pretty impressive looking. I'm sure it cost at least
$500,000. It looks like they can set up a trunked system anywhere.
I posted the pictures in the photo section.
<http://ph.groups.yahoo.com/group/CenTexComm/photos>

So some of the Tollways will open Nov 1st. I assume DPS is going to
patrol that. I'm surprised I haven't seen any special radios pop up
for them. Perhaps them and the toll plazas will be on the 800 Trunked
System like they are in Houston.

I saw that same car, except no markings on it about 2 weeks ago... VERY sharp looking.. it looked like a travis co. uniform the guy was wearing.. it was a black deputy driving it.. I don't pull over for cars with no markings on the side.. the law states that they must have an emblem of a certain size (i forgot the dimensions) for it to be used for traffic stops... and anyone who pulls over for a car with just some little red and blue lights in the front isn't very smart... I've seen too many reports of people impersonating police to pull over for that..

3278. "stealth" or "cool" patrol cars

Yahoo group: CenTexComm
Date: 2006-09-26 20:05:50 UTC
From: Robert
Topic: 3271 Message: 3278

APD definitely has a "stealth" car or "cool" car as they would call it. I haven't seen the Travis County one but I'm sure they probably copied and got one too and perhaps Williamson C did also. I'm not sure about the law on not pulling over, but I think if I refused to stop, I wouldn't get very far. I would at least be on the phone with 911 if someone is trying to pull me over and I didn't thing they were legit.

Mike, aren't you a LEO? Shouldn't you know? Or do I have you
confused with someone else? (Sorry, I am HORRIBLE with names).

I've never been pulled over by an unmarked car. If it were me
personally I'd pull into parking lot, preferably one with lots of
people and if I doubted the authenticity of the "cop" I'd call 9-1-1
and ask.

I did spot a fake Marine once. I was living in Florida and he claimed
to have left his wallet on base and wanted money. He just didn't act
like a Marine. So I asked him who the Commandant of the Marine Corps
was. I got a glazed look, so I asked him what his fourth general
order was. He finally said, "Give me some %#$@! money." I laughed
and drove off. :-)

No, that's me - I'm TCLEOSE certified but not currently working anywhere... :) I posted the challenge to get someone else to look it up (and because the state recently changed the website the laws are posted on)... :)

> I respectfully submit,
> Police vehicles are not required to have an emblem of certain size in TX. If you find reference to this law or rule please reference it.

Just to play Devil's Advocate here... could it perhaps not be a "law" but a "code" or "regulation"? I'm not an attorney, but thinking many you won't find it in the state law books.

I'm thinking of an APD cruiser. It has the word "POLICE" in huge letters and a large badge. But Williamson County just says "Sheriff" with "Williamson County" in smaller letters. I can't picture an emblem on the cruisers.

I'm just rambling here. :-)

Here is the break-down.

§ 721.002. INSCRIPTION REQUIRED ON STATE-OWNED MOTOR VEHICLES. (a) The official having control of a state-owned motor vehicle shall have printed on each side of the vehicle the word "Texas," followed by the title of the state agency having custody of the vehicle.
(b) The inscription must be in a color sufficiently different from the body of the motor vehicle so that the lettering is plainly legible at a distance of not less than 100 feet.
(c) The title of the state agency must be in letters not less than two inches high.

Acts 1995, 74th Leg., ch. 165, § 1, eff. Sept. 1, 1995.

§ 721.003. EXEMPTION FROM INSCRIPTION REQUIREMENT FOR CERTAIN STATE-OWNED MOTOR VEHICLES. (a) The governing bodies of the following state agencies or divisions by rule may exempt from the requirements of Section 721.002 a motor vehicle that is under the control and custody of the agency or division:
(4) Department of Public Safety of the State of Texas;

§ 721.004. INSCRIPTION REQUIRED ON MUNICIPAL AND COUNTY-OWNED MOTOR VEHICLES AND HEAVY EQUIPMENT. (a) The office having control of a motor vehicle or piece of heavy equipment owned by a municipality or county shall have printed on each side of the vehicle or equipment the name of the municipality or county, followed by the title of the department or office having custody of the vehicle or equipment.
(b) The inscription must be in a color sufficiently different from the body of the vehicle or equipment so that the lettering is plainly legible.
(c) The title of the department or office must be in letters plainly legible at a distance of not less than 100 feet.

§ 721.005. EXEMPTION FROM INSCRIPTION REQUIREMENT FOR CERTAIN MUNICIPAL AND COUNTY-OWNED MOTOR VEHICLES.

Subsection (a) as amended by Acts 2001, 77th Leg., ch. 66, § 1
(a) The governing body of a municipality may exempt from the requirements of Section 721.004 an automobile when used to perform an official duty by a:
(1) police department;

(a) The governing body of a municipality may exempt from the requirements of Section 721.004:
(1) an automobile when used to perform an official

duty by a:
(A) police department;
(b) The commissioners court of a county may exempt from the
requirements of Section 721.004:
(1) an automobile when used to perform an official
duty by a:
(A) police department;
(B) sheriff's office;
(C) constable's office;

I've had this happen too. "I'm back from Iraq." "Really, what unit were you with?" "I was Special Forces man! Killed me lots of Iraqis!"

I know people who have served and NONE have bragged about killing the enemy.

From: navscanmaster@aol.com
Topic: 3271 Message: 3286

You are right about the markings according to the transportation code (it was posted already, so I won't repost it). They are not needed. Encouraged I suppose if traffic enforcement is your primary responsibility or assignment. We used to have a reserve deputy that would come in and take over the old investigator's car and make traffic stops at 3 in the morning. Had more than a few call in on 911 to ask "am I being pulled over by one of your officers?" while he was steadily coming over the radio excitedly "dispatch, he's refusing to stop, speed approximately 40 MPH!"
Soooooo......, I agree that it is probably a good idea to call in and find a lighted area, especially if dash lights is all that you see. Criminals and sickos are more and more motivated and crafty in their crimes these days....

3287. Reflashing the radios may present some new talk groups.

Yahoo group: CenTexComm
Date: 2006-09-28 19:44:23 UTC
From: Robert
Topic: 3287 Message: 3287

My sources are telling me that the radio techs are going and reflashing (reprogramming) a lot of radios

Renaming talk groups and possibly changing some, so expect to be hearing some changes from the original list.

Perhaps they took some of our suggestions like creating common event channels for everyone on the system.

3288. Discone Antennas

Yahoo group: CenTexComm
Date: 2006-10-04 05:29:43 UTC
From: d_s_chapman
Topic: 3288 Message: 3288

Hi to the group!

Does anyone have any experience with what I call the "better" discones? I already have the bigger-of-the-two Radio Shack discone in the attic. I'm looking at the Icom and Diamond full size units. Also, AOR has an interesting looking discone that's less than 1/2 the size of the Icom/Diamond.

FYI, has anyone noticed that the descriptions for the Icom and Diamond are exactly the same? Except, the Icom uses N connectiors while the Diamond uses PL-259. The Icom comes with coax (RG-58...boo!) while the Diamond is a "roll your own" for feedline. I would have this mounted in the attic (I have the space for a 5 1/2 foot antenna) and feeding it with RG-8 size coax (maybe even 9913).

Any feedback would be appreciated.

Dave

I don't have any personal experience with discones. They are low/no
gain, wideband antennas. I would think the larger antennas would be
more sensitive on lower frequencies, but I can't say for sure. The
only complaint I've ever heard about the Radio Shack discones is they
fall apart. However if it's in your attic that's not a concern.

So in summary, I wouldn't expect a huge performance gain with a new antenna.

3290. New changes on Firenet

Yahoo group: CenTexComm
Date: 2006-10-09 02:53:03 UTC
From: ExLngHrn@aol.com
Topic: 3290 Message: 3290

FYI, AMR is gradually dismantling its dispatching operations for fire departments in Travis County.

As of October 1st, Hudson Bend (600 series), Pedernales (800 series), and Volente (1400 series) are now dispatched by AFD on Firenet.

Expect to see/hear Manor (1200 series) and Travis County Fire Rescue (1100 series) on Firenet in the next few months.

I have not yet heard anything about North Lake Travis moving from their current dispatching arrangement with Lago Vista PD.

I don't know if anyone on here lives far enough west or not, but here's something to listen out for. The Middle Rio Grande Development Council is apparantly setting up a VHF-hi APCO 25 trunked system, with sites in Uvalde, Del Rio and Eagle Pass. They already have licenses for a bunch of frequencies. I'll be out there (Frio River at Concan) in March for the annual family trip and will report if I find any activity.
Speaking of the Frio, anybody on here ever make it out there? We've been going there for spring break for the last 9 years. We go to Concan because it's quiet, even during spring break.

Kevin

3300. Good Austin Texas Scanner Listening Weekend

Good Austin Texas Scanner Listening Weekend

This weekend the Rolling Stones concert will be in Austin Texas.
During the past months there has been a lot of discussion about
special event talk group upgrades with the Travis County TRS.

Can anyone post any known updated talk groups that will help in
monitoring the event? Also can anyone recommend any other specific
talk groups of interest that would expand in helping monitor the event
in the Austin Metro area based upon your pasted experiences?

Thank you,

Joseph

3301. The Rolling Stones but what about the Tollway

Yahoo group: CenTexComm
Date: 2006-10-21 14:57:16 UTC
From: Trebor1159
Topic: 3300 Message: 3301

I don't expect anything too unusual for the Stones Concert.
They reprogrammed Park police radios so they now have the APD Events talkgroup
so they may be on that or they may be using one of the Interops talkgroups.
They seem to be using the interops more. Park police has their own talkgroups too.
The event staff will prob be on rental radios somewhere in the 460's or 452's lower power direct.

What I am very curious about is the new tollroads, which have a fun run scheduled for Sunday and then the open Nov 1st. I have no information at all on frequencies for them. In Houston, all the toll plazas have radios and they have radio checks every freq hours. If someone blows through a plaza they sick the cops on them. Of course the tollways are gonna be free fro the fist month so perhaps the tollbooths won't even be manned for awhile but I suspect they will need radios to communicate. Maybe they are all on Nextel. It's still unclear to me who will patrol and work accidents on the tollways.

ACC police has moved to the Trunked System on talkgroup 3514.

991 3df D EVENTS APD Events
3396 d44 D INTROP A APD Interoperations A
3397 d45 D INTROP B APD Interoperations B
3398 d46 D INTROP C APD Interoperations C
3399 d47 D INTROP D APD Interoperations D
3400 d48 D INTROP E APD Interoperations E
3401 d49 D INTROP F APD Interoperations F
3402 d4a D INTROP G APD Interoperations G
3403 d4b D INTROP H APD Interoperations H
* in Zone I they have changed the interops and now numbered them from 1-16. Why in the world they think they need 16 interops talkgroups is beyond me.

Some new Talkgroups that we need to find the numbers for:
APD has added a talkgroup for John Sector (future)
Zone C
RW PD - rollingwood ?
CN - Com - i dunno
TCCC

Zone G Law 1-16
Zone H PSAF 1-14 don't know what this stands for Public Safety ??

Hey everyone, I just bought a Uniden BCD396T so I can FINALLY monitor the APCO25 system in austin. I just had one question though, how do you guys find out the new talkgroups and id's? Is this public info or does someone just have a good "source" Does anyone else have a 396T with audio gripes? The austin system sometimes sounds like everyone is talking underwater, or is this just the way it is because of the digital format. Thanks.

A really good source is the Radio Referance site. I'm running a Pro96
and all digital, except encrypted is very clear.Austin/Travis seems
to have a really good APCO25 system...

3306. The Tollroads are open.

Yahoo group: CenTexComm
Date: 2006-11-02 03:43:33 UTC
From: Robert
Topic: 3306 Message: 3306

The tollroads are open. Well at least some of them. I'm hearing DPS unit 6297 during the day and 6298 later tonight which do not seen like normal unit numbers. They have been sitting and running some traffic on the tollways; (Mobiles on 154.680) talking direct on 155.46. About 6pm there was a rollover on Wells Branch Pkwy and he came on and said he could assist, until the "trooper" arrived. Well what the heck was he? Just now abotu 9:30pm he's asking if they had decided if "courtesy patrol" units could assist a stranded female who was out of gas. The reply was that they have not hired for those positions yet. Do what? 6298 said he would stay with her since she was on a bad curve until her friend brought gas. I went to the grand opening celebration and they were all using Nextels. (The grunt workers and engineers) I don't know if it will always be that way. So much for using the Austin/Travis Co system. If anyone knows anything more please chime in.

3307. Austin Frequencies + trunked services going encrypted

Yahoo group: CenTexComm
Date: 2006-11-04 18:44:29 UTC
From: Bruce Sawtelle
Topic: 3307 Message: 3307

I've been a member of the group for a while and downloaded some of the freq lists in the Files area. However, with many of the services going to 800MHz and digital, I'd like to get a list of the "old" frequencies still active, primarily:

- Analog FM or digital frequencies (found KVUE's packet radio weather channel on 406MHz)
- Non-trunked or trunked
- All services (city, state, business, sleepy tool road attendants, etc, etc, etc)

I have a venable PRO-2005 and haven't migrated to a trunked radio, however, I still montior the Williamson county trunk frequencies "hit and miss" with the 2005

Also, I would like to migrate to a trunked scanner, but with all the plans to go encrypted for the city, what's the expectations that ANYTHING will be readable?? :-) What's the expectations

Thanks
Bruce

3308. Re: [CenTexComm] Austin Frequencies + trunked services going encrypted

Someone has put forth erroneous information. Only a very few sensitive talkgroups are encrypted on the Austin/Travis County Regional Radio System (and have been from the beginning), and there are no plans (and no approved budget funding) to "encrypt" the vast majority of talkgroups on the system. This was a conscious decision by the participating governments when the system was created to accommodate the news media and citizens who are interested in being able to monitor their government radio transmissions.

From: Myles Barkman
Topic: 3312 Message: 3313

Data signals in that area of the band are normally for airport navigational equipment status. This is usually around the bigger airports, like Houston's Bush and Hobby, DFW, maybe Love, etc.
Don't know why it would have anything to do with KXAN.
Here in the Houston area, I've heard signals on 408.825, 409.800, 410.075 and 410.450 MHz.
The band 169-172 and 406-413 can be used by low power (50 mW max) for special purposes.
409.675 is one of those freqs so perhaps it has nothing to do with the airport.
Check here for more info on these special freqs:
http://sujan.hallikainen.org/FCC/FccRules/1997/90/265/

Myles

3314. Air To Ground Phone?

Yahoo group: CenTexComm
Date: 2006-11-13 14:50:29 UTC
From: Harmon
Topic: 3314 Message: 3314

Hey.. I've noticed on 454.925 there is a continuous tone for some sort of air to ground mobile phone service.. a very old msg i found on the internet said it was skytel skyphone service.. but i'm sure it's been bought out by someone.. it has the regular +5.00 split as everything else in 400mhz.. I have heard the station ID before, but i'm just a tech and havn't bothered to learn code.. does anyone have any info on this? I've found that if you press the D button on your DTMF keypad a short "ring" is heard, followed by silence, then a short busy tone, then back to the control tone. Does anyone know who the service is through now or the dtmf command tones to use the system?? Someone said it might be part of the INTS system, but from all the freq. databases, it looks like it is NOT.

3316. Re: Air To Ground Phone?

Yahoo group: CenTexComm
Date: 2006-11-14 11:52:03 UTC
From: Harmon
Topic: 3314 Message: 3316

I got an e-mail from someone who mistook something in this msg.. to clarify.. i did not transmit on this frequency.. when i said "i found that when you transmit the d tone.." i meant this was something that i found on the internet when i was researching what the frequency might be.. i wouldn't transmit out of band because that would be illegal..

thx

Thanks for the list!
There were a few new ones I didn't have

Do you (or anyone) have some 800 MHz trunked frequencies (non-digital)?

Thanks again
Bruce

From: Bruce Sawtelle
Topic: 3307 Message: 3318

Thanks Mike for the update!

Can you point me to a list of frequencies that are "open" and analog?
Any/all public service frequencies welcome!

Thanks
Bruce

When in doubt, go to the source. Transportation Code:

§ 541.401. MISCELLANEOUS TERMS. In this subtitle:
(1) "Daytime" means the period beginning one-half hour before sunrise
and ending one-half hour after sunset.
(5) "Nighttime" means the period beginning one-half hour after sunset
and ending one-half hour before sunrise.

Mike :)

So I find myself in need of a scanner. I will NOT be scanning the A/TC digital system. I will, however, be scanning WilCo (Sheriff, EMS, county fire), Milam Co (Sheriff, EMS, Fire) and BellCo (Sheriff, EMS, fire).

Recommendations? Ideas on where to get a good deal on a used rig otehr than eBay?

Mike :)

99 percent of Bell County communications is on their EDACS system. Make sure you get a trunking scanner capable of EDACS.

I have a question for any LEOs (or lawyers) on the list.

This is raging on roadgeek. Texas has night speed limits. When does
it officially become "night"? Does Texas rely on civil sunset and
sunrise or is it as simple as "it's dark"?

I took some pictures along the new toll roads: http://www.flickr.com/

NOAA publishes the times. You can hear troopers ask dispatch for the sundown time (or sunrise time) on occasion. They're posted on most major weather sites.

Mike :)

3330. MyFox Austin | New Disaster Plan in Place for Downtown Austin

Yahoo group: CenTexComm
Date: 2006-11-21 03:57:14 UTC
From: Trebor1159
Topic: 3330 Message: 3330

<http://www.myfoxaustin.com/myfox/pages/Home/Detail?contentId=1546457&version=1&locale=EN-US&layoutCode=VSTY&pageId=1.1.1>
check out the above link. Cut and paste it to a browser if you have to.

-- Downtown Austin has a new plan in place for dealing with potential disasters that centers around more effective communication. The plan calls for one person in 13 downtown office buildings to have access to the police command post to exchange information. Authorities hope the new plan will help eliminate the spread of rumors during a disaster.

Basically the city, which decided to go digital to make it harder for anyone to monitor them, has suddenly decided that it would be a benefit if downtown buildings could know what is going on. In the olden days, actually they still could .. set aside a frequency where they can broadcast what is needed or have all the major building security radios programmed at CTECC and patch them into any talkgroup but instead have decided to have everyone take a radio that they have to pay for and a badge. The problem I see is that the one with the badge is likely to be out that day and if you have ever encountered APD at a road block, some of them are very very unfriendly and will not know anything. I have yet to see an APD officer working a road block that was on the proper fireground talkgroup or SWAT talkgroup actually monitoring the actual event. The radios in the video do not look like 800 Mhz trunked radios to me but they said they are $800 each. Sounds like someone did not get enough bids.
How about just using the downtown rangers to go to the effected buildings and talk to the guard on duty and let them know what is needed or what is going on? I'm just shocked that they are interested in eliminating the spread of rumors and wanting to do it this way.
Recently they had an underground electrical fire in the downtown streets and no one knew what was going on and how much danger they were in and it never was really explained later on.

Atlanta does this. They gave UHF radios to various building managers which is patched to an Atlanta PD talkgroup. I agree with Robert. Someone didn't get very good bids. Maybe $800 included a lifestime supply of batteries or something.

3334. Child playing with phone ties up 911 lines for 3 hours

Yahoo group: CenTexComm
Date: 2006-11-21 21:48:41 UTC
From: Robert
Topic: 3334 Message: 3334

In the olden days, when cell phones were legal to monitor, all you had to do was scan the inputs and they could have found it a lot quicker.

Child playing with phone ties up 911 lines for 3 hours <http://www.statesman.com/blogs/content/shared-gen/blogs/austin/blotter/entries/2006/11/21/child_playing_with_phone_ties.html>

Tuesday, November 21, 2006, 01:37 PM

From Round Rock police:

Child playing with phone ties up 911 lines for 3 hours; 911 misuse rampant

During the late morning on November 14, Round Rock Police Department's 911 operators faced the daunting task of tracking down a caller who made 49 calls to 911 over a three-hour period.

The calls were placed from a deactivated cellular phone -which could still be used to call 911, a common feature offered by most carriers. Since the calls were placed from an inactive account, the only clues to the caller's general location were area signals as they were relayed from tower to tower.

Police officers began a systematic search of southwest Round Rock, directed by police telecommunications operators as each subsequent call was received. Due to the nature of cellular phone signals and their shifting relays from the nearest available towers, the caller's location could only be narrowed to a 2-square mile area.

During some of the calls, telecommunications operators could hear voices in the background, and at one point heard conversation that sounded like a school environment; the likely location, considering the search area, was Bluebonnet Elementary School on Chisholm Valley Drive.

Police coordinated with school administrators, who confirmed that there was no emergency. Officers and school staff found a 7 year-old boy who placed the calls and confiscated the phone.

The incident further illustrates the problem faced by 911 centers regarding misuse and irresponsible use of the 911 system. Since January 2004, Round Rock dispatchers received more than 11, 200 calls to 911 where the caller hung up without giving further information. Only a very small percentage of those calls required an emergency response.

From January to October of 2006, nearly 3,100 calls to Round Rock's 911 center were abandoned without the caller giving any information. Of those, only about 5% required some type of formal police action beyond the initial response.

While nothing you plan to scan is digital today, that may not be true soon. There have been alot of discussion on the WilCo system about moving to a digital system tied in with A/TC. WilCo and A/TC got federal $$ to implement this. I know some of the city departments were in an uproar a couple of months back because WilCo told everyone they were going to have to switch, and oh yea, send us lots of money for the privledge.

Yeah, I disabled attachments a few years ago during a virus scare.
Can you upload it to the files section?

<SOAPBOX>
They need to do something about the McNeil/Parmer intersection. I
have to pass through it on occassion. The problem is the volume of
traffic dictates long light cycles, so when the lights turn yellow,
even red, people continue going through the intersection because they
don't want to wait 3, 4, 5 minutes for another green. Not to mention
the nearby high school adding to the mess.

3353. Maybe someone can splain to me...

Yahoo group: CenTexComm
Date: 2006-12-05 18:03:43 UTC
From: connectivity1958
Topic: 3353 Message: 3353

Trying to figure out what is going on, but no one can seem to tell me.
About the time ESD 6 and ESD 14 came onboard, AFD county dispatch started to have some problems. First it was South Alert locution and then Firenet. Some of that seems to be resolved, but I have a question or three.

I am in a department that is using a mix of 800 and VHF equipment. I have a vhf unit and I noticed on Firenet that I often only get one side of a conversation. I assume this means that
a solid patch between 800 and VHF does not exist anymore? What I receive varies between dispatch and whatever unit they are talking to. Sometimes everything is great and then sometimes I just get the mobile unit but not AFD responding to them. It sounds as if AFD is replying on 800? If so, why am I hearing the mobile unit? Is this a known issue, or just me?

Also, it appears from my listening that locution is not working at all on VHF? Seems all dispatching is by voice now. Just between you and me, I prefer the voice dispatch to locution.

Last question....since moving to AFD we have lost medical priority dispatch that was set up a
year or so ago. No more priority 1, 2, 3, 4, 5 etc. It wasn't always accurate, but I appreciated knowing a medic had dispatched the call according to protocols and given it a priortiy.

The only one I know the answer to is the last one. EMS Comm gives the MPD code (Priority 1-5) when they dispatch on either EMS Control or EMS County. Fire Dispatch doesn't give the MPD priority. I don't know why. But then, I don't rely much on the MPD code...

3355. Firenet simulcast and EMS Priority codes

Yahoo group: CenTexComm
Date: 2006-12-05 20:17:10 UTC
From: Robert
Topic: 3353 Message: 3355

The 153.95 FireNet and the 154.175 County Locution are working but seem to be very low volume and a weaker signal at times.

Both of them are "patched" to 800 Mhz talkgroups, but the patching isn't always perfect. Sometimes words or parts of words are missed. Sometimes it has to do with how many talkgroups are patched in and what buttons the dispatcher presses. Sometimes I only hear the dispatcher and not the mobiles, sometimes I hear both. AFD is a big time creature of habit and they are not prone to doing new things. They probably are just responding or talking on their Firecom North or Metro North and not necessarily FireNet. Speaking of that, I live north and I have never heard any AFD unit come up on Firecom South. It that only because I live north? They will say they are on Firecom South but they will be showing on the talkgroup for Firecom North. I just assumed that Firecom North and South are patched and always have been. I'm not sure. I wonder if anyone south hears only Firecom South being used and not Firecom North. You also have to remember that they all have the Computer Data Terminals, so a lot of the responding and stuff is all done by mashing a button on the CDT. Units no longer have to go "enroute" via the radio anymore. The dispatch is listening to a lot of talkgroups at once, so even though he told them to respond on FireNet, they may be coming up on Firecom North or Metro North and talking. If so you may only hear the dispatcher simulcasting on FireNet and not the mobile units. I know it's hard to explain, perhaps someone with more insight could tell us better. I know how it's supposed to work in the manual may not be the actual way it's working in real life.

It sounds like some excellent questions for the com people out there and perhaps we could get a group tour out of this.

As for EMS, it's all about the CAT's. Everything to them is Cat 1-4. They almost don't seem to care if the patient is breathing, bleeding or conscious. All they seem to care about is CAT 1, CAT 2, CAT 3 or CAT 4. I think the priority codes have more to do with dispatching than anything else and they don't use them as much on the air anymore, although I still think every call is assigned a priority and they will see that on the CDT's. In Lago Vista, where my mom lives, the Lago Dispatcher always gives out the priority so I know it exists. (I think she gets it from the CDT in dispatch) I'm pretty sure EMS still gets into situations with "no units available" but you don't hear that on the radio as much anymore for obvious reasons. But the priorities have to do (I assume) with what call the next available ambulance gets, depending on the priority and the location of course. Whoever is dispatching the call, should be able to tell you what priority it is. I assume that would be AFD. Perhaps they just need to get with AFD and have them relay all the information about the call. Unfortunately a lot always gets lost in the shuffle: EMS takes the call but types an RA (request assist) for AFD to dispatch the volunteers. AFD is on the Locution system so the computer voice probably isn't programmed to give the call priority. It does seem like that could be easily changed. If anyone could give a brief tutorial on the Austin EMS unit numbering system, that would be great also. Medic 18 and Medic 1501, huh?

It's good that you point all this out, cuz any clarification will certainly help everyone out.

3356. train accident

Yahoo group: CenTexComm
Date: 2006-12-06 18:57:15 UTC
From: David Litsinger
Topic: 3356 Message: 3356

I note on the news of the train incident in north austin where a woman was lying on the tracks and was run over by a train 'speeding' down the track at 70mph, later corrected to 60mph, and the conductor said he could not stop the train in time! It's the engineer in the cab, not the conductor, and the train runs just about or at the speed limit set by the RR and local laws, and no, the train cannot stop just because you applied the brakes. the tv spot seems to indicate that it was an amtrak by the type engine. which means at 60mph he could probably have stopped in half a mile. A long freight at 60mph would take a mile or more. Oh well, idiots lay on the track expecting to be turned into hamburger meat are seldome dissapointed.
Dave.

OH, my dad, UPRR locomotive engineer, years ago stated the only thing that a head end crew feared the most was broadsiding a tanker truck. sure-fire way to kill all the head end crew.

Who is to blame? Some of the information comes from the PIOs on the scene. So, it is relayed back to the newsrooms as photographers get the info out in the field.

Subject: [CenTexComm] train accident

I note on the news of the train incident in north austin where a woman was lying on the tracks and was run over by a train 'speeding' down the track at 70mph, later corrected to 60mph, and the conductor said he could not stop the train in time! It's the engineer in the cab, not the conductor, and the train runs just about or at the speed limit set by the RR and local laws, and no, the train cannot stop just because you applied the brakes. the tv spot seems to indicate that it was an amtrak by the type engine. which means at 60mph he could probably have stopped in half a mile. A long freight at 60mph would take a mile or more. Oh well, idiots lay on the track expecting to be turned into hamburger meat are seldome dissapointed.

3363. The STARflight crew experienced an au dible “pop”

Yahoo group: CenTexComm
Date: 2006-12-17 21:55:34 UTC
From: Trebor1159
Topic: 3363 Message: 3363

Date: 12/17/2006 0630 CDT

Program: Travis County STAR Flight
7800 Old Manor Rd.
Austin, Texas 78724

Type: EC145
Tail #: N378TC
Operator/Vendor: Own Part 135

Weather: Clear. Not a factor

Team: Pilot, Flight paramedic and pediatric specialty team members . No injuries reported. No patient.

Description:
STAR Flight 2 departed at 0620 local time to Waco Providence Hospital, with flight paramedic and two members of the Children's Hospital of Austin pediatric transport specialty team aboard.

Weather at the time was VFR for the entire route, with good visibility and 8 knots of wind from the southeast.

At ~0634 the crew experienced an audible ?pop?, simultaneous with moderate to severe airframe vibration. The vibration was audible in the cockpit and aft cabin as well. About 5 seconds after the onset of vibration the tail rotor gearbox chip caution light came on. No other secondary indications were noted.

Austin Approach Control and Austin-Travis County EMS Communciations was informed of the problem, that the crew was aborting the mission and would be landing at the Georgetown (Texas) airport. Upon arrival at the airport a uneventful no-hover landing in a grassy area, touching down at ~0637 local time. Shutdown and egress were normal.

Initial post-flight inspection revealed a dynamic weight missing from one of the tail rotor blades. It appeared initially that the mounting spindle for the weight had broken. Additionally, the hinge pin on the intermediate gearbox access hatch was displaced about three inches upward from its normal position. No other abnormalities were noted at that time.

The aircraft is currently being recovered for further inspection and repair.

STAR Flight resumed service in STAR Flight 1 (EC145) after an inspection of the tail rotor assembly.

It'd be nice if they could upgrade to one of these (the NOTAR system,
not the specific helicopter shown).

Ok..I hate to say this but this can happen. I work for DS2 on Ft.Hood as a helicopter mechanic I see parts failure.
When I was stationed in South Korea I was a Powertrain repairman in a CH47-C chinook unit when I was aboard a aircraft on the ground and the engines were just shut down and the rotors were coasting down when the "c-box" failed.You would be amase the amount of parts that are inside of a gearbox. On the EC145 Pull the tailrotor,disasemble, inspect,replace the bad bladeand anyother parts that are needed like all the self retaining nuts and bolts, static balance, reinstall and dynamic balance and your back in service.FIx the fairing too.
See if there are any AD's or service bull's that may effect this.

--- In CenTexComm@yahoogroups.com, "Robert" <trebor1159@...> wrote:

> As for EMS, it's all about the CAT's. Everything to them is Cat 1-4.

>Whoever is dispatching the call, should be able to tell you what priority it is. I assume that would be AFD.

>If anyone could give a brief tutorial on the Austin EMS unit numbering system, that would be great also. Medic 18 and Medic 1501, huh?

[Johnson,A: EMS still uses Priority Levels of 1-5 on all our calls. These Priorities come directly from patient symptoms and complaints. We use the Medical Priority Dispatch (www.prioritydispatch.org) system to triage incoming 911 calls and assign priorities. Having multiple levels of priority allows our dispatchers to divert units from lower priority calls (minor injuries) to higher priority calls (cardiac arrest) etc. AFD (currently) only differentiates Code 1 (non-emergency) or Code 3 (emergency) for their medical calls. That may be changing in the future, as we would like the ability to divert AFD and ESD companies from lower priority calls as well. Currently with AFD and the ESD's it's the company officer on the responding unit's decision to divert if they are aware of another call in their immediate area.

The "Cats" mentioned are actually Trauma Categories and there are only 3. The symptoms and/or mechanism of injury descriptions are available in the COG's (for those of you who aren't system 1st responders, a copy is available @ www.atcomd.org

The new unit numbers you are hearing ties back to EMS moving a group of trucks off 24 hour shifts to 12's. M1501 is the day shift unit identifier for Medic 15 and 1502 is the night shift unit identifier. They use the same equipment, we just changed the number sequence to make it easier to track which crew was on-duty.]

That's interesting. AFD doesn't have Engine 15A, 15B and 15C to track which crew is on duty - why would EMS need different unit numbers? I'd suspect it's more about "UHU tracking", or unit hour utilization... in other words, breaking down how much "more efficient" a unit is on 12 hour shifts vs. 24 hour shifts.

Full-blown SSM for 12-hour units isn't far behind, I'd suspect... for laypeople, that means ambulances "posted" in Walgreen's parking lots rather than at stations while dispatchers and computers try to guess the location of the next call. I wonder if AFD would go for that - "Engine 21, need you to post at Burnet & Anderson in the Exxon parking lot until more north units clear up!"

Mike :)

AFD also isn't tracking multiple crews shift change at multiple times throughout the day. We stagger our shift changes in 30 minute increments over a couple of hours. If we had 1 shift change per day and everyone did it at noon, we'd not need to change unit numbers either. Comparing our shifts to AFD is now comparing apples to oranges.

As a sidenote... There are no plans to move Austin-Travis County EMS into a SSM design. We will continue to shuffle units to provide the best coverage possible, as we have always done, but all our units will have a primary station assignment.

AFD does have a move-up plan as well. I'm not familiar with all the specifics, but when there is a multi-alarm fire they will shuffle units to different stations to maintain coverage.

Adam -

I guess we'll agree to disagree for different reasons... from the outside, everything EMS is doing points towards SSM. Things like staggered shift starts, the move to 12 hour shifts, the differentiated 12-hour unit numbers, etc. all point to the hallmarks of a Stout-based SSM (system status management) system. In fact, the comparison to an AFD "move-up" plan is a red herring... AFD doesn't "move up" to street corners like EMS does, and EMS doesn't "move-up" or "fill in" or "back in" at other stations like AFD does. Oh, and two of EMS' top managers either came from strong SSM systems (Fort Worth) or are strong proponents of the method.

Bottom line? SSM harms crews and and a way to staff a system with fewer resources than is needed, or IMHO, safe. It's designed for "for profit" EMS, which is a scary thought in its own right.

For what it's worth, congratulations on your recent promotion! And it's not personal (and I certainly don't think you're being deceptive or dishonest, nor do I expect any confirmation from anyone that this is happening). It's likely that A/TC EMS doesn't recognize the way it's moving, or how it looks to those of us who have studied EMS management and system modeling practices. It's not hard to see that A/TC is understaffed (and the city calling for "public safety" budget cuts isn't helping, nor is the "boot camp" academy that drives away many seasoned paramedic applicants)... it's just sad. A/TC EMS used to be a model system with progressive medical practice and the envy of the state... now it's becoming "just another urban EMS," and knowing its system providers and their personal dedication, I hurt for them.

Mike :/

3371. Area Code 512

Yahoo group: CenTexComm
Date: 2006-12-19 20:33:56 UTC
From: Mike Reed
Topic: 3371 Message: 3371

Anyone know when the overlay for 512 is supposed to happen, or how saturated the area code is? The most recent documents I can find just say "sometime after 2003."

A little history on 512:
Date Started January 1 1947
One of the original area codes
Major Changes: Split to Area Codes 210 on November 1 1992

Mike :)

3372. Re: Area Code 512

Yahoo group: CenTexComm
Date: 2006-12-19 22:20:12 UTC
From: Russell Adams
Topic: 3371 Message: 3372

The "plan" was to overlay area code 737 on top of 512 and implement
10 digit dialing. The PUC was to set the time line. Apparently,
512 had plenty of numbers available at the time to put off the
overlay. I do not know the current status of number availability
right now for 512, but all this stuff is `somewhere' on the NANPA
site. 737 is still reserved for the overlay/10 digit dialing plan.

http://www,nanpa.com

Planning letter for 512: http://www.nanpa.com/pdf/pl-nanp-233.pdf

We were supposed to get 737 overlaid on 512, but this was put on hold.
There's less need for new area codes due to several reasons. One,
RBOCs can issue telephone numbers in clumps of less than 10,000. It
used to be if "Bob's Phone Service" wanted to set up shop in Austin,
Southwestern Bell (aka SBC, aka AT&T) had to assign them 10,000
numbers, say 512-555-0000 though 512-555-9999. The FCC changed the
rules so if Bob only needed 100 numbers, that's all he'd get. On top
of that, dial-up modems and FAX machines have faded easing the need
for a second phone line. The cellular market is now saturated and
people can take their numbers with them. There's less demand.

The western edge of 512 is now 325. 737 has been cancelled and there
are no plans to overlay or split 512 in the near future.

Mike, you're certainly entitled to your opinion... However I do believe that I'm in a better spot to provide factual information about the direction my department is going. You're just speculating and trying to formulate opinions with very few (if any) facts. We're very well aware of the negative effects of SSM and have no intention of moving that direction. I've done my fair share of studying EMS management philosophies too. :)

On a sidenote, my reference to AFD did not mention them moving to street corners, I stated that they move into stations and that it is directly tied to multi-alarm fires. It's not a red-herring... It's stating the facts. We are different departments, with different missions and different business models... No doubt about that.

Lastly... ATCEMS IS still a model system. We have experienced quite a bit of growth over the last few years and had to deal with the associated growing pains. Our academy process is actually embraced by those who actually participate in it and raved about. It's definately not for everyone, as some have discovered, but the vast majority of our cadets really enjoy the process. Seasoned medics & new alike. I've spent the last 2 years as the Communications Training Captain, directly interacting with these cadets... So again, I can tell you the facts. Are there people who don't apply because of the "horror stories" they hear from people like you? Sure... But if people base their opinion of our academy on folks who weren't sucessful in the process or have never even tried, then they are not making an informed decision. I assure you... The process is not as bad as you make it out to be.

My intent here was simply to provide factual information to the members of this list that were asking questions specifically about EMS. Nothing that I am saying here is personal opinion or an uninformed guess/speculation.

Hope you all have a Merry Christmas! Take care!
Adam J.

From: Trebor1159
Topic: 3379 Message: 3379

http://www.radioreference.com/modules.php?name=RR&aid=17
As far as I know, ESD 4 (Fire Control) is still using 154.400 as tac

Dispatching (if done by AFD) should be simulcast on 154.175 and
units may go responding on 153.950

FROM: mike_cll@...
DATE: Sat, 23 Dec 2006 15:10:48 -0000
SUBJECT: Travis County ESD #4?

Hi-

Can't seem to find info on Travis County Emergency Services
District #4, & where they're dispatched. I heard they are on
the Travis County DTRS, but don't know any TGIDs, &
RadioReference doesn't list a TGID for them. Any info would
be appreciated.

Mike

3382. How County ESDs are disptached by AFD

Yahoo group: CenTexComm
Date: 2006-12-24 01:41:23 UTC
From: Trebor1159
Topic: 3382 Message: 3382

If ESD #4 Fire Control is on the Trunked System, they are being dispatched by AFD.
If so then dispatches are on this talkgroup:
1162 48a D TCLOCU AFD County "Locution" (Patched to 154.175)
or this one:
1147 47b D AFD (Dispatch (453.275 MHz)
Then units are told to respond on:
1122 462 D METRON AFD Metro North (ESD's North) or on:
1142 476 D METROS AFD Metro South (ESD's South)

If it's a "Box Alarm" or multi alarm fire, then they will most likely be given a B channel assignment.
They are supposed to use the ODD channels first and the EVEN ones are for 2 alarm staging assignments.
They used to call these Blue 1 to Blue 16, but now they are justreferred to as B1 to B16
1371 55b D FC B01 AFD Blue-1
1372 55c D FC B02 AFD Blue-2
1373 55d D FC B03 AFD Blue-3
1374 55e D FC B04 AFD Blue-4
1375 55f D FC B05 AFD Blue-5
1376 560 D FC B06 AFD Blue-6
1377 561 D FC B07 AFD Blue-7
1378 562 D FC B08 AFD Blue-8
1379 563 D FC B09 AFD Blue-9
1380 564 D FC B10 AFD Blue-10
1381 565 D FC B11 AFD Blue-11
1382 566 D FC B12 AFD Blue-12
1383 567 D FC B13 AFD Blue-13
1384 568 D FC B14 AFD Blue-14
1385 569 D BLUE 15 AFD Blue-15

3385. STARFlight out of County being encrypted?

Yahoo group: CenTexComm
Date: 2007-01-03 03:23:41 UTC
From: Trebor1159
Topic: 3383 Message: 3385

I do not know if they will decide to encrypt that talkgroup. It would be up to them to do that and there is NO way to decode encrypted talkgroups. I can understand why they may want to do that but it's a waste of money. #1 I'm not aware of anyone giving out any sensitive patient information and it would be illegal to do so anyway. #2 It's a waste of money because they could just use a cell phone if they need the communication to be that private. It never made sense to me anyway why, if they have all the cell phones, that they still use radios to relay patient information. #3 the encryption is not that reliable at all with infrequent users such as nurses walking by an ER radio, so they will not know how the encryption works all the time. That is not good because when all else fails (Katrina) they need to be able to turn off the encryption if they have to.

on Nov 4th we got this email:

Someone has put forth erroneous information. Only a very few sensitive talkgroups are encrypted on the Austin/Travis County Regional Radio System (and
have been from the beginning), and there are no plans (and no approved budget
funding) to "encrypt" the vast majority of talkgroups on the system. This was a conscious decision by the participating governments when the system was
created to accommodate the news media and citizens who are interested in being
able to monitor their government radio transmissions.

3387. Recommendations for scanner for Austin Area

Yahoo group: CenTexComm
Date: 2007-01-03 23:42:23 UTC
From: Bruce Sawtelle
Topic: 3387 Message: 3387

With the continued dropping of analog channels (waiting for the TV audio freqs that are the next ones on the list), I'm consdiering a new scanner for public service, ham radio, etc. (Currently using a PRO-2006)

What are the group's recommendations for a resaonably priced digita-capabile scanner. Here are a few questions (that I should have researched on the web first,huh?)

- What do I gain if I get a scanner that is APCO-25 capable?
- What's the advantages of the various trunking scanners (I've seen "triple,", etc)?
- I've been looking a the R/S, Bearcat, and Uniden scanners. Any other suppliers worthwhile?
- I would like to get PD, EMS, Fire, Sheriff, anything/everything :-)

Thanks
Bruce

The advantage to an APCO-25 capable scanner is that you can monitor Austin's digital trunked system which is including a lot of the surrounding public safety in Travis County as well. Additionally, DPS is eventually migrating to APCO-25 VHF digital.

I'm very happy with my Uniden BCD396T.

You may be very content with the performance of the Uniden but I am not happy about the prices of either the Uniden or the R/S. .

What are the odds (everyone give their best guesstimate now) the prices will come down to a more reasonable level? If so, what's a ball park figure to aim for in terms of time to wait it out and see.

I don't want to miss out of more action but the odds are I will buy and it will be less AFTER I buy. <G>

BTW - DPS has moved to digital out here in the boonies already. I understand the major cities are already or just about next.

Ken

3391. Recommendations for scanner for Austin Area

Yahoo group: CenTexComm
Date: 2007-01-04 12:27:35 UTC
From: Robert
Topic: 3387 Message: 3391

The concept of APCO-25 is a very loose definition
Leander PD has P25 radios
Austin PD has P25 radios but they can't even talk to each other. They
are not even on the same band.

Only the newest (expensive) radios will monitor the Austin/Travis County
System.
Radio Shack makes the Pro-96 handheld and the Pro-2096 base Radio
Uniden/Bearcat makes the BCD296T, BCD396T handhelds and the BCD796T,
BCD996T base radios.
The radios can be found cheap on www.ebay.com and it pays to shop around
with online vendors for the Uniden models. I am not aware of other
radios or brands that will also decode digital trunking.
If you want "everything" then get the newest model out there.

Uniden BCT396D scanner prices as of 12/12/06:

http://www.usascan.com/files/bcd396T.cfm Communication Electronics $499.95
(includes $30 S&H)

http://www.bearcat1.com/item0047.htm $502 (includes S&H) Cash, personal
check, money order price Hobby Radio Stop $527 (includes
S&H) credit card price

http://www.bearcatscanner.com/ > > > $509.91 (includes $8.00 S&H)

http://xtremedeal4u.zoovy.com/c=NvlAVXxmjIvJZDXVrMveXxiEG/
$511.99 (includes $12 shipping)

http://www.national-electronics.com/unbc.htm $528.78 (w/ $13.83 shipping)

Scanner Master $529.95 (including $9.95 S&H)
https://www.scannermaster.com <https://www.scannermaster.com/>

Scanner World <http://www.scannerworld.com/template.asp?viewproduct=BCD396T>
$523.74 (including $13.75 S&H)

Grove $541.90 (incl $16.95 S&H) <http://www.grove-ent.com/BCD396T.html>

<http://www.scannersunlimited.com> $549.95 (shipping price not listed)

I doubt the prices will drop anytime soon. The RS PRO-96 is still listed for $499.00 and it is an older model. As always, don't buy from RS ulness it is on sale! They are constantly having sales on the PRO-96 / 2096.

It's actually a pretty rigid definition. The problem with Leander is
they encrypt. They do use different bands, but that would be a
problem even in the analog world.

Uniden cranks out new scanners about as fast as Apple cranks out new
iPods. Do check eBay and there are several sources for new scanners.
Good luck!

Radioreference.com should have the most updated information. I heavily rely on it's accuracy and have found little errors. The good thing about it is that there are so many users, it's hard for someone to come in and provide erroneous information as there will usually be someone there to catch it.

Glenn <kd5dga@...> wrote:
Is the frequency list on Radio Reference good up to date copy?

3400. Register now for Free Landing Zone Class Feb 17th

Yahoo group: CenTexComm
Date: 2007-01-12 17:11:05 UTC
From: Robert
Topic: 3400 Message: 3400

* * * * * R E G I S T R A T I O N N O W O P E N* * * * *
Event Date: 02/17/2007
Arrival of the Star Flight, PHI STAT Air, Air Evac Critical Air, and the TX DPS helicopters are expected between 8:00 am -8:15 am and will be on display. Communications with Helicopter pilots will be conducted on Intercity frequency 154.95 between 8:00 am - 8:15 am
LZ Class: 8:30 am - 12:30 pm
Skills Sessions: 2:00 pm - 4:00 pm
Price: FREE
Location: Shoreline Christian Center
15201 Burnet Rd
Austin, TX 78728-3505
Pre-register On Line NOW to be eligible for DOOR PRIZES! www.mset-tx.org
FREE / NEW - Basic Airway Management Training, LZ Communications Workshop and General Basic Skills Practice.
Class Descriptions: Landing Zone:
STAR Flight will conduct training on selecting and preparing an emergency Helicopter landing zone, pilot communication, helicopter approach and patient packaging.
Hands on patient loading and unloading demonstrations will be held at 10:30 am.
Basic Airway Management:
Hosted by PHI STAT Air Georgetown
Review basic bagging, ventilation and ventilation with an advanced airway in place. Instruction and hands-on.
This class is targeted to medical personnel and is limited to the first 50 to sign up.
LZ Communications Workshop:
This workshop will encompass a host of topics from the initial call to flight completion and all phases in between.
Discussions will include methods of contacting the helicopter and pilot communication
While not required, it is requested that those who have scanners or HTs to bring them for this session.
Workshop only -- No CEs
General Basic Skills Practice Workshop
Hands-on practice will cover basic patient assessment and practice taking general vital signs including taking blood pressures and blood sugars.
workshop only -- No CEs
Target Participants: All emergency response personnel, law enforcement, fire, search and rescue personnel, Boy & Girl Scouts, Military Academies and Amateur Radio Operators
The class is FREE and participants will earn 3 CE (continuing education) credits from either DSHS or TCLEOSE for the LZ Class and 2 CE credits upon successful completion of the Basic Airway Management Class.

* The class is scheduled to begin at 8:30 am sharp. MSET members will be on site shortly after 7:00AM.
* The class will continue rain or shine with expected attendance of between 250-450 participants.
* Please PRE-REGISTER for the class at www.mset-tx.org.
* Coffee & donuts will be available for a small donation.

3401. Talkgroups for Sand Truck and Road and Bridge Crews

Yahoo group: CenTexComm
Date: 2007-01-15 04:55:27 UTC
From: Trebor1159
Topic: 3401 Message: 3401

Stormwater Management is on 377 and 378 they have been busy with all the rain checking low water crossings and cleaning storm drains.
The City Sand Trucks are on talkgroup 540
The County Sand Trucks should be about 1886
Tx Dot Sand Trucks last used the LCRA's system
http://www.radioreference.com/modules.php?name=RR&sid=48&d=&opt=all_tg
10-035 for Austin
10-081 for Williamson Co
10-085 for Hays Co

3402. Re: [CenTexComm] Talkgroups for Sand Truck and Road and Bridge Crews

Yahoo group: CenTexComm
Date: 2007-01-15 13:50:01 UTC
From: John Mayson
Topic: 3401 Message: 3402

Thanks Robert. I had no trouble coming in to work. I drive only on surface streets. I heard about an accident and request for sand trucks from AFD at Research and McNeil. I looked to my right and saw the AFD units. According to KXAN there's an 8 car pile up.

Travis County units are starting to report icing as of 0730.

Be careful out there!

John

3403. updates with website and more TxDOT

Yahoo group: CenTexComm
Date: 2007-01-17 04:29:59 UTC
From: Trebor1159
Topic: 3403 Message: 3403

47.08 is still being used by TxDot in the Hill Country like in Blanco
and Burnet Co hear them asking for Hwy 281 and Hwy 71 to be sanded.
Also picking up a new TxDot talkgroup 10-091 being used on the new
Tollway State Highway 45 (Loop 1 near La Frontera) Sand Trucks

Also heard a lot of radio traffic on Talkgroup 1002 which I have as APD
Training 1 but it was and Lieutenant and a Patrol Sgt talking about
shifts and calling in extra people, etc.. appears to be a supervisor
talkgroup.

AFD to Austin Energy on 3402 Interop F7
AFD C12 1169 is also Austin Energy
AFD C11 1168 is Street & Bridge (Sand Trucks)

Some good web links:
If you live in the City of Austin and want to update a cell phone for

From: Glenn
Topic: 3403 Message: 3405

TXDOT is busy up here in Bell County on the VHF low and high frequencies.

Last night listening I found pretty fascinating TXDOT had problems getting the roads sanded in a timely manner. At one point a truck had to take a long way around since he had problems with traction. Now I would think that a 12 yard dump fully loaded with sand should have enough weight to make traction. I was proven wrong.

Ok, sorry about that...We were working on that stream the other day and had it back up...

We have having some difficulty with the network running that stream. As soon as we can get the rest of the bugs worked out, we'll have it back up and running. Stay tuned to http://www.scancentex.com for further updates

Thanks,

Aaron

From: Myles Barkman
Topic: 3411 Message: 3413

There are many more freqs licensed than are actually used.
In the Houston area, 159.900 is used. They are also able to used the
Houston ISD EDACS trunk which has some talkgroups patched into the
Montgomery Co EDACS system.
Bryan uses 159.900 too with a different PL.
Fort Worth uses 159.9675 and Dallas has 159.990 MHz.
Don't know about Lufkin or West.

Myles

3414. Icom IC-R10 for sale

Yahoo group: CenTexComm
Date: 2007-02-12 19:25:33 UTC
From: Phil
Topic: 3414 Message: 3414

Hi there,

Sorry for the intrusion here.

I am not 100% sure that I want to sell this yet, maybe a good offer will make my mind up for me! I hardly use this anymore...

Icom IC-R10 Receiver. Excellent condition, very clean. The only issue is the rubber cap that sits over the charger port is missing, not a big deal though. I used this unit to cover airband comms as well as shortwave. I live in Austin TX and was able to pick up the broadcast from Australia a few times - pretty good. I also took it to several airshows and it was a great performer. Has some nice features including band scope and alphanumeric memory. You can find out more at Icom's website.

Comes with: standard rubber duck antenna, telescopic whip (much better performance with this), wall charger, manual Scanner-to-PC cable and Icom Cloning software. I will also leave all of my Centex Freqs in the unit if I sell it locally (aviation, rail, other interesting things...)

Make me an offer if you are interested, entice me to sell it! I saw one of these sell on eBay for $308 this morning, and a few others are out there and climbing price-wise to around the same area.

Buyer pays shipping from central Texas, otherwise happy to meet somewhere (within reason, say 20 miles from north Austin) to hand off.

If interested, please email me at intelhawk@... with your offer.

Thanks for looking!

3418. Williamson County 911 System Down

Yahoo group: CenTexComm
Date: 2007-02-22 18:48:38 UTC
From: trebor1159@austin.rr.com
Topic: 3418 Message: 3418

Williamson County 911 System Down
Some emergency calls went unanswered; new calls being rerouted to other call centers.
(CBS 42) GEORGETOWN Williamson County officials announced Thursday morning that the county's 911 system is not working. They said Wednesday, just after 8 p.m., the 911 telephone switch in the Williamson County Communications Center "suffered a complete equipment failure."

The system that reroutes incoming emergency calls to other 911 centers in case of a switch failure also experienced some failures. Officials say an undetermined number of incoming 911 calls went unanswered.

Officials say 911 service restoration is expected later today. In the mean time, emergency calls are being rerouted to the Cedar Park and Georgetown Police Department communications centers. Emergency callers from other areas of Williamson County may hear calls answered with "Georgetown 911" or "Cedar Park 911," but assistance should be dispatched as normal.

If callers from the unincorporated areas of Williamson County or in the cities of Florence, Granger, Hutto, Jarrell, Liberty Hill or Thrall experience any difficulty when placing a 911 call, they may call (512) 869-5621, a number that will be answered in the Williamson County Communications Center.

3419. RadioShack.com - Phones & Radio Communications: Scanners: PRO-96 Digital Trunking Handheld Scanner

Yahoo group: CenTexComm
Date: 2007-02-25 21:03:45 UTC
From: Trebor1159
Topic: 3419 Message: 3419

Radio Shack has released another DSP upgrade (1.4) for the Pro-96 and
Pro-2096 scanners.
to find out what version you have, turn on the scanner and while the
welcome screen is displayed, press 3
and look at the 2nd line. The newest upgrade will say:

DSP-App:U1.4 <-- 1.4 is the newest version just released 2/20/2007

If you need the update, you can get it here:
http://www.radioshack.com/product/index.jsp?parentPage=search&summary=summary&cp=&productId=2036238&accessories=accessories&kw=pro-96&techSpecs=techSpecs¤tTab=summary&custRatings=custRatings&sr=1&features=features&origkw=pro-96&support=support&tab=support

3422. The Pro-96 and Pro-2096 are on sale at Radio Shack for $399.95

Yahoo group: CenTexComm
Date: 2007-03-01 12:45:41 UTC
From: Robert
Topic: 3422 Message: 3422

Both the Pro-96 handheld and the Pro-2096 base are on sale at Radio Shack for $399.95 ($100 off) Both of these radios will monitor the Austin/Travis County Digital System. They can be had cheaper from other dealers at times and on www.ebay.com but I am constantly asked where someone can walk into a store and pay cash today for a radio as some people do not have credit cards and do not trust mail order items. This is it. if you snooze, you loose.

Back by "popular" demand, BCSScan is back on Yahoo Groups. This group supports the oasis between DFW, Austin and Houston.
The owner let Yahoo automatically delete this group because of inactivity last year.
For a group to remain in active status, it must have one post made every 90 days.
Since it has been created fresh, all the archives are gone.
I'll try to start off the group's files section with some lists I have.
Let's try to keep the group going. There are plenty of radio systems to talk about in that region that require updating at least every 3 months.

Regarding the toll roads, they are patrolled by DPS on regular DPS
frequencies.. base 155.46 and mobiles on 154.680
If there in an incident on the tollway, it will be worked by DPS. I have
not heard any communications with the tollbooths
except for the TxDot crews on the LCRA system such as Courtesy Patrol
and Sand Trucks.

A little off-topic here, but has anyone driven 183A? Did they put the smooth side down? That's a tooth rattling ride. I hope they're not planning on leaving the highway in that condition.

I am not sure about what they will do and I have not driven on it yet.
However out here on the Toll Road along 685 they have resurfaced it
about 3 times now.

If you go view the Austin System on
http://www.radioreference.com/modules.php?name=RR&sid=48&d=&opt=all_tg
You will notice that they added towers in Uvalde and Eagle Pass (South Texas) and I am not understanding how that can be part of the Austin Radio system. They are calling it the Middle Rio Grande System.

Does this make any sense to anyone?
When I asked, the explanation I was give was that The information that we have is that these sites are actually a part of the 13E system (they are sharing network infrastructure). If you have confirmed information to the contrary, please let us know.

Can anyone explain this in more detail how an why these talkgroups need to be in Uvalde and Eagle Pass and why need to have their talkgroups.

This may the the same person who insisted Austin has APD Talk 1-44. which I have not heard referred to by any officers not have I seen it programmed into any radio. I think someone is trying to put a lot of bogus stuff in there to make it not correct but then again maybe I'm wrong.

Are VHF and 800 systems compatable?

Sharing towers happens all the time, but this seems to be a typo.
And the link for the Austin system (see below) is split and has the
LCRA link inside the Austin/Travis County link. Is is possible a
gremlin is loose in this newsgroup?

3439. Austin / Travis County / is now the Middle Rio Grande System ?????

Yahoo group: CenTexComm
Date: 2007-03-25 03:34:18 UTC
From: Trebor1159
Topic: 3435 Message: 3439

I referenced the wrong link for the Austin Travis Co System:
This is the correct one:
http://www.radioreference.com/modules.php?name=RR&sid=2

I am still not understanding it. I was told that they are sharing the same zone controller.(?) A trunked system can span multiple zones and locations, independent of frequency or band.

So..... a controller in Austin controls the system in Uvalde and Eagle pass? Are they paying rent for this?
Why would Austin and Eagle Pass and Uvalde all want to share the same system and more importantly, as a taxpayer,
am I paying for these systems in these other cities. Are the people in those cities paying for OUR system?
I'm still very confused. Why do these 3 cities need to be connected. I could see Austin, Williamson County and Bastrop sharing the same controller but why Austin and Eagle Pass and Uvalde. Who owns the system? Does that mean if they have a power outage in Eagle Pass, that the Austin System could crash?

I could totally understand if this was a DPS radio system and each city was all connected and all on one system, like TXU spans from North Texas down to Central Texas.

Could anyone else chime in on this with more explanation?

I can see it now, Some poor SAP goes into Radio Shack to get a radio programmed or they download it from Radio Reference and walk out with Uvalde and Eagle Pass repeaters programmed in. So if you hear new talkgroups on the system, they may not even be in this city.

3443. Middle Rio Grande System

Yahoo group: CenTexComm
Date: 2007-03-25 22:06:36 UTC
From: Glen Reid
Topic: 3443 Message: 3443

There seems to be a great deal of concern and consternation amongst the group regarding the connection of the MRGV radio system to the COA zone controller.

In fact, a Motorola Zone Controller can operate many zones (systems). It has been three years since I retired from M, but the numbers 16 and 64 sticks in my mind, perhaps more by now. I suspect the absolute number depends on the features and design of each system. It is Motorola's secret weapon (don't tell, anybody) for large, diverse system interoperability.

Eventually the MRGV system will encompass a number of other counties and cities along the border including Del Rio and perhaps Laredo. Federal agencies have expressed interest in coming on the system and may contribute federal frequencies for system use. That is part of the reason the system is VHF, not 800. The feds don't have any freqs at 800 MHz.

The idea is that redundant zone controllers at various locations will back up each other. Perhaps 3-5 in Texas, most likely operated by large cities which seem to have the staff and expertise for such things. With a proper IP back bone connecting these "control centers" any zone controller could monitor, supervise and take over the system operation of any other zone controller in network that failed. The IP back bone would be implemented by the state with each system user responsible for connection equipment, as the TLETS system is today.

Just as an example, a zone controller in Austin could normally operate zones in Austin, Waco, MRGV, Bryan-College Station, essentially DPS Regions 6, 7 and 8. That same zone controller could monitor and back up for systems in the Panhandle/Lubbock and Amarillo (DPS Region 5). Simultaneous, catastrophic failure of zone controllers in both locations is unlikely.

A Dallas (DPS Region 1) zone controller could be paired with San Antonio and south Texas (DPS Region 3); and, a zone controller in Houston/Beaumont (DPS Region 2) might back up West Texas covering El Paso and Midland (DPS Region 4).

A tertiary back up could support limited operation of any of the systems, should both primary and secondary zone controllers fail. After all, anything can fail.

The cost of the system will be shared on a subscriber basis, much like the current City of Austin/TC system now.

Obviously, systems that use both VHF and 700/800 will pose a problem in providing roaming service to units operating outside their home area. A statewide overlay of VHF and 700/800 common channels will provide roaming coverage. These might be either trunked or conventional channels depending on the traffic load in a given area. Remember, a trunking controller doesn't care what frequency the mobile are on, all it needs to know is with whom that mobile want to communicate and conventional patches are well proven technology. The "overlay" would seem to be a State responsibility. In fact, the overlay could be simply be an expansion of the P25, VHF system being implemented by DPS.

Some will question: "What about long distance, statewide coverage?" My answer is "WHY?" When was the last time the border patrol agent in Del Rio needed to communicate directly with the fire chief in Plano?

I realize that this concept does not address data, text messaging and Internet surfing. The City of Austin and Travis County are experimenting with commercial carriers for these services. It seems likely that Sprint and Cingular will have ubiquitous mobile data coverage, at DSL speeds long before public safety arrives at "Level 6" interoperability. I will be watching the COA/TC situation develop.

Locals, State, Feds, Trunking, Conventional, Ubiquitous coverage, Roaming, VHF, 700/800 MHz. this plan has it all, well except data (it can have status, SMS and GPS unit location).

I have tried present and explanatory note and a "vision of a concept" here. Ol' Glen's thoughts about how Texas public safety communication might (and should) go over the next decade. I have observed that this list has a number of folks who just like to argue about anything that comes along. As an old firefighter, I don't respond well to flames. Don't expect a response to any replies that are ignorant, idiotic, ill informed or inflamed. Clear, cogent, and well thought out comments are always welcome.

Glen,

Quote "Some will question: "What about long distance, statewide coverage?" My answer is "WHY?" When was the last time the border patrol agent in Del Rio needed to communicate directly with the fire chief in Plano?"

I think it's the other way around. What about the border patrol agent that is actually in Plano? He would want to talk to his base along the border. However, the other thing preventing that would be his VHF radio in 800mhz land. Or any number of units from all areas of the State descending on a disaster area, but their various radios not being able operate on the band supported in the area (VHF on the border, 800 MHz most places, 700 MHz coming up) - I'm referring to trunking only here, but even conventional interop freqs aren't in place everywhere.

Many years ago, I spoke with a Game Warden who said that with certain radios, those with a keypad (this was way back in the days when handheld radios were rare [supervisors had them and were usually kept on the desk, in a charger] and were only in vehicles), he could speak with any Game Warden in the state. All he had to do was key in certain tones, and the dispatcher(s) would connect the wardens along the system. This sounds like an improvement in the system.

Russell,

At 11:27 PM 3/26/2007, you wrote:

>Glen,
>
>Quote "Some will question: "What about long distance, statewide
>coverage?" My answer is "WHY?" When was the last time the border
>patrol agent in Del Rio needed to communicate directly with the fire
>chief in Plano?"

Perhaps I did not explain the roaming elements of the concept well enough.

Remember two things, (1) all mobiles will have common channels for it's particular band VHF or 700/800 MHz. (2) trunking controllers don't care what frequency a mobile is on, it just wants to know what talk group the mobile want to talk in to.

The various "systems" (as opposed to "zones") would included common channels. 700/800 areas (Metros) would have some VHF common channels (trunked or conventional) and VHF area systems (i.e. Panhandle, MRGV) would have some 700/800 common channels (maybe NPSPAC). So, VHF mobiles roaming into a 700/800 area would go to common VHF channels supported for VHF interop. 700/800 mobiles would be supported by common channel 700/800 infrastructure in VHF areas.

>I think it's the other way around. What about the border patrol agent that
>is actually in Plano? He would want to talk to his base along the border.

That is a good question.

In the case you mention, the border patrol system could be made capable of "follow-me" type auto registration on local systems. A trunking BP mobile travelling to Plano would be capable of registering onto a Dallas County system as a "Guest" on a common VHF control channel and via the IP backbone telling its home system in MRGV where it is. When his home talk group in MRGV gets a channel grant in Del Rio, the unit in Plano would be assigned to a BP VHF channel in Plano and be included in the conversation.

Frankly, I think this makes the system much more complicated than necessary. The BP unit in Plano will be in contact with the locals in Plano on interop VHF/700/800 connection. IF, the BP agent has an emergency, he/she will need help from the local police or SO, not his normal talk group back in Del Rio. This "follow me" feature would require a great deal of extra infrastructure and perhaps mobiles and portables with thousands of "Channels" or "Talk Group" for what I see

as chiefly, an administration function.

If an agency really needs this function, they would have to weigh the cost versus the benefits. Personally, I think cell phones would handle this situation much more economically.

When we sent EMT's to New Orleans for Katrina and East Texas for Rita, we lost communication with them locally, but they could talk to the locals on common channels (until their batteries ran down and could not be recharged due to the lack of AC power). No real utility or capability was lost.

I see your example not as a requirement, only a "nice to have" and a very expensive one.

>However, the other thing preventing that would be his VHF radio in 800mhz >land.

I hope the explanation above of how roaming would work answers that. There would be bidirectional patches or common talk groups between VHF and 700/800.

> Or any number of units from all areas of the State descending on a >disaster area, but their various radios not being able operate on the band >supported in the area (VHF on the border, 800 MHz most places, 700 MHz >coming up) -

I see most of the area of the state being VHF (South Texas, West Texas, MRGV, Panhandle) with 700/800 in metro areas.

Assuming the local RF infrastructure (repeaters and towers) is destroyed by the disaster, there is no solution to VHF/700/800 interop until back up, drop in, tactical interop RF facilities can be deployed.

>I'm referring to trunking only here, but even conventional >interop freqs aren't in place everywhere.

You are correct and trunking makes everything easier. 90% of this concept doesn't exist yet. But the seeds are planted.

I hold no illusions about this system concept, it has some limitations and would be pretty expensive. But, it is a way to provide ubiquitous Public Safety communications more interoperable, reliable and effective than other solutions being proposed.

From: ExLngHrn@aol.com
Topic: 3449 Message: 3449

Does anyone know anything about any P-25 Digital VHF frequencies in use in Blanco County? Supposedly, Blanco County is simulcasting on both digital and analog. Some public safety personnel in the county seem to have Motorola XTS-1500 digital handhelds.

Thanks
-Wes

I know 276.8 is a very interesting MOA/Range around Ft. Hood. I don't know how often it's used but I've heard some pretty interesting communications on it before. I think it is used more during exercises and war game type ops, but since I'm in Ft. Worth and might be missing most of the traffic, who knows?

BTW, 30.45 is another Ft. Hood Range Control frequency I can sometimes catch when the weather is right.

3456. Blanco P25

Yahoo group: CenTexComm
Date: 2007-04-02 11:14:19 UTC
From: Robert
Topic: 3456 Message: 3456

I listened to Blanco Co Sheriff this weekend on 154.755 (from Lago Vista) and they are certainly not P25

and my source pretty much confirms:
I am not aware of any Blanco county P25 in operation. Blanco county is in the process of adding some 800 NPSPAC conventional channels as part of a capcog funded grant, They have also way overspent on some absurd integrated siren box / mobile radios which might be p25 capable, but they would need to modify their analog licenses and purchase digital repeaters to utilize the feature and there are no known plans to do that.

If somebody has a particular frequency in mind, I can check it out. First they should check the FCC database for emissions. 20K0F3E, 16K0F3E, 11K0F3E are all analog emissions. Other emissions ending in D are often digital emissions, as in Digital P25. Also, it should be pretty obvious by listening to the repeater whether it is intelligible (i.e. analog) or unintelligible (i.e. DVP or digital). If it is unintelligible, a P25 scanner should be able to read it. If it is unintelligible and has a CTCSSS tone (most likely 151.4 in Blanco County) that would probably be DVP operating on an analog repeater. P25 has network access codes, which you would need a P25 service monitor (i.e. Aeroflex 2975) to be able to read the NAC.

That being said, we did have this discussion before involving DPS Troopers in Blanco Co and since they were not getting along with the SO, they were being dispatched by, Kerrville I belive. And the mobile repeater 159.2175 was being used I think.

AMERICAN-STATESMAN STAFF
Wednesday, April 11, 2007

Whether responding to a house fire or a major hurricane evacuation, emergency personnel will have something to say to each other.

But if each department uses a different radio system, talking to each other can be tricky or impossible.

The need for improved communication between different public safety agencies ? not just local police and fire but also departments statewide ? in the aftermath of Sept. 11, 2001, and hurricanes Katrina and Rita in 2005 has led communications directors across the state to form the Texas Radio Coalition.

Gov. Rick Perry announced the coalition's formation at a news conference this morning, surrounded by local, state and federal public safety officials.

"Radio interoperability gives those first responders . . . the immediate ability to communicate with one another at the scene of the disaster when minutes really matter," Perry said.

Currently, the state's emergency communications system is composed of a hodgepodge of local and regional systems purchased and operated by local agencies. Not all of the systems are compatible.

The coalition will research ways to make different radio systems work together and prioritize needs around the state, giving state officials a

guide to use when applying for federal grants to help coordinate Texas' radio network.

Congress approved $1 billion for states to use to improve emergency radio systems when they passed the Call Home Act of 2006.

Representatives from more than 16 agencies around the state, including those in Austin, San Antonio, Dallas, the Rio Grande Valley, and Harris, Travis and Williamson counties have joined the voluntary coalition chaired by Austin Chief Information Officer Peter Collins.

"We realize how important it is for the entire state, and you have to work as a team to accomplish it," Collins said.

This has been discussed a few times on the yahoo HoustonScan newsgroup (examples below).

Since this will be a government operation, well, we know what this means. A bunch of money spent to reinvent the wheel and ignore current products that work.

A similarly inexpensive product has been constructed and deployed in Tennessee.

Here are a couple of (edited) examples of the discussion that relate to an inexpensive solution:

http://groups.yahoo.com/group/HoustonScan/message/9794
HOUSTON CHRONICLE
SAT 08/13/05
Section: B
Page: 1 MetFront
Edition: 3 STAR

Working together gets easier for police / New radios let officers from different areas speak directly to each other

---

http://groups.yahoo.com/group/HoustonScan/message/6629

There was an article in the Chronicle recently stating "outer fringes" of HPD will integrate with STAR-NET by the end of 04. Homeland security grant will fund this.

The city is getting a federal grant to buy interoperability equipment. 3 of the Raytheon 1000's will be among the equipment purchased...

Gov is blowing smoke again. This has already been done statewide among all the COG's about two years ago. There were new frequencies set aside for mutal aid response's among all agencies statewide. You do not want the line personel to have the ability to communicate among different emergency groups. Supervisors only. Work the streets someday and you'll figure it out.

From: bpckty1
Topic: 3459 Message: 3464

"Gov is blowing smoke again"
True.

"Supervisors only"
Partially true. The use of the inteop frequencies should be assigned by supervisors/dispatch. But, most agencies have some interop capabilities now, Law 1, Law 2, Law 3 (some agencies, at this time), and interagency talkgroups/patches as are on Starnet.

Please note, with the "interop kit" that Sgt Casko has, it is to be used only by supervisors, as necessary. For example,this has been very helpful during some chases, so the agencies involved can, hopefully, coordinate actions. But, this being the real world, if more that two agencies are involved, its effectiveness is less. I monitored a chase that began in Pasadena (Pct 8 Constable area) that eventually involved several agencies (Starnet/UHF/VHF systems). Although it is available, no agency decided to use the Starnet-HPD link, and, of course, there was no VHF link at the time. Every agency stayed on their own agency/district frequency/talkgroup instead of switching to either a Tac talkgoup or HPD-1.

I hope something was learned about this, and the next time a wide area event occurs, they will use the resources available on Starnet (HPD-1)and hopefully, include Intercity 3/AKA Texas Law 1 on the system (See Bryan-Brazos County TRS for an example of this.) There are even 2 tgs named Pursuit 1 and Pursuit 2, which I have never heard used.(???????)

Rant Mode ON:
In other words, please quit the politics, my back yard syndrome, and use what is available, because when trouble happens, and it will (tornado season is beginning, hurricane season is a-commin', it floods often in the Hill Country, and who knows what else), every agency needs to be on the same page.

An imperfect example of this was when the evacuees from NOLA came to Houston. Starnet was used as primary since it had the resources (and we discovered new, unknown until then, talkgroups), and it put Sgt Casko's box to the test. Lessons were learned, and hopefully have been incorporated into the plans for future happenings.

I don't agree with supervisors only, but the do need to have their own private frequencies for coordination, but some frequencies/talkgroups have to be common, such as Law 1, so units that are on-scene can coordinate activities.

And, I have worked the streets. That's why other agency dispatch primaries, especially in your district, as well as TAC and Mutual Aid talkgroups are on the radio, so, for example, SO District 1 can talk with Constable 4, and SO District 4 can talk with Constables 4, 5, and 7.
Rant Mode OFF

My 2 cents worth.

Happy Scanning

Seems almost comical that this topic is being brought up (for the umpteenth time) in 2007.

Let's see. almost the same thing was said back in about 1971 or 72 as I recall. Yup that makes me a bit of an old timer.

That time around the COG's made a fairly wise decision with the old by today's standards of getting everyone on the same band (VHF-Hi) in place of the VHF-Low band. Then making a mutual pair of frequencies common among the entire system.

Worked pretty well even though city slickers still scoff at the idea. In fact in the rural hick towns its still working fairly well. But over the years that didn't seem good enough or whatever and the old Intercity pair just dropped over the edge of use. Bigger cities couldn't cope with VHF-Hi band and sooner than later the whole scheme of commonality just fell apart.

Fast forward to the 2000's and here we are "deja vu all over again" (to borrow a phrase from Yogi). The feds are now saying (with a good push from the radio mfg lobbyists) that everyone's gotta get new narrow band channels. Congress mandated this without even so much as a notion as what a frequency or channels is or was. That shoulda been left to the more technically inclined and trained to decide. Not politicos.

I'm with the concept, leave it to the "gummerment" and they will gum things up. Nothing's ever going to work perfect so why try.

My two cents,

Ken

Subject: [CenTexComm] Re:Texas Radio Coalition

Gov is blowing smoke again. This has already been done statewide among all the COG's about two years ago. There were new frequencies set aside for mutal aid response's among all agencies statewide. You do not want the line personel to have the ability to communicate among different emergency groups. Supervisors only. Work the streets someday and you'll figure it out.

From: Trebor1159
Topic: 3466 Message: 3466

Saturday evening, approx 8pm. Page on EMS county of an entrapment collision on FM1431 near Jonestown.
Jonestown PD responding on TCSO Adam (talkgroup). N Shore responding on 159.39 and on EMS County.
Jonestown PD was the first to arrive and gave scene size up to TCSO Adam dispatcher. (Austin EMS has the ability to monitor this talkgroup but doesn't) So N Shore Fire gets on scene and has to check out on both 159.39 and EMS County and give a size up to EMS. Austin EMS starts arriving and decide they need helicopters. STARflight is unavailable so they call Stat Air 461.25 and Air Evac 460.825. North Shore needs to get the road ready for 2 helos. Lago PD on 158.85 asks their dispatcher if they need any help. Lago PD has an 800 Mhz radio to talk to Travis Co on, but elects to call their dispatcher. Their dispatcher comes up and asks them if they need more units. Yes they do. Relayed back to Lago PD and they are enroute, but cannot talk to TCSO or Jonestown on the scene (their dispatcher can but he doesn't). DPS is also coming and on 154.68/155.46 Lago Arrives but isn't sure where to set up. Lago could even have switched over to talk to N Shore fire or EMS county but they don't. They finally determine where they are needed but can't talk to Jonestown or TCSO. Helos are on their way. they are given Intercity mobile 154.95 as the frequency to coordinate on. N Shore is on there talking them in. But the helos are talking to each other on 123.025 while enroute. Helos finally arrive and the patients are loaded and transported. DPS does not have Austin system and cannot talk to TCSO.
2 helos, 2 ambulances, 2 EMS supervisors, 2 Lago PD, at least 1 DPS, 1 Jonestown PD, 2 or more TCSO, multiple N Shore units and first responders. that's a bunch of frequencies and a bunch of talkgroups to monitor.

Is this what the governor is talking about?
Could some of these freqs/talkgroups be simulcasted?
Would it solve a lot of problems if they did what it took Williamson Co years to figure out, to create "scene" or "helo" talkgroups so everyone could be on the same channel.
Intercity could be linked to a talkgroup on the Austin TRS.

One of the things we have allowed our governments to do, big and small, is control their little domains. Each and everyone have to have control of all they can, be it radios or taxes. No one wants to let go and we let them get by with this. Many years ago Denver and I think Arapaho County combined all their services into one. Amazing. St Louis has 96 cities surrounding it and guess what. Yep, very few work together. Metro (the bus folks) here in Houston have two radio system, one for the choo choo train and another for the bus system. Yep, they can't talk to each other. The dispatchers do sit near each other so it's ok.

The Harris County STARNET (Motorola) system is working very well and almost everyone within seven or nine counties have something or everything on that system. Houston ISD will be on in the very near future. Houston PD and FD are still holdouts but the supervisors have radios on the STARNET system. Even the Feds are have something on the system. It does have digital capability and some day will be but not yet.

The new narrow band mandate was requested by, you guessed it, all the little municipalities that want their own radio system. Narrow band - more frequencies. Homeland security you know.

Scott & White launches new EMS service
Austin Business Journal - 2:24 PM CDT Monday, May 7, 2007

Scott & White Hospital is forming a new company with Michigan-based Community EMS to operate its emergency medical services operations.
Scott & White will possess majority ownership while Community EMS oversees management and billing for the new operation. Previously, Scott & White's pre-hospital services department had been running the hospital system's ambulance operations.
Scott & White CEO Donny Sequin says the hospital will retain current EMS employees with no changes in salaries or benefits. The pre-hospital services department has about 90 employees.
"We have been exploring options with our ambulances for months," says Sequin. "The expertise Community EMS brings to the table will strengthen our efficiencies while maintaining our well-regarded ambulance operations in the communities we serve."
Temple-based Scott & White has increased its Austin-area presence recently with construction of a new 72-bed hospital at the University Medical Campus in Round Rock, which is scheduled to open in July.

From: jnnds
Topic: 3477 Message: 3477

I bought a Pro-97 last month but unfortunately need some cash in hand so the 97 must go. With it comes 4 rechargable AA batteries and the charger (both RS brand), and a car power adapter. I payed $260 for all of it last month but I will let it all go for $150. I do NOT have the boxes for any of it but do have the instruction manual for the 97. I have only used it a handful of times over the last month while at work or on the way home.

If you are interested please email me @ jandes@... or call me @ 512-590-1453. (if I don't answer just leave me a message. I will be in meetings off and on all day)

Thanks, Jon

Cedar Park PD has been radaring 183A big time.. they hide next to an
unused toll booth lane.
and DPS Is all over Loop 1 and Hwy 45 and 130.

Same frequencies for DPS and same talkgroups for Cedar Park.

3480. This may be old news to some...

Yahoo group: CenTexComm
Date: 2007-06-04 19:44:10 UTC
From: Glenn Morris
Topic: 3480 Message: 3480

Gathered from other lists:

Here is a list of various F. B. I., Department of Justice and Department of Homeland Security VHF frequencies. In a post to come he will detail the UHF frequencies. This is a list of frequencies that the author KNOWS to be correct. Some of them have been in use for over 20 years.

Most communications are now handled by a cell type telephone system that functions with satellite and ground repeaters. These frequencies mesh with cell, 3G, and Nextel frequencies. They act much like the Nextel System, which is quite interesting considering that Nextel itself was designed just for that use. They just did not get the contract. Nextel was left with a functioning network that had to go "Public" or crash, the rest is History.

The below lists of frequencies are transmitted with a CTCSS tone of 167.9 Hz.

These frequencies are generally used when you observe an agent with two-way radio. The following are Low-Band VHF frequencies that are used for convoys, vehicle tracking, aerial tracking, long distance radio surveillance, and general station to station communications. (i.e. Command Post to Command Post)

The below frequencies are the hardest to monitor.

32.7500
36.0700
40.2200 Shared w/military
40.8600
41.9700

The frequency 122.9000 AM is used for Aircraft Hi-Jack negotiations.

The frequencies 156.3900 , 156.5700 (liaison w/ Coast Guard) and 156.6900 are used when working with the Coast Guard and when working inland lakes.

The following is a list of VHF FM frequencies. There are many, try not to be discouraged by the number. Much of what is here is simplex. Consider them simplex frequencies unless otherwise indicated. This is actually much easier to monitor. Expect to hear both Digital Voice Protocol and Pulse oriented scrambling as well as clear voice radio traffic. I have noticed that when the SHTF with these guys they do not bother to scramble. You may hear nothing for some while or until a bank robbery or such occurs in your area. Then suddenly they get hot!

162.3750 liaison w/Secret Service
162.6375

162.6500 Area repeaters, some call it "Box Car"
162.6625
162.6750
162.6875
162.7000

167.7375
167.7500
167.7625
167.7750
167.7875 Many City repeaters including Chicago, Denver
168.2000 U.S. Secret Service
168.5250 V.A.
168.6250 U.S Agriculture Department, ENFORCEMENT
168.7850 White House Staff
169.3750 F.A.A., tower wind indicators heard here
169.6100 U.S. Secret Service
169.8500 Postal Inspectors
169.9250 U.S. Secret Service

The following is a list of dual use frequencies. These frequencies are used for two-way communication and BODY MICROPHONE SYSTEMS. More often these listed below are some type of voice operated transmitter that may be key by sound or not. These frequencies are assigned to the FBI under various call

signs and cities. It seems that the Origin City does not make any difference. So it varies from place to place.

170.0000
170.7000
170.8000
170.8250
170.8500
170.9000
171.3500

Here is a list of commercial body microphone and bug frequencies on VHF; most can be purchased at any sound store or on the Internet. I have had many reports of Federal Agencies using these frequencies after hastily purchasing a commercial device.

165.9125
166.3375
167.3375
167.3425
167.4875
168.0115
169.2000
169.4450
169.5050 most "cheaper" units here
170.2450
170.3050
171.0450
171.1050
171.4500
171.8450
171.8500
171.9000
171.9050
172.0000
172.2000
172.3375
172.3750
174.6000
177.6000
181.6000
183.6000
186.0000
190.6000
192.6000
195.6000
196.6000
199.6000

These frequencies are presented for your monitoring enjoyment only. It is not my intent to present these frequencies for malicious use.

Topic: 3481 Message: 3481

City takes input on public safety

Austin residents will have a chance to register their opinions about public safety and police services through June 30 as part of the city's new Austin Listening program.

Between now and the end of the month, people can phone in their thoughts to 391-0800 or (877) 822-7922, send an e-mail to austinlistening@... or submit comment cards at boxes across the city, including at City Hall.

Officials will host a public forum for people to share their thoughts about police and public safety at City Hall from 9 a.m. to 6 p.m. June 30. Austin Listening is part of an outside audit of the city's public safety agencies, which has been going on for months.

Suggested topics:
Shutting down the freeway for hours for collisions with no provisions to keep traffic moving on side roads.
APD's Air 1 flying around for fun. Not really taking calls and not being used to spot traffic problems in rush hour.
EMS sending multiple units to a single patient call and then running out of ambulances and having calls "not yet assigned".
EMS toys (inflatable boats, jet skis, large command trailers) that have never been used and no money to staff them.
Having an expensive digital trunked radio system that was supposed to promote co-ordination, yet agencies still cannot or will not talk to each other.

3483. City Ordinance regarding Towers

Yahoo group: CenTexComm
Date: 2007-06-18 23:20:59 UTC
From: Tommy
Topic: 3483 Message: 3483

I wanted to bounce this off everyone's head and ask what your opinion and what would you do about this?

I am wanting to place a VHF/UHF HAM radio repeater at my house in the city of Round Rock. This repeater would have the capability to link to other repeaters, echolink (computer based linking), and weather related annoucements with computer programing. I am in the process of buying some Rohn 25 tower and want to put about 50-60 foot of tower up for these repeaters. I live in a subdivision which the only deed restrictions are city ordinances per the information officer. They state this because the current homeowner's association does not have the power to enforce rules unless a home owner takes another home owner to court, thus they have adopted city ordinances so the city would take care of violators. I contacted the city, and initially i got the run-a-round of calling city code enforcement office, building official's office, and the zoning coordinator's office. Now, they are staying that i am not allowed to place a tower at my residence for zoning issues. I faxed over information pertaining to the FCC rules/regulations part 97.15 Station antenna structures which states (state and local) regulation of a station antenna structure must not preclude amateur service communications. Rather if must reasonably accommodate such communications and must constitute the minimum practicable regulation to accomplish the state or local authority's legitimate purpose. I also faxed over PRB-1 which summurized this policy. But they called me today and stated that the zoning coordinator adamately said "no" to my arguement. I further argued the facts pertaining to these policies and the gentleman told me that he would talk to the zoning coordinator again and will consult the city attorney. Where do i go from here if/when they tell me no? One suggests that i build the tower, which i am choosing to be about 50-60 feet tall and to make sure it is properly guy'd and grounded. Once the city issues me a citation to take it to court with the above mentioned federal polices and have the judge dismiss it.

Has anyone else had a simuliar issue with a city/municipality? If so, what did you do and what was the outcome?

Thanks for your time in reading this and your comments.

Tommy Taylor KC5UJH

I would recommend that you send a copy of all this information to the ARRL and see what help that they might be able to give you. One thing I have learned that when you want to do something Armature Radio related, i.e. Antennas and Towers people have very little knowledge about it and assume the worst.

I wish you great access

Tommy, the Central Texas DX & Contest Club web site has a section on
local regulations that may help. Go to
http://www.ctdxcc.org/ and then click on the link for Local Regs on the
left side of the page.

Good luck and 73,

Thanks for all the info! That website was useful in comparing
surrounding ordinances to Round Rock's. Thanks again!

This was on today's City Council agenda...

Approve a resolution authorizing application for grant funds from the U.S. Department of Justice, Office of Community Oriented Policing Services to purchase radio system infrastructure and subscriber radio equipment to expand the Austin/Travis County Regional Radio System to the City of Lockhart and Bastrop County.

There's more. This off the city council website:

Approve a resolution authorizing application for $6,000,000 in grant funds from the U.S. Department of Justice, Office of Community Oriented Policing Services to purchase radio system infrastructure and subscriber radio equipment to expand the Austin/Travis County Regional Radio System to the City of Lockhart and Caldwell, Bastrop, and Lee Counties. Funding is available from the Fiscal Year 2007 COPS Technology Program for the grant period of September 1, 2007 to August 30, 2009. A cash match of $2 million is required and will be provided by the participating counties.

The total of 8 million might seem low for an expansion of that size, but there are already multiple functioning 800 trunk towers in those counties listed. Pretty much an upgrade to digital repeaters and site controllers and field radios. I would imagine that site leases, tower builds and such would put that figure much higher.

********** See what's free at http://www.aol.com.

Wonder why Austin city council was approving something that affects a
town down in Caldwell county. Seems like a job for the Lockhart folks.

More important ... what's Aaron Slaughter got to say on this - since
Lockhart is his backyard - so to speak.

Rick,

You beat me too it. I was just in the process of replying....

See this article in the Lockhart Post-Register...

http://www.post-register.com/index.php?Name=ViewNews&ID=1437

I certainly do not consider myself a communications expert in any way, but thats journalism for you. I am merely the Communications Coordinator for the City of Lockhart.

Austin invited several surrounding counties to partner in the application for this grant to help them upgrade communications equipment to meet the state interoperability needs. There were several counties involved in the beginning, but now it's down to 2 entites, the City of Lockhart and Bastrop County (pending Commissioners court tomorrow morning)

This is the same grant that Williamson County partnered with Austin Police Department and recieved $6 Million 2 years ago. You can find more information about the grant at http://www.cops.usdoj.gov/Default.asp?Item=240#TECH

Good info. Thanks. I'll have to bug you later with questions on how many radios will have to be replaced (eg. can't be reprogrammed).

Caldwell County does not have as large a tax base as neighboring counties so it is no surprise they opted out of participating with the necessary matching funds.

And for the record ... in Lockhart ... you ARE the comm expert (and they're lucky to have you). :-)

3493. extended the TRS to Lockhart and EMS Staging at Juneteenth

Yahoo group: CenTexComm
Date: 2007-06-22 13:54:24 UTC
From: Robert
Topic: 3493 Message: 3493

I wonder why the Austin taxpayers are funding the Trunked Radio System to extend to Lockhart and Caldwell Co, much less Eagle Pass and Del Rio?. Shouldn't they pay for their own system? Why hasn't the media gotten a hold of this?

Also I wonder if it will come up that although this wonderful radio system we have, allows EMS to be on the APD talkgroups to get direct contact with officers on the scene while they are staging outside a Juneteenth celebration, EMS policies prohibit EMS from talking to APD or even being on their talkgroups. So precious seconds and even minutes are lost when APD has to tell their dispatcher that EMS is cleared to enter, and that dispatcher has to send a text message to EMS Comm, and EMS Comm has to read the txt message and then tell the unit that they are cleared to enter. Seems like it could all be done with direct "on scene" communications. That's the main reason they paid all this money for a system that would allow agencies to communicate with each other. Multiply that by something like 911 where the building is about to collapse and the other agencies do not get the word in time. Have we made any improvements since then? Doesn't sound like it. All the hardware is in place and it works fine. You just gotta train the people on how to use it.

3495. P25 in Williamson County

Yahoo group: CenTexComm
Date: 2007-06-25 06:30:05 UTC
From: Rick Parrish
Topic: 3495 Message: 3495

Am I the only one that notices these things? :-)

One of the control channel frequencies from the Williamson County
Motorola system is now broadcasting a P25 control channel.

857.9625

So far ... control channel only - no voice traffic.

Several other voice channels from the Motorola system do not appear in
the rotation of voice calls on the Motorola system.

From the control channel dump ...

WACN, system id, site number and active control channel:

3B 00 00 BE E0 91 3E 04 59 70 F6 3C Network Status Broadcast Mfg 00
LRA 00 WACN BEE09 Sys 13E channel 0-459(857.96250)(data,voice,registration)
-BA 00 00 11 3E 01 14 04 59 70 6F D3 RFSS Status Broadcast Mfg 00 LRA
00 Sys 13E Sub 01 Site 14 channel 0-459(857.96250) (data,voice,registration)

Available band plans:

From: Myles Barkman
Topic: 3495 Message: 3496

I see that 866.2875 is Austin/TCo Simulcast 1 tower and 866.1375 is
Austin/TCo Simulcast 2.
Guess that system is expanding. I'm used to that sort of stuff. :)

Myles
